A Source Book Of Gestalt Psychology Willis D Ellis, 2013-09-05 This is Volume II of twenty one in a series of Cognitive Psychology Originally published in 1938 The war differences of tongue sentiment and background all contributed towards making it difficult for English speaking readers to welcome what they were the experimental methods and results of certain German psychologists The gap thus created was not bridged until very recent times notably by the publication in 1935 of Professor K Koffka's Principles of Gestalt Psychology Even this important work however does not wholly effect the necessary transition from the German psychology of 1912 to the present day and Professor Koffka himself mentions this in a Preface footnote of his book The present volume is offered in the hope that it may play a part in completing the structure A Source Book of Gestalt Psychology Willis D. Knapp, Lynn C. Robertson, 2016-07-15 To the vast majority of academic psychologists in the 1980s the study of cognition referred to that area of psychology known as cognitive psychology The major basis of this area had been the computer metaphor with its accompanying notion of the individual as an information processing system Yet within the field the study of cognition is much broader and has a history

that reaches into antiquity whereas cognitive psychology as information processing psychology had only recently become the standard bearer of cognitive studies One of the purposes of this volume originally published in 1986 was to articulate some of the fundamental distinctions between and concordances among different orientations concerning the study of cognition The collection includes chapters on information processing ecological Gestalt physiological and operant psychology

Design Technics Zeynep Çelik Alexander, John May, 2020-01-21 Leading scholars historicize and theorize technology's role in architectural design Although the question of technics pervades the contemporary discipline of architecture there are few critical analyses on the topic Design Technics fills this gap arguing that the technical dimension of design has often been flattened into the broader celebratory rhetoric of innovation Bringing together leading scholars in architectural and design history the volume's contributors situate these tools on a broader epistemological and chronological canvas The essays here construct histories some panoramic and others unfolding around a specific episode of seven techniques regularly used by the designer in the architectural studio today rendering modeling scanning equipping specifying positioning and repeating Starting with observations about the epistemological changes that have unfolded in the discipline in recent decades but seeking to offer a more expansive meaning for technics the volume casts new light on concepts such as form experience and image that have played central roles in historical architectural discourses Among the questions addressed How was the concept of form immanent in practices of scanning since the late nineteenth century What was the historical relationship between rendering and experience in Enlightenment discourses How did practices of specifying reconfigure the distinction between intellectual and manual labor What kind of rationality is inherent in the designer's constant clicking of the mouse in front of her screen In addressing these and other questions this engaging and timely collection thereby proposes technics as a site for historical and philosophical reflection not only for those engaged in architectural design but also for any scholar working in the humanities today Contributors Lucia Allais Edward Eigen Orit Halpern John Harwood Matthew C Hunter and Michael Osman
