Science for Students of Leather Technology R. Reed, 2016-05-03 Science for Students of Leather Technology is the first of a series of textbooks of leather science and technology designed to assist students at technical colleges and institutes as well as at universities The book begins with an introduction to leather manufacturing This is followed by separate chapters on the physical chemistry of solutions needed by students of leather manufacture types of macromolecules lipids and their use at various stages of leather manufacture and the principles of their use as surface agents Subsequent chapters deal with the general features of skin as an organ how the skins from different animals may develop their special characteristics common problems arising from insects and from micro organisms in leather manufacture and the structure and reactions of chromium complexes which are the most widely used tanning agents and modern views on the structure of the vegetable tannins and of the dyestuffs and pigments This book is intended for students with a variety of backgrounds Those whose chemical studies have not proceeded much beyond the elementary level will find considerable difficulty with some sections especially where the organic chemistry of complex molecules proteins carbohydrates dyes and vegetable tannins is described It is however possible to supplement the explanations given by reference to standard chemical textbooks using the subject matter of the present volume as a guide to those sections which would repay further study

Reconceptualizing the Nature of Science for Science Education Sibel Erduran, Zoubeida R. Dagher, 2014-08-20 Prompted by the ongoing debate among science educators over nature of science and its importance in school and university curricula this book is a clarion call for a broad reconceptualizing of nature of science in science education The authors draw on the family resemblance approach popularized by Wittgenstein defining science as a cognitive epistemic and social institutional system whose heterogeneous characteristics and influences should be more thoroughly reflected in science education They seek wherever possible to clarify their developing thesis with visual tools that illustrate how their ideas can be practically applied in science education The volume's holistic representation of science which includes the aims and values knowledge practices techniques and methodological rules as well as science's social and institutional contexts mirrors its core aim to synthesize perspectives from the fields of philosophy of science and science education The authors believe that this more integrated conception of nature of science in science education is both innovative and beneficial They discuss in detail the implications for curriculum content pedagogy and learning outcomes deploy numerous real life examples and detail the links between their ideas and curriculum policy more generally
