 Atsushi Yokota,Masato Ikeda,2017-05-11 This book presents the latest findings on amino acid fermentation and reviews the
 50 year history of their development The book is divided into four parts the first of which presents a review of amino acid
 fermentation past and present The second part highlights selected examples of amino acid fermentation in more detail while
 the third focuses on recent advanced technologies The last part introduces readers to several topics for future research
 directions in amino acid production systems A new field amino acid fermentation was created by the progress of academic
 research and industrial development In 1908 the Japanese researcher Kikunae Ikeda discovered glutamate as an Umami
 substance Then a new seasoning MSG monosodium glutamate was commercialized Although glutamate was extracted from
 the hydro lysate of wheat or soybean in the early days a new production method was subsequently invented fermentation in
 which glutamate is produced from sugars such as glucose by a certain bacterium called Corynebacterium The topic of this
 volume is particularly connected in a significant way with biochemical biotechnological and microbial fields Both
 professionals in industry and an academic audience will understand the importance of this volume Handbook of
Biorefinery Research and Technology: Production of Biofuels and Biochemicals Virendra Bisaria,2024-08-31 This handbook
 provides a comprehensive review of the latest scientific developments through authoritative expertly validated overviews in
 this field It covers the basic principles upfront research accomplishments as well as successful industrial applications Each
 chapter is written by a domain expert which besides the in depth review of the topic also outlines an economic outlook and
 future directions of research of the area The book is structured in a way that is appropriate for advanced graduate students
 and professionals in diverse scientific and engineering communities including biocatalysis genetic engineering metabolic
 engineering and bioprocess technology **Microbial Production of High-Value Products** Bernd H. A. Rehm,David
 Wibowo,2022-09-06 This edited volume emphasizes how microorganisms have become a reliable pillar of biotechnology The
 authors discuss advances in synthetic biology and genetic engineering that have made it possible to reprogram the microbial
 cellular capabilities This enables an economically viable production of high value products at an industrial level The first part

of the book provides an overview of synthetic biology and genome editing tools for engineering microbial cell factories in modern fermentation Readers also learn how high throughput bioprocessing methods are used to recover and purify microbial products The remaining parts of this book explore the implementation and challenges of these upstream and downstream processing techniques for manufacturing high value products Cost effectiveness and quality control are key factors when discussing the production of low molecular weight products biopharmaceuticals biopolymers and protein based nanoparticles This book is a valuable resource for biotechnologists both in the industry and in academia
