phrasal or the lexical level and the question whether abstract non visible entities should play a role in syntactic analyses It is shown that the analyses suggested in the respective frameworks are often translatable into each other The book closes with a chapter showing how properties common to all languages or to certain classes of languages can be captured The book is a translation of the German book Grammatiktheorie which was published by Stauffenburg in 2010 This book is a new edition of <http://langsci.press.org/catalog/book/25> <http://langsci.press.org/catalog/book/195> and <http://langsci.press.org/catalog/book/255>

Grammatical theory: From transformational grammar to constraint-based approaches (Fifth revised edition) Stefan Müller, 2023-01-23 This book introduces formal grammar theories that play a role in current linguistic theorizing Phrase Structure Grammar Transformational Grammar Government Binding Generalized Phrase Structure Grammar Lexical Functional Grammar Categorical Grammar Head Driven Phrase Structure Grammar Construction Grammar Tree Adjoining Grammar The key assumptions are explained and it is shown how the respective theory treats arguments and adjuncts the active passive alternation local reorderings verb placement and fronting of constituents over long distances The analyses are explained with German as the object language The second part of the book compares these approaches with respect to their predictions regarding language acquisition and psycholinguistic

plausibility The nativism hypothesis which assumes that humans possess genetically determined innate language specific knowledge is critically examined and alternative models of language acquisition are discussed The second part then addresses controversial issues of current theory building such as the question of flat or binary branching structures being more appropriate the question whether constructions should be treated on the phrasal or the lexical level and the question whether abstract non visible entities should play a role in syntactic analyses It is shown that the analyses suggested in the respective frameworks are often translatable into each other The book closes with a chapter showing how properties common to all languages or to certain classes of languages can be captured

Head-Driven Phrase Structure Grammar Stefan Müller, Anne Abeillé, Robert D. Borsley, Jean-Pierre Koenig, 2024-11-07 Head Driven Phrase Structure Grammar HPSG is a constraint based or declarative approach to linguistic knowledge which analyses all descriptive levels phonology morphology syntax semantics pragmatics with feature value pairs structure sharing and relational constraints In syntax it assumes that expressions have a single relatively simple constituent structure This volume provides a state of the art introduction to the framework Various chapters discuss basic assumptions and formal foundations describe the evolution of the framework and go into the details of the main syntactic phenomena Further chapters are devoted to non syntactic levels of description The book also considers related fields and research areas gesture sign languages computational linguistics and includes chapters comparing HPSG with other frameworks Lexical Functional Grammar Categorical Grammar Construction Grammar Dependency Grammar and Minimalism

Modular Design of Grammar I Wayan Arka, Ash Asudeh, Tracy Holloway King, 2021 This volume presents the latest research in linguistic modules and interfaces in Lexical Functional Grammar It draws on data from a range of typologically diverse languages including Arabic Icelandic Kelabit Polish and Urdu and will be of interest to all those working on linguistic interfaces from a variety of theoretical standpoints

Groupware: Design, Implementation, and Use Jörg M. Haake, Jose A. Pino, 2002-08-14 Welcome to the 8th International Workshop on Groupware CRIWG 2002 The previous workshops took place in Lisbon Portugal 1995 Puerto Varas Chile 1996 El Escorial Spain 1997 B zios Brazil 1998 Cancun Mexico 1999 Madeira Portugal 2000 and Darmstadt Germany 2001 CRIWG workshops follow a simple recipe for success good papers a small number of participants extensive time for lively and constructive discussions and a high level of cooperation both within and between paper sessions CRIWG 2002 continued this tradition CRIWG 2002 attracted 36 submissions from 13 countries nine of them outside Ibero America Each of the 36 articles submitted was reviewed by at least three members of an internationally renowned Program Committee This year we used a double blind reviewing process i e the reviewers did not know who the authors of the papers were In addition the reviewers were chosen based on their expertise and we also ensured that they came from countries and institutions not related to those of the paper s authors This reviewer assignment worked remarkably well as indicated by the high average confidence value the reviewers gave their own reviews This means that papers were usually reviewed by experts in the paper s topic As a

consequence reviews were usually quite extensive and contained many suggestions for improvements I would like to thank all the members of the Program Committee for their hard work which I am sure contributed to improving the quality of the final articles

Finite-state Methods and Natural Language Processing Thomas Hanneforth, 2008 *Probabilistic Linguistics* Rens Bod, Jennifer Hay, Stefanie Jannedy, 2003-04-08 For the past forty years linguistics has been dominated by the idea that language is categorical and linguistic competence discrete It has become increasingly clear however that many levels of representation from phonemes to sentence structure show probabilistic properties as does the language faculty Probabilistic linguistics conceptualizes categories as distributions and views knowledge of language not as a minimal set of categorical constraints but as a set of gradient rules that may be characterized by a statistical distribution Whereas categorical approaches focus on the endpoints of distributions of linguistic phenomena probabilistic approaches focus on the gradient middle ground Probabilistic linguistics integrates all the progress made by linguistics thus far with a probabilistic perspective This book presents a comprehensive introduction to probabilistic approaches to linguistic inquiry It covers the application of probabilistic techniques to phonology morphology semantics syntax language acquisition psycholinguistics historical linguistics and sociolinguistics It also includes a tutorial on elementary probability theory and probabilistic grammars

Logic, Language, and Computation Balder D. ten Cate, Henk W. Zeevat, 2007-09-04 Edited in collaboration with FoLLI the Association of Logic Language and Information this book represents the thoroughly refereed post proceedings of the 6th International Tbilisi Symposium on Logic Language and Computation TbiLLC 2005 held in Batumi Georgia The 19 revised full papers presented were carefully reviewed and selected from numerous presentations at the symposium The papers present current research in all aspects of linguistics logic and computation

Participles in Rigvedic Sanskrit John Jeffrey Lowe, 2015 This book examines several thousand examples of tense aspect stem participles in the Rigveda and the passages in which they appear in terms of both their syntax and semantics The Rigveda is an ancient collection of sacred Indian hymns written in Vedic Sanskrit and is one of the oldest extant texts in any Indo European language It is also a poetic text in which deliberate obscurity is the governing aesthetic and in which the rules of language are pushed to their limits in order to produce the ideal poetic expression Many Vedic sentences are of controversial disputed meaning and Vedic scholarship is thus fraught with controversy John J Lowe applies formal linguistic analysis to the data and produces a comprehensive formal model of how participles are used The author uses his findings to recategorize the data by defining certain stems and stem types as outside the synchronic category of participle on the basis of their syntactic and semantic properties He suggests alternative sources for these forms and considers the linguistic processes that transformed old participles into non participial entities In his conclusion he reassesses the category of participles within the verbal and nominal systems looks at their prehistory in Proto Indo European and describes their universal typological characteristics Among his conclusions are that tense aspect stem participles have the technical properties of adjectival verbs not verbal

adjectives and that such participles are not fully dependent on corresponding finite verbal forms That is a perfect participle for example need not share all the semantic and functional features of the finite perfect forms built to the same stem These and many other conclusions drawn either directly challenge or radically revise received opinion and recent work

Syntactic Wordclass Tagging H. van Halteren, 2013-03-14 In both the linguistic and the language engineering community the creation and use of annotated text collections or annotated corpora is currently a hot topic Annotated texts are of interest for research as well as for the development of natural language processing NLP applications Unfortunately the annotation of text material especially more interesting linguistic annotation is as yet a difficult task and can entail a substantial amount of human involvement All over the world work is being done to replace as much as possible of this human effort by computer processing At the frontier of what can already be done mostly automatically we find syntactic wordclass tagging the annotation of the individual words in a text with an indication of their morpho syntactic classification This book describes the state of the art in syntactic wordclass tagging As an attempt to give an overall view of the field this book is of interest to at least two possibly very different types of reader The first type consists of those people who are using or are planning to use tagged material and taggers They will want to know what the possibilities and impossibilities of tagging are but are not necessarily interested in the internal working of automatic taggers This on the other hand is the main interest of our second type of reader the builders of automatic taggers and other natural language processing software
