The Militarisation Of Space:

The Militarization and Weaponization of Space Matthew Mowthorpe, 2004-01-01 The militarization of space began as a rivalry between the United States and the Soviet Union and grew to enormous proportions during the height of the Cold War Satellite reconnaissance navigation and weapons guidance and electronic intelligence comprise only a few of the efforts taken to militarize and dominate space Today as the prominence of information technology computing and telecommunications advances so does the concept of space as a battlefield In *The Militarization and Weaponization of Space* Matthew Mowthorpe diligently analyzes the military space policies of the United States the Soviet Union Russia and the People's Republic of China from the Cold War period to the present day Mowthorpe focuses on the development of the ballistic missile defense and other anti satellite systems and aptly assesses to what degree space will become armed This work cogently addresses an issue of increasing urgency to scholars of international politics The Militarisation of Space Stephen Kirby, 1987 **The Militarization of European Space Policy** Thomas Hoerber, Iraklis Oikonomou, 2023-10-30 This book is focused on militarization as the nucleus of EU space policy and the interrelatedness of European security industrial competitiveness and military capabilities in the shaping of this policy The EU and key member states have increasingly joined the US China and Russia among others in regarding space assets as critical military as well as economic industrial and technological enablers This book tackles this issue by first shedding light on the military aspects of EU space policy with special emphasis on the security and defence dimensions of projects such as Galileo Copernicus Space Situational Awareness and Satellite Communication In this context contributors confront the empirical aspect of developments including the role of different institutional actors and the involvement of specific member states Further the volume analyses the discursive ideological normative and theoretical foundations of the use of space by the EU for strategic purposes drawing on the broad spectrum of European integration International Relations theory Last but not least the volume discusses initiatives outside the EU by key global space players with an emphasis on the US and transatlantic space relations All chapters maintain a solid empirical foundation in the form of geographical or issue related focus with an area specific emphasis on the EU as a whole transatlantic relations the policies of key member states such as France and Italy and core space powers such as the US China and India This book will be of much interest to students of space power security studies European politics and International Relations *The Militarization of Space* Paul B. Stares, 1985 From the front jacket flap Contrary to widespread expectations in the wake of Sputnik outer space did not immediately become a new arena for a superpower arms competition Although the United States and the Soviet Union began to use space extensively for military purposes both exhibited relatively little interest in the development of space weaponry By the beginning of the 1980s however an arms race in space seemed inevitable Now both the United States and the Soviet Union have developed the means to disable satellites and are now also considering the deployment of ballistic missile defenses in space Why were these weapons never

extensively developed earlier What changed in the late 1970s to reverse the predominant trend in the militarization of space What are the lessons for arms control and for Soviet American relations in general Paul Stares addresses these fundamental questions by examining the factors that have shaped United States policy towards the military use of space and in particular the development of antisatellite weapons States relies heavily on declassified documents found in Presidential libraries and made available under the Freedom of Information Act and he obtained additional information from a comprehensive series of interview with former members of the U S government and armed services By judicious use of this material he provides the first detailed account of United States space weapons policy and programs An invaluable source of information for defense analysts and scholars of international relations The Militarization of Space is essential reading for anyone wishing to understand present United States military space policy and its implications for the future *Weaponisation of Space: An Inevitable Reality and Plausible Fallout* Group Captain PA Patil,2017-01-15 Militarily use of spacebased assets when integrated with operations assumes importance as one of the many force multipliers As on date outer space is being extensively used by the armed forces for varied services which include navigation intelligence surveillance reconnaissance environmental monitoring and advance warning The command and control in today s netcentric environment also depends on space resources Thus the use of outer space with spacebased assets in support of military operations leads to the deduction that space as a medium stands militarised Of late many of the dominant nations have developed or are expanding capabilities to attack the spacebased assets of potential adversaries to disrupt command and control structures Countries like the US and China are contesting for space supremacy and working towards developing spacebased weapons capable of being delivered from spacebased platforms These developments in turn are infusing a sense of insecurity amongst other international players including India and have raised concerns worldwide Development of spacebased weapons by any state has the potential to ignite a new arms race in space as many countries now possess the wherewithal for launching spacebased assets capable of carrying the required payloads Thus from the present capability of militarisation of space we seem to be graduating towards weaponisation of space As outer space has been designated as one of the global commons any sort of deployment or employment of space weapons raises concerns and any use of spacebased weapons will have unpleasant cascading effects In the absence of any international curb or law on space weaponisation it continues to be a conceptual possibility as well as an empirical reality **The International Politics of Space** Michael Sheehan,2007-10-31 The year 2007 saw the fiftieth anniversary of the Space Age which began with the launching of Sputnik by the Soviet Union in October 1957 Space is crucial to the politics of the postmodern world It has seen competition and cooperation in the past fifty years and is in danger of becoming a battlefield in the next fifty The International Po Elgar Encyclopedia of Space Policy and Governance Sa'id Mosteshar,Christoph Beischl,Arne Sönnichsen,2025-06-09 This authoritative Encyclopedia explores the dynamic fields of space policy and governance Authored by over 50 expert scholars and practitioners from across the globe it delves into the

key concepts governing bodies and challenges involved in regulating the space sector Entries provide insights into topics ranging from cybersecurity and sustainability to astropolitics and space law critically engaging with the definition core issues and future directions of each aspect *Routledge Handbook of War, Law and Technology* James Gow, Ernst

Dijxhoorn, Rachel Kerr, Guglielmo Verdirame, 2019-05-15 This volume provides an authoritative cutting edge resource on the characteristics of both technological and social change in warfare in the twenty first century and the challenges such change presents to international law The character of contemporary warfare has recently undergone significant transformation in several important respects the nature of the actors the changing technological capabilities available to them and the sites and spaces in which war is fought These changes have augmented the phenomenon of non obvious warfare making understanding warfare one of the key challenges Such developments have been accompanied by significant flux and uncertainty in the international legal sphere This handbook brings together a unique blend of expertise combining scholars and practitioners in science and technology international law strategy and policy in order properly to understand and identify the chief characteristics and features of a range of innovative developments means and processes in the context of obvious and non obvious warfare The handbook has six thematic sections Law war and technology Cyber warfare Autonomy robotics and drones Synthetic biology New frontiers International perspectives This interdisciplinary blend and the novel rich and insightful contribution that it makes across various fields will make this volume a crucial research tool and guide for practitioners scholars and students of war studies security studies technology and design ethics international relations and international law *Securing Outer Space* Natalie Bormann, Michael Sheehan, 2009-01-30 This edited volume analyses a number of controversial policies and strategies relating to Space activities and to place these in a broader theoretical perspective The book reveals the relationship between activities in Outer Space and terrestrial international relations

The Law of War Ingrid Detter, 2016-03-03 The third edition of Ingrid Detter s authoritative work explores the changing legal context of modern warfare in light of events over the last decade Ingrid Detter reviews the status of non State actors as individuals and groups become more prominent in international society Covering post 9 11 events and the resulting changes in the ethos of war the author analyses the role of military companies and examines what their legitimacy means for international society The edition also discusses certain intrinsic rules in the Law of War such as rules giving individuals the right to be spared genocide torture slavery and apartheid and assure them basic democratic rights The author questions the right of illegal combatants to be treated as prisoners of war and suggests that a minimum standard must be afforded to all whether captured dictators or detainees suspected of terrorism In the modern world the individual the soldier the civilian the dictator the terrorist or the pirate can no longer behave as they wish Further new topics include target killings the right to protect R2P claimed to be a new form of intervention the use of unregulated weapons such as drones and robots the war scenario in Outer Space and cyber crimes There is also a discussion of new developments in the field of war crimes including

severe criticism of the novel concept joint criminal enterprise JCE which in the opinion of the author undermines the Rule of Law This updated and expanded edition will be of use to statesmen scholars and students of international relations and international law

Space Strategy and Military Doctrine Bert Chapman, 2025-07-24 Examining open access civilian and military space policy strategy and doctrine documents this book highlights emerging trends and developments in military space strategy Bert Chapman collects public documents from Australia Canada the European Union NATO the United States and the United Kingdom from 2017 onward to illustrate space's critical importance to national and international security and to multiple areas of civilian economic and personal use including climate change food security personal and global communications and the potential for expanded space exploration In light of recent revelations that Russia may be capable and desirous of exploding nuclear weapons in space to damage civilian and military space based infrastructures of the U S and other countries and China's increasing space assertiveness and capabilities it is more important than ever that civilian readers have the access and background knowledge necessary to parse publicly available documents relating to space strategy so that they may effectively participate in the legislative and regulatory policymaking processes of their governments

Sovereignty and Jurisdiction in Airspace and Outer Space Gbenga Oduntan, 2011-09-12 Sovereignty and jurisdiction are legal doctrines of a complex nature which have been subject to differing interpretations by scholars in legal literature The tridimensionality of state territory recognised under customary international law subsists until the present but there are other territories that do not or cannot belong to any state or political entity which also must be accounted for in legal theory The issues surrounding sovereignty and jurisdiction are likely to become ever more pressing as globalisation growing pressure on resources and the need for energy and national security become acute and the resolution of special delimitation disputes seems likely to become a vital question in the twenty first century As a result of the fast pace of technological developments in air and space activities and the massive increases in air transportation satellite communications and space exploration the need for scholars and practitioners to sharpen their appreciation of the legal and political issues becomes crucial This book will focus primarily on the issues of sovereignty jurisdiction and control in airspace and outer space and their effects on public and private activities but it will also look at related issues pertaining to the Seas and Antarctica Commercial exploitation resource control and the international regime regulating contractual obligations in relation to transportation of goods and services over all forms of territory will be examined to the extent that they are necessary to explain jurisdictional rights and duties over territory Older problems of international law such as crimes in the air and airspace trespass are treated along with newer developments such as space tourism as well as growing demand for private ownership and involvement in outer space exploitation The book goes on to consider the distinction between airspace and outer space and puts forward legal criteria which would allow for the resolution of the spatial delimitation dispute These criteria would determine where in spatial terms the exclusive sovereignty of airspace ends and where outer space the

province of all mankind begins and contribute to the jurisprudence of territorial sovereignty and jurisdiction **The Arms Race at a Time of Decision** Joseph Rotblat, Alessandro Pascolini, 1984-07-01 **China's Aerospace Strategy**, 2013-02-15

China has emerged as a major regional power and has clear aspirations to be a global power in the not too distant future Comprehensive military modernisation programs sustained economic scientific and technological developments have substantially elevated China's international profile For the past three decades China has been modernising its strategic weaponry and enhancing the capabilities of its nuclear warheads It has also been developing new and complex military platforms that would be of great value to joint operations warfare The decade from 2011 through 2020 will prove critical to the PLA as it attempts to integrate many new and complex platforms and to adopt modern operational concepts including network centric warfare China's air force is in the midst of a transformation A decade ago it was an antiquated service equipped almost exclusively with weapons based on 1950s era Soviet designs and operated by personnel with questionable training according to outdated employment concepts Today the PLAAF appears to be on its way to becoming a modern highly capable air force for the 21st century The PLA Air Force has continued expanding its inventory of long range advanced SAM systems and now possesses one of the largest such forces in the world The January 2011 flight test of China's next generation fighter prototype the J 20 highlights China's ambition to produce a fighter aircraft that incorporates stealth attributes advanced avionics and super cruise capable engines over the next several years China is upgrading its B 6 bomber fleet with a new longer range variant that will be armed with a new long range cruise missile China's aviation industry is developing several types of airborne early warning and control system AWACS aircraft These include the KJ 200 based on the Y 8 airframe for AWACS as well as intelligence collection and maritime surveillance and the KJ 2000 based on a modified Russian IL 76 airframe China can decisively defeat India in any nuclear confrontation but is currently unable to match the IAF in any conventional conflict specifically along the border region of the Himalayas Also the IAF has greater experience than PLAAF in actual combat operations with its many conflicts India is gradually building powerful military capabilities in tune with its expanding geopolitical interests even as the eastern and western fronts are being strengthened to deter the twin Pakistan China threat IAF is on the path to transform into a true aerospace power with the capability to rapidly deploy and operate at great distances As for the two front challenge apart from progressively basing Sukhoi 30MKI fighters and missile squadrons in the two theatres the plan also includes upgrading the airfields and advanced landing grounds in the sectors in order to give both defensive and offensive options It is important for India to realise the relevance of Chinese achievements in space technologies and to critically view and analyse Chinese achievements in the area of manned space missions In order to achieve further success in the space arena developments in cryogenic technology are important for India These should be pursued in order to develop the capability of launching 4 5 ton satellites which will help in achieving a greater commercial edge Programmes like moon and mars missions using robotic technologies are also important in order to know more about

the nature of resources especially minerals available on these bodies and undertaking their mining It is also important to work towards launching satellites for India's armed forces which will help gain an advantage over adversaries The book is an attempt to analyse the strategic importance of rising economic political and military stature of China with a view to understand its regional and global implications in a new world order As a rational actor in a chaotic world China will defend its security interests at all costs Besides undertaking a comprehensive modernisation of its armed forces China is developing a series of offensive space capabilities while advocating the peaceful use of outer space The book will be of immense value not only to the readers of the countries in the immediate neighbourhood of China but to the strategic community across the globe since rise of China and other major Asian players including India will shape the strategic international environment in the decades to come during this century It is hoped that the book will contribute to the understanding of the growing importance of integration of air and space and the fact that aerospace has truly become the new theatre of war and thereby establishing a new milestone in mankind's history of warfare The unifying space dimension will remain the single most important source for information and communication which can be used in multiple forms Hence China's aerospace strategy and its implications for India assume greater military importance

Yearbook on Space Policy 2007/2008 Kai-Uwe Schrogl, Charlotte Mathieu, Nicolas Peter, 2010-07-19 At the time of finalising this second volume of the Yearbook on Space Policy which covers the period mid 2007 to mid 2008 Europe is as visible and strong in the area of space activities as never before Its space probes are present on the Moon around Mars and on Saturn's Moon Titan and are chasing asteroids and comets Ariane V is the most successful commercial launch vehicle and more and more European space applications satellites are in operation Finally with the successful launch of the Columbus Orbital Facility COF the most prominent highlight of this period which is also depicted on the cover of this Yearbook and the first Automated Transfer Vehicle ATV Europe has become a decisive player in human space flight This is accompanied by new policy initiatives on the ministerial level which have been bringing the European Space Agency and the European Union steadily closer Europe's outstanding development and positioning in the space field is based not only on Europe's successful engineering and scientific capabilities and capacities but also on the forceful political determination of all European actors to maintain and even further their engagement in the use of outer space And it is this political determination which provides the focus for this Yearbook on Space Policy The Yearbook describes and analyses the contexts and contents of space policy Its primary field of investigation is Europe but it also covers the whole range of global space activities and their influence on European endeavours

European Integration and Space Policy Thomas Hoerber, Antonella Forganni, 2020-12-21 This volume addresses developments in European space policy and its significance for European integration using discourse theory as a framework It seeks to address the developments in European space policy by examining several sensitive security questions linked in general with space activities on the one hand and the interplay between space policy and security policy in the European Union EU on the other

The book argues that defence and security matters should be studied for a better understanding of space projects in their historical political economic legal and social context The volume seeks to answer the following key questions What can space policy contribute to European identity formation and the integration process What are the interests of member states EU institutions in space How is space policy perceived by European institutions and how have they been engaged in the policy process to promote activity in space In which ways is the EU engaged in space in terms of policy areas e g foreign policy industrial policy security and defence policies What is the impact of institutions on the policy making process in European space policy This book will be of interest to students of EU policy space policy discourse studies and International Relations in general

The New Laws of Outer Space Ugo Pagallo,2024-11-14 This book maps out the moral legal and societal issues brought forth by the use of autonomous systems such as AI and smart robots in outer space Humanity is on the brink of a new space era in which projects for permanent human colonies on the Moon and space missions with autonomous AI systems will soon become a reality Principles and provisions of international space law fall increasingly short in tackling this scenario Experts and institutions have recommended improvements to the legal framework such as new international agreements or policies that would not require any amendment to conventional law Most of the time such proposals and recommendations overlook the challenges posed by technology and how autonomous and intelligent systems in outer space require moral and legal standards of their own This book argues that the traditional focus on satellite communications space related services and the appropriability of celestial resources needs to be integrated by new laws of outer space regulating cybersecurity law and environmental law data governance and consumer protection The new laws of outer space will increasingly concern the development of new standards for the behaviour and decision making of AI systems and smart robots with and without humans aboard deep space missions and in next generation colonies What laws shall govern us out there in a new terra incognita This is the question that the book sets out to answer

The Use of Force and the International Legal System Terry D. Gill,Kinga Tibori-Szabó,2023-12-21 This book provides accessible in depth coverage and analysis of how international law regulates the use of force through an intra disciplinary perspective Using a modernized legal positivist approach it offers a unique focus on the relationship and functions of jus ad bellum within the wider legal landscape

Space Law Francis Lyall,2016-12-05 The opening of space to exploration and use has had profound effects on society Remote sensing by satellite has improved meteorology land use and the monitoring of the environment Satellite television immediately informs us visually of events in formerly remote locations as well as providing many entertainment channels World telecommunication facilities have been revolutionised Global positioning has improved transport This book examines the varied elements of public law that lie behind and regulate the use of space It also makes suggestions for the development and improvement of the law particularly as private enterprise plays an increasing role in space

The Law of War Em Prof Ingrid Detter,2013-07-28 The third edition of Ingrid Detter s authoritative work explores the changing legal context of

modern warfare in light of events over the last decade The new edition covers post 9 11 events and the resulting changes in the ethos of war It analyses the role of military companies sometimes authorised by States to act in war like situations and examines what their legitimacy means for international society The edition also discusses certain intrinsic rules such as rules giving individuals the right to be spared genocide torture slavery and apartheid and assure them basic democratic rights
