Studies in Medieval Science and Natural Philosophy Edward Grant, 1981 The Relationship of Medieval Natural Philosophy to Modern Science James Athanasius Weisheipl, 1976 On the Threshold of Exact Science Annelise Maier, 2016-11-11 Translated into English for the first time the writings of the twentieth century scholar Annelise Maier on late medieval natural philosophy are here made accessible to a broader audience The seven selections represent both Maier s earlier and later works Her perceptions as a trained philosopher coupled with her familiarity with the full range of primary source material result in these rare insights into the historical importance of medieval science Varieties of Necessity in John Buridan Guido Alt, 2023 Medieval Cosmology Pierre Duhem, 1987-08-15 These selections from Le syst me du monde the classic ten volume history of the physical sciences written by the great French physicist Pierre Duhem 1861 1916 focus on cosmology Duhem's greatest interest By reconsidering the work of such Arab and Christian scholars as Averroes Avicenna Gregory of Rimini Albert of Saxony Nicole Oresme Duns Scotus and William of Occam Duhem demonstrated the sophistication of medieval science and cosmology The Metaphysical Foundations of Natural Science Immanuel Kant, 2015-06-12 Metaphysical Foundations of Natural Science is a 1786 book by Immanuel Kant The book is divided into four chapters The chapters are concerned with the metaphysical foundations of phoronomy kinematics dynamics mechanics The Rise of Mechanism in 14th Century Natural Philosophy Ernest Addison Moody, 1950 and phenomenology

Science and Medieval Thought T. Clifford Allbutt, 2023-08-05 Science and Medieval Thought a classical book has been considered important throughout the human history and so that this work is never forgotten we at Alpha Editions have made efforts in its preservation by republishing this book in a modern format for present and future generations. This whole book has been reformatted retyped and designed These books are not made of scanned copies of their original work and hence the text is clear and readable Universal Natural History and Theory of the Heavens Immanuel Kant, 2008-07-31 Immanuel Kant 1724 1804 published The Universal Natural History and Theory of Heaven in 1755 This English text is based on Georg Reimer's edition of the complete works of Immanuel Kant 1905 The translation was first completed and posted on the web in 1998 It has been considerably revised for this September 2008 version mainly to improve the accuracy and fluency of the translation Translator s note Knowledge and Cosmos Robert K. DeKosky, 2023-10-10 In Knowledge and Cosmos Development and Decline of the Medieval Perspective 2nd Edition Robert K DeKosky focuses on issues in astronomy cosmology physics matter theory philosophy and theology vital to the Copernican Revolution This book describes efforts among individuals advocating different world views to fit new ideas compatibly into broad perspectives reflecting four traditional patterns of interpretation teleological mechanical occultist and mathematico descriptive These four modes had guided medieval accounts of heavenly phenomena material process and motion The teleological explanation prevalent in Aristotle's natural philosophy posited final causes ends or goals toward which objects strove or attempted to become Ancient

classical atomists had emphasized strictly mechanical explanations invoking direct material contact and collision of moving matter as agents of physical change Traditions of astrology magic and alchemy embraced an occultist pattern of interpretation citing hidden forces opaque to both sensual detection and rational understanding as explanations of various phenomena Finally the mathematico descriptive approach interpreted natural phenomena according to geometric or arithmetic relationships unlike the other three this did not involve causal explanation of a process Part I discusses development of the four patterns in the ancient period and their uneasy medieval relationships with each other and with basic Judaeo Muslim Christian exigencies of faith Theory of the heavens follows including the mathematico descriptive approach of Ptolemaic astronomy the teleological and mechanical cosmology of Aristotle and occultist interpretations of astrologers and magicians Part I then turns to matter and materiality discussing differences among the mechanical philosophy of classical atomism teleological emphases in Aristotle's material theory and occultist assumptions of some alchemists Finally Part I analyzes conceptions of motion focusing on Aristotelian interpretations and critical commentaries thereon during the Middle Ages Part II relates struggles of leading early modern figures to adapt new concepts e.g. Copernicus heliocentric astronomy cosmology Galileo s inertial theories of motion and Kepler s elliptical planetary orbit to an allegiance to two or more of the four patterns of interpretation By this approach it identifies decreasing dependence on teleological explanation of physical phenomena as crucial to decline of medieval interpretations of those phenomena followed by rejection of teleology in the natural philosophy of Descartes and subsequent fruitful confluence of the mechanical mathematico descriptive and occultist patterns in the physics and cosmology of Isaac Newton Knowledge and Cosmos Robert K. DeKosky, 2023-10-10 In Knowledge and Cosmos Development and Decline of the Medieval Perspective 2nd Edition Robert K DeKosky focuses on issues in astronomy cosmology physics matter theory philosophy and theology vital to the Copernican Revolution This book describes efforts among individuals advocating different world views to fit new ideas compatibly into broad perspectives reflecting four traditional patterns of interpretation teleological mechanical occultist and mathematico descriptive These four modes had guided medieval accounts of heavenly phenomena material process and motion The teleological explanation prevalent in Aristotle's natural philosophy posited final causes ends or goals toward which objects strove or attempted to become Ancient classical atomists had emphasized strictly mechanical explanations invoking direct material contact and collision of moving matter as agents of physical change Traditions of astrology magic and alchemy embraced an occultist pattern of interpretation citing hidden forces opaque to both sensual detection and rational understanding as explanations of various phenomena Finally the mathematico descriptive approach interpreted natural phenomena according to geometric or arithmetic relationships unlike the other three this did not involve causal explanation of a process Part I discusses development of the four patterns in the ancient period and their uneasy medieval relationships with each other and with basic Judaeo Muslim Christian exigencies of faith Theory of the heavens follows

including the mathematico descriptive approach of Ptolemaic astronomy the teleological and mechanical cosmology of Aristotle and occultist interpretations of astrologers and magicians Part I then turns to matter and materiality discussing differences among the mechanical philosophy of classical atomism teleological emphases in Aristotle's material theory and occultist assumptions of some alchemists Finally Part I analyzes conceptions of motion focusing on Aristotelian interpretations and critical commentaries thereon during the Middle Ages Part II relates struggles of leading early modern figures to adapt new concepts e g Copernicus heliocentric astronomy cosmology Galileo s inertial theories of motion and Kepler's elliptical planetary orbit to an allegiance to two or more of the four patterns of interpretation By this approach it identifies decreasing dependence on teleological explanation of physical phenomena as crucial to decline of medieval interpretations of those phenomena followed by rejection of teleology in the natural philosophy of Descartes and subsequent fruitful confluence of the mechanical mathematico descriptive and occultist patterns in the physics and cosmology of Isaac Metaphysical Foundations of Natural Science Immanuel Kant, 2004 Kant was centrally concerned with issues in the philosophy of natural science throughout his career The Metaphysical Foundations of Natural Science presents his most mature reflections on these themes in the context of both his critical philosophy presented in the Critique of Pure Reason and the natural science of his time This volume presents a translation by Michael Friedman which is especially clear and accurate There are explanatory notes indicating some of the main connections between the argument of the Metaphysical Foundations and the first Critique as well as parallel connections to Newton's Principia The volume is completed by an historical and philosophical introduction and a guide to further reading **Studies in Medieval Natural** Philosophy Stefano Caroti, 1989 The Origins of Natural Science Rudolf Steiner, 1985 9 lectures Dornach December 24 1922 January 6 1923 CW 326 Modern science and the scientism based on it so far from being the only possible reality principle is merely one way of conceiving the nature of reality a way moreover that has arisen only recently and that there is no reason to suppose will last forever Owen Barfield from the introduction These talks outline the subtle changes in our ideas and feelings in relation to the development of natural science Through this Steiner shows the significance of scientific research and the mode of thinking that goes with it As we look at what technology has brought us we may have a feeling like the pain we feel over the death of a loved one According to Steiner this feeling of loss will eventually become our most important stimulation to seek the spirit This book is a translation from German of Der Entstehungsmoment der Naturwissenschaft in der Weltgeschichte und ihre seitherige Entwicklung GA 326 A System of Natural Philosophy John Lee Comstock, 2025-05-22 A System of Natural Philosophy originally published in 1854 offers a comprehensive overview of the scientific principles understood at the time Authored by John Lee Comstock this treatise delves into mechanics hydrostatics hydraulics pneumatics acoustics optics astronomy electricity magnetism steam engine technology electro magnetism electrotype processes photography and daguerreotype techniques This book serves as a valuable resource for

understanding the foundations of modern scientific disciplines It provides insights into the historical development of physics and engineering Students and researchers of scientific history will find this volume an informative snapshot of mid 19th century scientific knowledge This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it This work was reproduced from the original artifact and remains as true to the original work as possible Therefore you will see the original copyright references library stamps as most of these works have been housed in our most important libraries around the world and other notations in the work This work is in the public domain in the United States of America and possibly other nations Within the United States you may freely copy and distribute this work as no entity individual or corporate has a copyright on the body of the work As a reproduction of a historical artifact this work may contain missing or blurred pages poor pictures errant marks etc Scholars believe and we concur that this work is important enough to be preserved reproduced and made generally available to the public We appreciate your support of the preservation process and thank you for being an important part of keeping this knowledge alive and relevant The Metaphysical Thought of Thomas Aguinas John F. Wippel, 2000 Written by a highly respected scholar of Thomas Aguinas s writings this volume offers a comprehensive presentation of Aguinas s metaphysical thought It is based on a thorough examination of his texts organized according to the philosophical order as he himself describes it rather than according to the theological order In the introduction and opening chapter John F Wippel examines Aguinas s view on the nature of metaphysics as a philosophical science and the relationship of its subject to divine being Part One is devoted to his metaphysical analysis of finite being It considers his views on the problem of the One and the Many in the order of being and includes his debt to Parmenides in formulating this problem and his application of analogy to finite being Subsequent chapters are devoted to participation in being the composition of essence and esse in finite beings and his appeal to a kind of relative nonbeing in resolving the problem of the One and the Many Part Two concentrates on Aquinas s views on the essential structure of finite being and treats substance accident composition and related issues including among others the relationship between the soul and its powers and unicity of substantial form It then considers his understanding of matter form composition of corporeal beings and their individuation Part Three explores Aguinas s philosophical discussion of divine being his denial that God's existence is self evident and his presentation of arguments for the existence of God first in earlier writings and then in the Five Ways of his Summa theologiae A separate chapter is devoted to his views on guidditative and analogical knowledge of God The concluding chapter revisits certain issues concerning finite being under the assumption that God's existence has now been established John F Wippel professor of philosophy at The Catholic University of America was recently awarded the prestigious Aquinas Medal by the American Catholic Philosophical Association In addition to numerous articles and papers Wippel has coauthored or edited several other works including Metaphysical Themes in Thomas Aguinas and The Metaphysical Thought of Godfrey of Fontaines both published by CUA Press PRAISE FOR THE

BOOK The quality of Wippel's historical research and interpretation and the detail of his argumentation make this a work that will have to be taken account of in any further studies of this topic John Boler International Studies in Philosophy A carefully and solidly argued presentation of Aquinas's metaphysics by a scholar of medieval philosophy and a superb metaphysician It should stand on the library shelf of every student of medieval philosophy sharing the stage with Wippel's other dependable works Prof Stephen F Brown Boston College In Wippel we have a master of medieval metaphysics who is at the height of his powers and who can bring to bear on this work of interpretation years of study not only of Aquinas but also of the whole context of medieval metaphysics in which Aquinas thought and wrote The result is a monumental work which will quickly become the definitive work on Aquinas's metaphysics Prof Eleonore Stump St Louis University Wippel proposes to set forth Thomas Aquinas's metaphysical thought based on his own texts in accord with the philosophical order This is a bold even audacious proposal but one that Wippel succeeds in realizing thanks to his expansive and detailed knowledge of a field in which he has worked for more than twenty years He has total command not only of the works of Thomas of his sources and of his earliest commentators but also of the secondary literature of this century in English Italian French German and Spanish Gregorianum A positively magisterial account of its subject
