The Planets:

The Planets Dava Sobel, 2006-10-31 Dava Sobel's *The Glass Universe* will be available from Viking in December 2016. With her bestsellers *Longitude* and *Galileo's Daughter*, Dava Sobel introduced readers to her rare gift for weaving complex scientific concepts into a compelling narrative. Now Sobel brings her full talents to bear on what is perhaps her most ambitious topic to date: the planets of our solar system. Sobel explores the origins and oddities of the planets through the lens of popular culture, from astrology, mythology, and science fiction to art, music, poetry, biography, and history. Written in her characteristically graceful prose, *The Planets* is a stunningly original celebration of our solar system and offers a distinctive view of our place in the universe. A New York Times extended bestseller, A Featured Alternate of the Book of the Month Club, History Book Club, Scientific American Book Club, and Natural Science Book Club. Includes 11 full-color illustrations by artist Lynette R. Cook. *The Planets* lets us fall in love with the heavens all over again. The New York Times Book Review: Playful, lyrical, a guided tour so imaginative that we forget we're being educated as we're being entertained. Newsweek: Sobel has outdone her extraordinary talent for keeping readers enthralled. *Longitude* and *Galileo's Daughter* were exciting enough, but *The Planets* has a charm of its own. A splendid and enticing book. San Francisco Chronicle: A sublime journey. Sobel's writing is as bright as the sun and its thinking as star-studded as the cosmos. The Atlanta Journal-Constitution: An incantatory serenade to the Solar System. Grade A. Entertainment Weekly: Like Sobel's *Longitude* and *Galileo's Daughter*, *The Planets* combines masterful storytelling with clear, engaging explanations of the essential scientific facts. Physics World. **The Planets (Fifth Edition)** Gail Gibbons, 2023-12-12 A new edition of a nonfiction favorite for more than 20 years from science writer Gail Gibbons, updated with the latest discoveries in space exploration. From the burning surface of Venus to the freezing darkness of Neptune, Gail Gibbons takes children on a tour of our solar system, which are very different from each other in size, shape, orbit, and even weather. Since its original publication in 1993, *The Planets* has been a home and classroom staple for introducing our solar system to the youngest readers. With her signature blend of clear, bright illustrations and accessible text, Gail Gibbons takes readers on a tour of our planetary neighbors, near and far. This updated edition brings the latest scientific understanding of the planets of our solar system to young readers. The bodies in our solar system are named, described, and illustrated in clear, well-labeled spreads that give a strong sense of shape and scale to our skies. Each entry is full of intriguing details about their composition, behavior, and moons. *Guide to The Planets* Richard Pearson,

Exploring the Planets Fred Taylor, 2016-02-25 The planets fascinate us, and naturally we care about our own Earth and things like how well we can forecast the weather and whether climate is really changing. *Exploring the Planets* offers a personal account on how the space programme evolved. It begins in the era of the first blurry views of our Earth as seen from space and ends with current plans for sophisticated robots on places as near as our neighbours Venus and Mars and as far away as the rainy, lake-lands of Saturn's planet-sized moon Titan. Examining the scientific goals of these complex voyages of

discovery and the joys and hardships of working to achieve them The Space Age is now about 50 years old and for those lucky enough to be part of it at its inception it's filled a worklong lifetime Today several satellites around the Earth have studied the atmosphere and the climate using instruments on board that the author helped design and build Deep space missions were embarked upon to visit the planets all of the major bodies six planets the Moon and minor bodies asteroids and comets of the classical Solar System have been scrutinised close up by experiments built in various laboratories worldwide Most of the narrative is based on the author's experiences at the world's space agencies research labs and conferences and at other places as diverse as Cape Canaveral and No 10 Downing Street **A Tour of the Planets** Melvin Berger, 1996
