3.2. Comparison Criteria of Green Infrastructure

Five authors have made the comparison. In order to guide development and respond to changes, GI has been introduced to provide more informed and systematic way of considering priorities in the spatial planning process, and environmental friendly techniques which can be modified to fit into design situations (Davies and Reddie, 2006). Parker (2008) identifies green infrastructure as one way to conserve natural systems and areas within urban communities.

According to American Society of Landscape Architects (ASLA), green infrastructure has two scales: national or regional level; and urban level. The national or regional level refers to interconnected networks of park systems and wildlife corridors; and the urban level refers to parks and urban forestry, but also to green roofs, walls, and other techniques to reduce energy consumption and storm water runoff. Five contexts and functions of GI [14]:

- Sustainable resource management in land and water resources;
- Biodiversity relating to the importance of connectivity of habitats at a variety of landscape scales;
- Recreation relating to greenways and the use of non-car routes to address public health and quality of life issues; and
- Landscape resources examined from aesthetic, experiential and functional points of view; and Regional development and promotion of overall environmental quality and quality of life.

Benedict and McMahon (2002) summarized seven principles for successful GI initiatives:

Principle 1: To plan and protect interconnected green space systems, successful initiatives can be used as the framework by sharing similar strategies.

Principle 2: Design and plan GI before development. Restoration of natural systems is far more expensive than protecting and preserving existing landscapes. It is essential to identify and protect critical ecological sites and linkages in advance.

The Price of Amenity Roy Gregory, 1971 *Planning and the Rural Environment* Joan Davidson, Gerald Wibberley, 2016-04-20 *Planning and the Rural Environment* examines the environmental issues affecting countryside planning. Emphasis is placed on the look and feel of the open countryside, the function and appearance of the rural environment rather than the problems of its people and the settlements in which they live. Also discussed is the conflict of interest generated between some of the major planning systems concerned with the development of rural activities and the protection of rural resources. Comprised of 13 chapters, this volume begins with an assessment of conflicting views of how a countryside of the future should develop and the degree of control and direction that should take place. The following chapters consider how the emerging range of environmental problems and opportunities in rural planning can best be illustrated. In particular, the dominance of agriculture as a rural activity is analyzed together with forest and woodland management, leisure activity in the countryside and conservation of resources and wildlife. The next section is devoted to uplands and the urban fringe, paying particular attention to some of the ways in which rural interests interact in two very different areas. Finally, the development of rural planning is reviewed and issues that are expected to shape the countryside of the future are considered. This book should be of interest to postgraduate students of rural planning and specialists in various fields of countryside planning.

Studies in Economics and Political Science Various, 2022-07-30 This 13 volume collection, originally published between 1929 and 1982, contains a selection of titles from the fields of economics and political science. Many individual titles focus on Britain and include topics such as democracy, environmental planning, foreign policy, legislation, microeconomics, national income and the welfare state. The earliest title looks at the nature of nationality and two further titles look at politics in France. This set will be an insight for those interested in the history of either field.

Planning and Ecology R. D. Roberts, T. M. Roberts, 2013-11-11 Professional planning is commonly defined as an activity which is concerned with the rational allocation or exploitation of resources for man's maximum short and long term benefit. The science of ecology is the study of the basic components of these resources: soil, water, air, etc., and their interrelationships with living organisms. Planning and ecology therefore have many common interests and as such have long been associated in resource management. This association was, for example, reflected as early as the 19th century in the writings of Patrick Geddes, the progenitor of modern town planning, whose training as a biologist led him to re-interpret the phenomena of urbanization in ecological terms. Geddes (1886). Since the time of Geddes, the place of ecology has declined in planning circles, as other professions and considerations, initially public health and engineering, latterly economic and sociological, have become more central. The reasons for this shifting emphasis are three-fold. First, they reflect changing social attitudes and aspirations in the post-war period. Secondly, many other professions and persuasions, agriculturalists, foresters, industrialists, etc., became organized as pressure groups and helped shape public attitudes and governmental actions. Thirdly, and by far the

most important reason is the prevalence of misconceptions about ecology Too many people perhaps misled by the debate surrounding the environmental movement equate ecology with conservation In reality conservation is but one component part of ecology Rural Wales in the Twenty-First Century Paul Milbourne,2011-10-15 This book explores the changing relations between people place and environment in rural Wales in the twenty first century and provides new understandings of rural geography and rural sociology **Environmental Planning** Lincoln Allison,2021-11-21 Originally published in 1975 this was an entirely new approach to the study of environmental planning and problems Planning had hitherto been generally described as a technical exercise involving the solving of biological and economic problems In *Environmental Planning A Political and Philosophical Analysis* it is seen as an ideological activity and the development of planning in Britain and the nature of contemporary environment problems are analysed in terms of social and political theory The book discusses the nature of planning its relationship to politics and examines the groups and ideas which had been instrumental in its development It tries to determine how important the environment is to people and how decisions affecting planning are made In particular it looks at the theories and assumptions behind environmental policy suggests alternatives and describes the role played by participation and pressure groups in influencing planning in Britain at the time **New Trends in Urban Planning** Dan Soen,2013-10-22 *New Trends in Urban Planning Studies in Housing Urban Design and Planning* presents the trends in urban planning with a wide array of theory and practice in various countries This book deals with the overall problems facing urban planners in their striving at an enhanced quality of life in human settlements Organized into seven panels encompassing 29 chapters this book begins with an overview of the planning aspects of a general nature This text then highlights some of the important trends in the recent change of focus due to the view that the settlement is a better contemporary definition than urban planning Other chapters consider that the theory and practice of urban planning is found to be inadequate for the purpose of remedying deficiencies in urban areas The final chapter deals with the specific developments that are taking place in Israel and elsewhere This book is a valuable resource for teachers practitioners researchers administrators and politicians The Economics of Transport Appraisal A.J. Harrison,2017-04-21 This book first published in 1974 provides a comprehensive review of the application of economic concepts to the appraisal of transport systems It presents the basic economic ideas underlying their application to transport appraisal The exposition of these concepts links recent advances in economic theory to practical evaluation procedures The bulk of the book is concerned with how the basic concepts may be put to use Land and Limits Susan Owens,Richard Cowell,2011-03-17 This book explores the impact of an influential idea sustainable development on the institutions and practices governing use of land The new edition adds a Foreword by Professor John Forester as well as a substantial chapter by the authors in which they reflect on the arguments propounded in the book in the light of subsequent events **Directory of European political scientists** European Consortium for Political Research, University of Essex.
