**The Mathematics of the Modernist Villa** Michael J. Ostwald, Michael J. Dawes, 2018-04-12 This book presents the first detailed mathematical analysis of the social cognitive and experiential properties of Modernist domestic architecture The Modern Movement in architecture which came to prominence during the first half of the twentieth century may have been famous for its functional forms and machine made aesthetic but it also sought to challenge the way people inhabit understand and experience space Ludwig Mies van der Rohe's buildings were not

only minimalist and transparent they were designed to subvert traditional social hierarchies Frank Lloyd Wright's organic Modernism not only attempted to negotiate a more responsive relationship between nature and architecture but also shape the way people experience space Richard Neutra's Californian Modernism is traditionally celebrated for its sleek geometric forms but his intention was to use design to support a heightened understanding of context Glenn Murcutt's pristine pavilions seemingly the epitome of regional Modernism actually raise important questions about the socio spatial structure of architecture Rather than focussing on form or style in Modernism this book examines the spatial social and experiential properties of thirty seven designs by Wright Mies Neutra and Murcutt The computational and mathematical methods used for this purpose are drawn from space syntax isovist geometry and graph theory The specific issues that are examined include the sensory and emotional appeal of space and form shifting social and spatial structures in architectural planning wayfinding and visual understanding and the relationship between form and program Re-membering Villa de Monzie Jeffrey Hildner,1994 Concrete Peter Collins,2004 Collins provides a thorough history of the new nineteenth century material and goes on to examine the theories on its architectural expression focussing on determining role of the reinforced concrete frame He argues that Perret provides the first rational and effective expression of classical principles in modern construction Published in 1959 and out of print since 1975 this new edition of Concrete includes a foreword by Kenneth Frampton a scholarly introduction by R jean Legault and several additional essays on Perret by Peter Collins From the Foreword by Kenneth Frampton Concrete remains a valuable historical text that in many respects has never been given its due It is an unmatched pioneering history of the development of reinforced concrete up to 1914 It records and analyses the densely articulated if provincial English debate with respect to the aesthetic challenge posed by the increasing popularity of concrete from around 1870 onwards Finally until very recently it was the only readily available monograph on Auguste Perret in English In this regard it is particularly valuable as a thorough and perceptive assessment of Perret's life and career one that still stands as a point of departure for all current attempts to situate this seminal architect within the wider trajectory of twentieth century culture **Mathematical Thinking and Properties in Architecture** Ju Hyun Lee,Michael J. Dawes,Michael J. Ostwald,2025-06-30 This monograph explores the profound connections between architecture and mathematics through the works of Andrea Palladio Le Corbusier and Peter Eisenman Combining historical insights with computational analyses it examines the social spatial and aesthetic properties of twenty six iconic designs Advanced methods such as Space Syntax isovists fractal analysis image segmentation and semantic linguistic analysis reveal the mathematical principles underlying architectural thinking and properties Richly illustrated with over 100 visuals this volume is an essential resource for senior undergraduates postgraduates practicing architects and historians seeking a deeper understanding of mathematical thinking in architectural design and analysis **The Architecture of Ruins** Jonathan Hill,2019-03-25 The Architecture of Ruins Designs on the Past Present and Future identifies an alternative and significant history of architecture

from the sixteenth century to the twenty first century in which a building is designed occupied and imagined as a ruin This design practice conceives a monument and a ruin as creative interdependent and simultaneous themes within a single building dialectic addressing temporal and environmental questions in poetic psychological and practical terms and stimulating questions of personal and national identity nature and culture weather and climate permanence and impermanence and life and death Conceiving a building as a dialogue between a monument and a ruin intensifies the already blurred relations between the unfinished and the ruined and envisages the past the present and the future in a single architecture Structured around a collection of biographies this book conceives a monument and a ruin as metaphors for a life and means to negotiate between a self and a society Emphasising the interconnections between designers and the particular ways in which later architects learned from earlier ones the chapters investigate an evolving interdisciplinary design practice to show the relevance of historical understanding to design Like a history a design is a reinterpretation of the past that is meaningful to the present Equally a design is equivalent to a fiction convincing users to suspend disbelief We expect a history or a novel to be written in words but they can also be delineated in drawing cast in concrete or seeded in soil The architect is a physical novelist as well as a physical historian Like building sites ruins are full of potential In revealing not only what is lost but also what is incomplete a ruin suggests the future as well as the past As a stimulus to the imagination a ruin s incomplete and broken forms expand architecture s allegorical and metaphorical capacity indicating that a building can remain unfinished literally and in the imagination focusing attention on the creativity of users as well as architects Emphasising the symbiotic relations between nature and culture a building designed occupied and imagined as a ruin acknowledges the coproduction of multiple authors whether human non human or atmospheric and is an appropriate model for architecture in an era of increasing climate change

**The Le Corbusier Guide** Deborah Gans,2014-05-16 The Le Corbusier Guide presents the architecture of Le Corbusier The focus is on Paris given that it is his adopted city and the place where he came of age Within its environs is a representative sample of his built work It contains most of his purist houses and an early foray away from the crisp surfaces of Purism This itinerary follows the outlines of Le Corbusier s life s work Beginning at his birthplace in La Chaux de Fonds Switzerland the route continues to Paris to the perimeter of France and finally to the international scene architects architecture Paris Also presented are Le Corbusier s work in Switzerland Belgium Germany Italy United States Argentina Brazil Tunisia Iraq Japan USSR and India The itinerary includes not only the buildings but also the process of getting from one to the next On the open road it is a pleasure to remember Le Corbusier s own joy of self propulsion in the automobile efficiency and speed in the train and the thrill of flight as he experienced it with the poet of flight Antoine de Saint Exupery All these mimetic pleasures are ancillary to the experience of the buildings in situ in their complex relationship to local landscape national spirit and international vision

*Maekawa Kunio and the Emergence of Japanese Modernist Architecture* Jonathan M. Reynolds,2001-07-19 Japanese architecture s commanding presence on the

world stage can be traced to the struggles of earlier generations of Japan's modernist architects. This first book-length study of Maekawa Kunio (1905-1986) focuses on one of the most distinctive leaders in Japan's modernist architectural community. In a career spanning the 1930s to the 1980s, Maekawa's work and critical writing put him in the vanguard of the Japanese architectural profession. Jonathan Reynolds illuminates Maekawa's role as a bridge between prewar and postwar architecture in Japan, focusing particularly on how he influenced modernism's ambivalence regarding tradition and contemporary practice and the importance of technology in modernist design and ideology. Maekawa studied architecture at the prestigious Tokyo Imperial University before moving to Paris in 1928 to work with Le Corbusier. The latter experience had a powerful impact on Maekawa; he became an advocate for Le Corbusier and modernism when he returned to Japan two years later. Throughout his career, Maekawa designed residential, commercial, and government buildings in Japan and abroad. He became particularly well known internationally for his approach to public architecture, especially museums and public spaces such as the Tokyo Metropolitan Festival Hall. These projects illustrated the principles that earned Maekawa the respect and admiration of architects the world over. Carefully researched with numerous illustrations that complement discussions of Maekawa's principal projects, Reynolds's book will be welcomed in the fields of architecture and design. It will also attract readers interested in twentieth-century Japan for, in addition to highlighting Maekawa's architectural career, Reynolds portrays the broader cultural context within which Maekawa and other Japanese architects and artists sought to be heard and recognized.

**A Primer on Theory in Architecture** Karen Cordes Spence, 2016-12-01. A Primer on Theory in Architecture discusses how theory is defined in architecture, how it is identified, its location in larger perspectives or worldviews, its relationships to other areas in architecture, and how it can be constructed. The book explores the definition, elements, and characteristics of theory along with subjects associated with theory and how these associations are recognized. In addition, case studies tackle both individual theorists and common approaches to the topic. Aimed at the new student of architectural theory, if you are just beginning to tackle this subject, begin with this book.

**Le Corbusier** Stanislaus von Moos, 2009. Originally published in Germany in 1968, this first comprehensive and critical survey of Le Corbusier's life and work soon became the standard text on the architect and polymath. French, Spanish, English, Japanese, and Korean editions followed, but the book has now been out of print for almost two decades. In the meantime, Le Corbusier's archives in Paris have become available for research, resulting in an avalanche of scholarship. Von Moos's critical take and the basic criteria by which the subject is organized and historicized remain surprisingly pertinent in the context of this recent jungle of Corbusier studies. This new, completely revised edition is based on the 1979 version published in English by the MIT Press but offers a substantially updated body of illustrations. Each of the seven chapters is supplemented by a critical survey of recent scholarship on the respective issues. An updated edition of this acclaimed book, an essential read for students of architecture and architectural history.

**Shoah Presence: Architectural Representations of the Holocaust** Eran Neuman,2016-04-01 Through the analysis of several commemorative acts in space matter and image namely museums and memorials this book reflects on the ways in which architecture as a discipline a practice and a discourse represents the Holocaust In doing so it problematises how one presents an extreme historical case in a contemporary context and integrates the historical into actuality By examining several cases the book defines the issues faced by various architects who dealt with this topic and discusses their separate and distinctive approaches In each case it analyses the ways in which the cultural and political contexts of commemoration led to a different interpretation of the condition Focusing on the Ghetto Fighters House

the world's first Holocaust museum Yad Vashem Israel's national Holocaust memorial in Jerusalem the US Holocaust Memorial Museum in Washington and the Holocaust Memorial in Berlin the book discusses how the representation of history by architecture creates a dialectic process in which architecture mediates the past to the present while at the same time creating a present saturated with historical contexts It shows how together they are incorporated into one another and create a new reality past and present intertwined

**Analogical Thinking in Architecture** Jean-Pierre Chupin, 2023-07-27

This book provides an in depth exploration of the rich and persistent use of analogical thinking in the built environment Since the turn of the 21st century design thinking has permeated many fields outside of the design disciplines It is expected to succeed whenever disciplinary boundaries need to be transcended in order to think outside the box This book argues that these qualities have long been supported by analogical thinking an agile way of reasoning in which think the unknown through the familiar The book is organized into four case studies the first reviews analogical models that have been at the heart of design thinking representations from the 1960s to the present day the second investigates the staying power of biological analogies the third explores the paradoxical imaginary of analogous cities as a means of integrating contemporary architecture with heritage contexts while the fourth unpacks the critical and theoretical potential of linguistic metaphors and visual comparisons in architectural discourse Comparing views on the role of analogies and metaphors by prominent voices in architecture and related disciplines from the 17th century to the present the book shows how the analogical world of the project is revealed as a wide open field of creative and cognitive interactions These visual and textual operations are explained through 36 analogical plates which can be read as an inter text demonstrating how analogy has the power to reconcile design and theories
