Decision Support System for the Location of Healthcare Facilities Marta Dell'Ovo, Alessandra Oppio, Stefano Capolongo, 2020-08-19 The book examines an integrated approach for addressing decisions about the location of healthcare facilities Supported by Geographic Information Systems GIS and Multi Criteria Decision Analysis MCDA the approach provides comprehensive information on territory taking into account the spatial dimensions Due to the multiple criteria involved site selection for urban facilities is a crucial topic in planning decision processes especially for healthcare facilities Healthcare provision policies generally fail to address the distribution of facilities within cities entrusting decisions to various stakeholders Moreover current evaluation tools focus on the intrinsic performances of healthcare structures disregarding the extrinsic characteristics namely those related to the location Starting with a cross disciplinary literature review the book describes a multi methodological approach for decision making regarding the location of healthcare facilities and presents an innovative evaluation tool that simultaneously considers functional locational environmental and economic issues providing a comprehensive overview of the areas under investigation

Decision Making in Healthcare Systems Tofigh Allahviranloo, Farhad Hosseinzadeh Lotfi, Zohreh Moghaddas, Mohsen Vaez-Ghasemi, 2023-12-31 This book chooses the topic which is due to the editors experience in modeling projects in healthcare systems Also the transfer of experiences is the reason why mathematical modeling and decision making in the field of health are not given much attention To this end the new aspect of this book is the lack of

Engineering the System of Healthcare Delivery William B. Rouse, Denis A. Cortese, 2010 As the United States continues to debate reform of its healthcare system this book argues that providing health insurance for all without improving the delivery system will not improve the current problems of access affordability and quality The US healthcare system has many excellent components strong scientific input extraordinary technology for diagnosis and treatment dedicated staff and top class facilities among them But the system has evolved haphazardly over time and although it has not failed entirely the authors argue that like any system where attention is paid to individual components at the expense of the system as a whole it can never hope to succeed Above all they point out that the US system does not provide high value healthcare it has the highest costs in the world and yet many other countries have lower infant mortality rates and better life expectancy Together with a team of highly regarded thought leaders the authors of this publication advocate a complete re thinking of healthcare from a systems perspective an engineering approach to healthcare and they then describe how to set about it Covering a wide range of subjects including health care costs and economics barriers to change integrated health systems electronic records and computer based patient support as well as patient safety and palliative and chronic care this book will be of interest to all those involved in healthcare provision whose goal is affordable care to promote healthy high quality lives
