The Mind And Method Of The Historian:

The Mind and Method of the Historian Emmanuel Le Roy Ladurie, 1978 [The Mind and Method of the Historian](#)
Emmanuel Le Roy Ladurie, 2017-02-23 There cannot be much serious doubt that in the last twenty years Emmanuel Le Roy Ladurie has been one of the most if not the most original versatile and imaginative historians in the world he has acquired an almost unique capacity to capture the imagination of a mass audience while still retaining the respect and admiration of his professional colleagues LAWRENCE STONE New York Review of Books In addition to being a gifted storyteller Ladurie is a committed student of the 100 odd places historians must go to piece together the stories of the unwashed and unnoticed of the techniques to weave incomplete and various kinds of evidence into the cloth of history The essays share an interest in discovering what life itself and not just the events of life was like in the past how people lived loved took sick or didn't take sick what they ate who they listened to the weather the crops status and the long term trends of such things that give us a picture of aggregate life ROBERT DAWIDOFF Los Angeles Times makes for provocative and interesting reading even for those who might consider themselves devotees of an older style of history Ladurie is one of those unusual scholars who even as he fulfils the typical expectation of his calling is also transforming it with his own vision of what it might be STANLEY J IDZERDA Review of Politics **Worlds Ending. Ending Worlds** Jenny Stümer, Michael Dunn, 2023-12-04 The notion of apocalypse is an age old concept which has gained renewed interest in popular and scholarly discourse The book highlights the versatile explications of apocalypse today demonstrating that apocalyptic transformations the various encounters with anthropogenic climate change nuclear violence polarized politics colonial assault and capitalist extractivism navigate a range of interdisciplinary views on the present moment Moving from old worlds to new worlds from world ending experiences to apocalyptic imaginaries and finally from authoritarianism to activism and advocacy the contributions begin to map the emerging field of Apocalyptic and Post Apocalyptic Studies Foregrounding the myriad ways in which collective imaginations of apocalypse underpin ethical political and sometimes individual experience the authors provide key points of reference for understanding old and new predicaments that are transforming our many worlds [The Logic of Historical Explanation](#)
Clayton Roberts, 1995-12-15 Ever since 1942 when Carl Hempel declared that historical events are explained by subsuming them under laws governing the occurrence of similar events philosophers have debated the validity of explanations based on covering laws In *The Logic of Historical Explanation* Clayton Roberts provides a key to understanding the role of covering laws in historical explanation He does so by distinguishing between their use at the macro and micro levels a distinction that no other scholar has made Roberts contends that the positivists were right to believe that covering laws are indispensable in historical explanations but wrong to think that these laws apply to macro events such as wars and revolutions Similarly the humanists were right to declare that historians do not explain the occurrence of macro events by subsuming them under covering laws but wrong to deny the role of covering laws in tracing the course of events leading to the macro event Roberts

resolves this debate by showing that though useless in explaining macro events covering laws are indispensable in connecting the steps in an explanatory narrative He then sets forth the logic of an explanatory narrative explores the nature of rational explanation and distinguishes the logic of historical interpretation from the logic of historical explanation *The Occult Mind* Christopher Lehrich, 2012-08-17 Given the historical orientation of philosophy is it unreasonable to suggest a wider cast of the net into the deep waters of magic By encountering magical thought as theory we come to a new understanding of a thought that looks back at us from a funhouse mirror from *The Occult Mind* Divination like many critical modes involves reading signs and magic more generally can be seen as a kind of criticism that takes the universe seen and unseen known and unknowable as its text In *The Occult Mind* Christopher I Lehrich explores the history of magic in Western thought suggesting a bold new understanding of the claims made about the power of various belief systems In closely interlinked essays on such disparate topics as ley lines the Tarot the Corpus Hermeticum writing and ritual in magical practice and early attempts to decipher Egyptian hieroglyphics Lehrich treats magic and its parts as an intellectual object that requires interpretive zeal on the part of readers observers Drawing illuminating parallels between the practice of magic and more recent interpretive systems structuralism deconstruction semiotics Lehrich deftly suggests that the specter of magic haunts all such attempts to grasp the character of knowledge Offering a radical new approach to the nature and value of occult thought Lehrich's brilliantly conceived and executed book posits magic as a mode of theory that is intrinsically subversive of normative conceptions of reason and truth In elucidating the deep parallels between occult thought and academic discourse Lehrich demonstrates that sixteenth century occult philosophy often touched on issues that have become central to philosophical discourse only in the past fifty years

Landmark Essays on American Public Address Martin J. Medhurst, 2020-08-26 This volume traces the historical evolution of American academic thought concerning public address what it is how it ought to be studied and what can be learned by engaging rhetorical texts in an analytical fashion To begin one must distinguish among three separate but interrelated uses of the term public address as practice theory and criticism The essays in this volume represent landmarks in the literal sense of that term they are marks on the intellectual landscape that indicate where scholars and ideas have passed and in that passing left a mark for future generations It is appropriate to revisit the landmarks that have set public address off as a field of study and it allows readers to remember the struggles that have led to the current situation Most of the authors of the following chapters are deceased but their ideas live on transformed adapted modified rejected and reborn The scholarly dialectic continues What constitutes a study in public address how best to approach rhetorical texts which analytical tools are required for the job how best to balance text with context and what role ought theory to play in the conduct or outcome of critical inquiry these questions live on To answer them at all is to engender debate and that is how it should be if the intellectual vitality of public address is to be maintained The papers are a prolegomenon to such studies for they mark where scholars have been and point the way to where they still

must go **A Study of School Reform from the Perspective of the Annales School of French Historiography** Allan John Pitman, 1986 *History*, 1983 The Mind of Thucydides Jacqueline de Romilly, 2017-12-15 The publication of Jacqueline de Romilly's *Histoire et raison chez Thucydide* in 1956 virtually transformed scholarship on Thucydides. Rather than mining the Peloponnesian War to speculate on its layers of composition or second-guess its accuracy, it treated it as a work of art deserving rhetorical and aesthetic analysis. Ahead of its time in its sophisticated focus upon the verbal texture of narrative, it proved that a literary approach offered the most productive and nuanced way to study Thucydides. Still in print in the original French, the book has influenced numerous Classicists and historians and is now available in English for the first time in a careful translation by Elizabeth Trapnell Rawlings. The Cornell edition includes an introduction by Hunter R. Rawlings III and Jeffrey Rusten tracing the context of this book's original publication and its continuing influence on the study of Thucydides. Romilly shows that Thucydides constructs his account of the Peloponnesian War as a profoundly intellectual experience for readers who want to discern the patterns underlying historical events. Employing a commanding logic that exercises total control over the data of history, Thucydides uses rigorous principles of selection, suggestive juxtapositions, and artfully opposed speeches to reveal systematic relationships between plans and outcomes, impose meaning on the smallest events, and insist on the constant battle between intellect and chance. Thucydides' mind, found in unity and coherence, its ideal of historical truth. The Expository Times, 1911 *The Expository Times* James Hastings, Ann Wilson Hastings, Edward Hastings, 1911 *The Mind of Rome* Cyril Bailey, 1926 *The Routledge Companion to Historical Studies* Alun Munslow, 2006-02 With twenty-nine new entries and updated existing ones, this new edition provides a much-needed critical introduction to the key issues, historians, and philosophers and their ideas and theories which have prompted the rethinking of history. **The Study of History**, 1988 The chief objective of this text is to provide a handy reference guide for teachers, students, and researchers of modern European economic and social history. Since the bibliography covers only works written in the English language, it will probably be of less use to the last-named group at least insofar as those within it are already seasoned researchers on a particular country or topic. However, it would have been quite impossible from the point of view of length to have included all the literature in foreign languages, while to have done so would have defeated the essential aim of the volume, namely that of providing a reasonably convenient guide for those who teach and study the subject but who are not primarily specialists in the field. **The Historian's Craft** Marc Bloch, 1992 This work by the co-founder of the Annales School deals with the uses and methods of history. It is useful for students of history, teachers of historiography, and all those interested in the writings of the Annales school. The Thought at the Back of the Mind Annette Aronowicz, 2024-10-31 *The Thought at the Back of the Mind* is a plea for the centrality of the humanities as a vehicle of knowledge about ourselves and about the reality around us. It illustrates the interpretative arts through Aronowicz's close reading of Charles Peguy, Don DeLillo, Bernard d'Espagnat, Wisława Szymborska, and Marilynne Robinson. Each author

exhibits a complex relationship to the narratives emanating from the sciences wonder terror appreciation resistance All in different ways point to a dimension of the human that cannot be captured through the scientific method For the most part they make their points not through abstract argument but through an exploration of daily life Each writer gives pride of place to metaphor humor and or intuition as indispensable conduits to the reality within and without us The Thought at the Back of the Mind explores the religious dimension embedded in the narratives emanating from the natural sciences as well as in the quest to formulate what eludes them These two contrary dimensions of our relation to the sciences in their various configurations reveal us to ourselves in our historical moment **Madras Christian College Magazine ,1913 Writing**

the History of the Mind Cristina Chimisso,2016-02-11 For much of the twentieth century French intellectual life was dominated by theoreticians and historians of mentalit Traditionally the study of the mind and of its limits and capabilities was the domain of philosophy however in the first decades of the twentieth century practitioners of the emergent human and social sciences were increasingly competing with philosophers in this field ethnologists sociologists psychologists and historians of science were all claiming to study how people think Scholars including Gaston Bachelard Georges Canguilhem L on Brunschvicg Lucien L vy Bruhl Lucien Febvre Abel Rey Alexandre Koyr and H l ne Metzger were all investigating the mind historically and participating in shared research projects Yet as they have since been appropriated by the different disciplines literature on their findings has so far failed to recognise the connections between their research and their importance in intellectual history In this exemplary book Cristina Chimisso reconstructs the world of these intellectuals and the key debates in the philosophy of mind particularly between those who studied specific mentalities by employing prevalently historical and philological methods and those who thought it possible to write a history of the mind outlining the evolution of ways of thinking that had produced the modern mentality Dr Chimisso situates the key French scholars in their historical context and shows how their ideas and agendas were indissolubly linked with their social and institutional positions such as their political and religious allegiances their status in academia and their familial situation The author employs a vast range of original research using philosophical and scientific texts as well as archive documents correspondence and seminar minutes from the period covered to recreate the milieu in which these relatively neglected scholars made advances in the history of philosophy and science and produced *Wax Tablets of the Mind* Jocelyn Penny Small,2003-09-02 In this volume the author argues that literacy is a complex combination of various skills not just the ability to read and write the technology of writing the encoding and decoding of text symbols the interpretation of meaning the retrieval and display systems which organize how meaning is stored and memory The book explores the relationship between literacy orality and memory in classical antiquity not only from the point of view of antiquity but also from that of modern cognitive psychology It examines the contemporary as well as the ancient debate about how the writing tools we possess interact and affect the product why they should do so and how the tasks required of memory change and develop with literacy s increasing output and evoking
