The Mechanization Of The World Picture Pythagoras To Newton:

De Mechanisering Van Het Wereldbeeld Eduard Jan Dijksterhuis, 1961 The Description for this book The Mechanization of the World Picture Pythagoras to Newton will be forthcoming **The Mechanization of the World Picture** Eduard J. Dijksterhuis, 1964 The Mechanization of the World Picture Eduard Jan Dijksterhuis, 1969 **The Scientific Revolution** Steven Shapin, 2008-04-15 There was no such thing as the Scientific Revolution and this is a book about it With this provocative and apparently paradoxical claim Steven Shapin begins his bold vibrant exploration of the origins of the modern scientific worldview Shapin s account is informed nuanced and articulated with clarity This is not to attack or devalue science but to reveal its richness as the human endeavor that it most surely is Shapin s book is an impressive achievement David C Lindberg Science Shapin has used the crucial 17th century as a platform for presenting the power of science studies approaches At the same time he has presented the period in fresh perspective Chronicle of Higher Education Timely and highly readable A book which every scientist curious about our predecessors should read Trevor Pinch New Scientist It s hard to believe that there could be a more accessible informed or concise account of how it the scientific revolution and we have come to this The Scientific Revolution should be a set text in all the disciplines And in all the indisciplines too Adam Phillips London Review of Books Shapin s treatise on the currents that engendered modern science is a combination of history and philosophy of science for the interested and educated layperson Publishers Weekly Superlative accessible and engaging Absolute must reading Robert S Frey Bridges This vibrant historical exploration of the origins of modern science argues that in the 1600s science emerged from a variety of beliefs practices and influences This history reminds us that diversity is part of any intellectual endeavor Choice Most readers will conclude that there was indeed something dramatic enough to be called the Scientific Revolution going on and that this is an excellent book about it Anthony Gottlieb The New York Times Book Review **Towards Cultural Psychology of Religion** Jacob A. v. van Belzen, 2010-08-03 The aims pursued in this book are quite modest The text is not an introduction in the traditional sense to any psychological subdiscipline or field of application nor does it present anything essentially new Rather it shows work in progress as it attempts to contribute to an integration of two differently structured but already existing fields within psychology In order to explain this it is probably best to say a few words about how the book came into being and about what it hopes to achieve As a project the volume owes very much to others While lecturing in places ranging from South Africa to Canada and from California through European countries to Korea colleagues have often urged me to come up with a volume on cultural psychology of religion For reasons that should become clear in the text I feel uncomfortable with such a demand To my understanding there exists no single cultural psychology of religion Rather there are ever expanding numbers of divergent types of psychologies some of which are applied to understanding religious aspects of human lives or to researching specific religious phenomena while others are not Within this heterogeneous field that is correctly or not still designated as

psychology there are also many approaches that are sometimes referred to as cultural psychology or as culturally sensitive psychologies It would be wor while applying many of these to research on religious phenomena but at present not too many are in fact so applied

Reformed Theology and Evolutionary Theory Gijsbert Van den Brink, 2020-02-25 Many books aim to help beginners explore whether or not evolutionary science is compatible with Christian faith This one probes more deeply to ask What do we learn from modern evolutionary science about key issues that are of special theological concern And what does Christian theology especially in its Reformed expressions say about those same key issues Gijsbert van den Brink begins by describing the layers of meaning in the phrase evolutionary theory and exploring the question of how to interpret the Bible with regard to science He then works through five key areas of potential conflict between evolutionary theory and Christian faith spelling out scientific findings and analyzing Christian doctrinal concerns along the way His conclusion although some traditional doctrinal interpretations must be adjusted evolutionary science is no obstacle to classical Christian faith

Risk, Uncertainty and Rational Action Carlo C. Jaeger, Thomas Webler, Eugene A. Rosa, Ortwin Renn, 2013-11-05 Risk as we now know it is a wholly new phenomenon the by product of our ever more complex and powerful technologies In business policy making and in everyday life it demands a new way of looking at technological and environmental uncertainty In this definitive volume four of the world s leading risk researchers present a fundamental critique of the prevailing approaches to understanding and managing risk the rational actor paradigm They show how risk studies must incorporate the competing interests values and rationalities of those involved and find a balance of trust and acceptable risk Their work points to a comprehensive and significant new theory of risk and uncertainty and of the decision making process they require The implications for social political and environmental theory and practice are enormous Winner of the 2000 2002 Outstanding

Publication Award of the Section on Environment and Technology of the American Sociological Association *Science and the Good* James Davison Hunter, Paul Nedelisky, 2018-10-23 Why efforts to create a scientific basis of morality are neither scientific nor moral Important and timely The Wall Street Journal In this illuminating book James Davison Hunter and Paul Nedelisky trace the origins and development of the centuries long passionate but ultimately failed quest to discover a scientific foundation for morality The new moral science led by such figures as E O Wilson Patricia Churchland Sam Harris Jonathan Haidt and Joshua Greene is only the newest manifestation of that quest Though claims for its accomplishments are often wildly exaggerated this new iteration has been no more successful than its predecessors But rather than giving up in the face of this failure the new moral science has taken a surprising turn Whereas earlier efforts sought to demonstrate what is right and wrong the new moral scientists have concluded ironically that right and wrong don't actually exist Their perhaps unwitting moral nihilism turns the science of morality into a social engineering project If there is nothing moral for science to discover the science of morality becomes at best a feeble program to achieve arbitrary societal goals Concise and rigorously argued *Science and the Good* is a definitive critique of a would be science that has gained extraordinary influence in public discourse today and an exposé of that project's darker turn *Science and the Good* is a closely argued always accessible riposte to those who think scientific study can explain improve or even supersede morality A generous and thoughtful critique The Daily Telegraph *Space and Political Universalism in Early Modern Physics and Philosophy* Pablo Bustinduy, 2024-03-05 How did early modern philosophy of space shape the modern concept of political universalism In this book Pablo Bustinduy persuasively argues that political universalism emerged from both the developments of Newtonian science and the formulation of the modern philosophy of the State In the metaphysics of an open empty abstract and absolute space Bustinduy suggests the universalist project of modern politics found its logical model and foundation There the anxiety of a dislocated world was overcome and the ontology of modern physics found a specific political expression that despite being besieged by multiple crises still animates our political imagination By offering a political reading of early modern philosophy of space *Space and Political Universalism in Early Modern Physics and Philosophy* reveals the connections between the logical development of early modern science the contemporary elaborations of the philosophy of the State and the historical articulations of the Westphalian system early capitalist social formations and the European colonial project In doing so it offers a powerful reflection on how we might detach democracy from the perilous metaphysics of infinite space that has engendered political violence and domination positing space as an emptiness that prevents the closure of the political itself

[International Handbook of Research in History, Philosophy and Science Teaching](#) Michael R. Matthews, 2014-07-03 This inaugural handbook documents the distinctive research field that utilizes history and philosophy in investigation of theoretical curricular and pedagogical issues in the teaching of science and mathematics It is contributed to by 130 researchers from 30 countries it provides a logically structured fully referenced guide to the ways in which science and

mathematics education is informed by the history and philosophy of these disciplines as well as by the philosophy of education more generally The first handbook to cover the field it lays down a much needed marker of progress to date and provides a platform for informed and coherent future analysis and research of the subject The publication comes at a time of heightened worldwide concern over the standard of science and mathematics education attended by fierce debate over how best to reform curricula and enliven student engagement in the subjects There is a growing recognition among educators and policy makers that the learning of science must dovetail with learning about science this handbook is uniquely positioned as a locus for the discussion The handbook features sections on pedagogical theoretical national and biographical research setting the literature of each tradition in its historical context It reminds readers at a crucial juncture that there has been a long and rich tradition of historical and philosophical engagements with science and mathematics teaching and that lessons can be learnt from these engagements for the resolution of current theoretical curricular and pedagogical questions that face teachers and administrators Science educators will be grateful for this unique encyclopaedic handbook Gerald Holton Physics Department Harvard University This handbook gathers the fruits of over thirty years research by a growing international and cosmopolitan community Fabio Bevilacqua Physics Department University of Pavia *A History of Optics from Greek Antiquity to the Nineteenth Century* Olivier Darrigol, 2012-01-26 This book is a long term history of optics from early Greek theories of vision to the nineteenth century victory of the wave theory of light It shows how light gradually became the central entity of a domain of physics that no longer referred to the functioning of the eye it retraces the subsequent competition between medium based and corpuscular concepts of light and it details the nineteenth century flourishing of mechanical ether theories The author critically exploits and sometimes completes the more specialized histories that have flourished in the past few years The resulting synthesis brings out the actors long term memory their dependence on broad cultural shifts and the evolution of disciplinary divisions and connections Conceptual precision textual concision and abundant illustration make the book accessible to a broad variety of readers interested in the origins of modern optics **The Rise of Modern Science Explained** H. Floris Cohen, 2015-09-24 For centuries laymen and priests lone thinkers and philosophical schools in Greece China the Islamic world and Europe reflected with wisdom and perseverance on how the natural world fits together As a rule their methods and conclusions while often ingenious were misdirected when viewed from the perspective of modern science In the 1600s thinkers such as Galileo Kepler Descartes Bacon and many others gave revolutionary new twists to traditional ideas and practices culminating in the work of Isaac Newton half a century later It was as if the world was being created anew But why did this recreation begin in Europe rather than elsewhere This book caps H Floris Cohen s career long effort to find answers to this classic question Here he sets forth a rich but highly accessible account of what against many odds made it happen and why **Intuition, Imagination, and Philosophical Methodology** Tamar Szabó Gendler, 2013-07-18 Tamar Gendler draws together in this book a series of essays

in which she investigates philosophical methodology which is now emerging as a central topic of philosophical discussions. Three intertwined themes run through the volume: imagination, intuition, and philosophical methodology. Each of the chapters focuses in one way or another on how we engage with subject matter that we take to be imaginary. This theme is explored in a wide range of cases including scientific thought experiments, early childhood pretense, thought experiments concerning personal identity, fictional emotions, self-deception, Gettier cases, and the general relation of conceivability to possibility. Each of the chapters explores in one way or another the implications of this for how thought experiments and appeals to intuition can serve as mechanisms for supporting or refuting scientific or philosophical claims. And each of the chapters self-consciously exhibits a particular philosophical methodology that of drawing both on empirical findings from contemporary psychology and on classic texts in the philosophical tradition, particularly the work of Aristotle and Hume. By exploring and exhibiting the fruitfulness of these interactions, Gendler promotes the value of engaging in such cross-disciplinary conversations in illuminating philosophical issues.

The Racial Discourses of Life Philosophy Donna V. Jones, 2010-03-05

In the early twentieth century, the life philosophy of Henri Bergson summoned the *elan vital* or vital force as the source of creative evolution. Bergson also appealed to intuition, which focused on experience rather than discursive thought and scientific cognition. Particularly influential for the literary and political New Criticism movement of the 1930s, which opposed French colonialism, Bergson's life philosophy formed an appealing alternative to Western modernity, decried as mechanical, and set the stage for later developments in postcolonial theory and vitalist discourse. Revisiting narratives on life that were produced in this age of machinery and war, Donna V. Jones shows how Bergson, Nietzsche, and the poets Leopold Senghor and Aimé Césaire fashioned the concept of life into a central aesthetic and metaphysical category while also implicating it in discourses on race and nation. Jones argues that twentieth-century vitalism cannot be understood separately from these racial and anti-Semitic discussions. She also shows that some dominant models of emancipation within black thought become intelligible only when in dialogue with the vitalist tradition. Jones's study strikes at the core of contemporary critical theory, which integrates these older discourses into larger critical frameworks, and she traces the ways in which vitalism continues to draw from and contribute to its making.

Antiquity and Capitalism John R. Love, 2005-09-27

This ambitious book addresses questions concerning an old theme: the rise and fall of ancient civilization, but does so from a distinctive theoretical perspective by taking its lead from the work of the great German sociologist Max Weber.

Reinventing Religious Studies Scott S. Elliott, 2014-10-20

Reinventing Religious Studies offers readers an opportunity to trace the important trends and developments in Religious Studies over the last forty years. Over this time, the study of religion has been transformed into a critical discipline informed by a wide range of perspectives from sociology to anthropology, politics to material culture and economics to cultural theory. Reinventing Religious Studies brings together key writings which have helped shape scholarship, teaching, and learning in the field. All the essays are drawn from the CSSR.

Bulletin a provocative occasionally irreverent and always critical journal which has long been at the centre of debates in Religious Studies This collection will prove invaluable for students and scholars of theory and method in Religious Studies It offers readers a unique opportunity to understand the history of key issues in the study of religion and what remains central to the study of religion today Descartes's Imagination Dennis L. Sepper,1996-01-01 A work of major importance for the interpretation of Descartes s development and for the understanding of the function of the imagination in Descartes s early works Descartes s Imagination will be a must in Descartes and imagination studies It is long overdue Eva T H Brann author of The World of Imagination Sum and Substance A significant contribution to our understanding of the development of Descartes s philosophy William R Shea author of The Magic of Numbers and Motion The Scientific Career of Rene Descartes

Physiologia Dennis Des Chene,2018-08-06 Sixteenth century Aristotelianism was the culmination of four centuries of commentary and criticism Physiologia is one of the first books to provide an accessible and comprehensive guide to that tradition in natural philosophy In an incisive and readable treatment Dennis Des Chene illuminates the continuities and disruptions between medieval and modern philosophy and promotes a new understanding of the philosophical setting in which modern notions of science emerged
