the timely delivery of a fully functioning services installation Beyond the normal considerations of time cost and quality building services have a series of unique requirements not normally considered For the first time these unique requirements are combined in a single text providing the reader with the definitive guide to building services procurement The text reviews each of the major critical success factors and clearly explains the supporting processes that must be enacted to ensure success It reviews the general nature of procurement systems and construction projects and then explores the increasing importance that building services play both in the construction process and in determining success for the client Each significant stage within the procurement process is explored by explaining its importance and showing what decisions need to be made to develop a cohesive strategy It concludes by giving a step by step guide to clearly develop and implement a building services procurement strategy ARGE - Construction Partnership in Germany: Legal Issues in Cooperation of <u>Different Engineering Firms</u> Kenan Kaya,2013-05-21 This survey investigates and evaluates the legal framework which an engineer faces when stepping into an ARGE partnership with other planning offices ARGE in the German construction industry an established form of partnership becomes more and more important in acquiring and accomplishing construction projects The ARGE underlies the regulations of the German Partnership under Civil Law consequently the ARGE partners are jointly and individually liable for the contract Thus the principal of the overall project enjoys fundamental advantages He reduces his risk should it come to an insolvency of an ARGE partner he increases competition and he gets services out of one hand Engineering firms who want to participate in these projects have to handle their capacities and risks Presently many engineering firms are not interested in participating in ARGE partnerships as they see no reason for a voluntary sharing of liability and want to be responsible and liable only for services they performed Therefore engineering firms are interested in an ARGE agreement which divides the responsibilities and liabilities in consideration of the rendered services In external discussions with principals ARGE partner could not change the joint and individual liability Principals will not deal with the limitation of ARGE partners liabilities However other regulations could be defined in internal arrangements Besides the law related aspects it is advisable to redefine other regulations in the ARGE agreement Partners for example should define a fulfillment obligation In case of insolvency of one partner the other partners still have to fulfill the contract If there are services which they cannot carry out by themselves they have to involve other partners Construction 2 Alan V.
