Mendes, 2013-11 We live in a world of networks where everything is amazingly close to everything else The notion of network turns out to be central to our times the Internet and WWW are changing our lives our physical existence is based on various biological networks we are involved in all enveloping networks of economic and social relations Only in the 1990s did physicists begin to explore real networks both natural and artificial as evolving systems with intriguingly complex and effective architectures Progress has been so immediate and astounding that we actually face a new science based on a new set of concepts and one may even say on a new philosophy the natural philosophy of a small world Old ideas from mathematics statistical physics biology computer

science and so on take on quite new forms in applications to real evolving networks What is common to all networks What are the general principles of the organization and evolution of networks How do the laws of nature work in communication biological and social networks What are networks This book written by physicists answers these questions and presents a general insight into the world of networks Network Models in Finance Gueorgui S. Complex Artificial Environments Juval Portugali, 2006-01-19 Juval Portugali The notion of complex artificial environments CAE refers to theories of complexity and self organization as well as to artifacts in general and to artificial environments such as cities in particular The link between the two however is not trivial For one thing the theories of complexity and self organization originated in the hard science and by reference to natural phenomena in physics and biology The study of artifacts per contra has traditionally been the business of the soft disciplines in the humanities and social sciences The notion of complex artificial environments thus implies the supposition that the theories of complexity and self organization together with the mathematical formalisms and methodologies developed for their study apply beyond the domain of nature Such a position raises a whole set of questions relating to the nature of 21 century cities and urbanism to philosophical issues regarding the natural versus the artificial to the methodological legitimacy of interdisciplinary transfer of theories and methodologies and to the implications that entail the use of sophisticated state of the art artifacts such as virtual reality VR cities and environments The three day workshop on the study of complex artificial environments that took place on the island of San Servolo Venice during April 1-3 2004 was a gathering of scholars engaged in the study of the various aspects of CAE

Handbook of Graphs and Networks Stefan Bornholdt, Heinz Georg Schuster, 2006-03-06 Complex interacting networks are observed in systems from such diverse areas as physics biology economics ecology and computer science For example economic or social interactions often organize themselves in complex network structures Similar phenomena are observed in traffic flow and in communication networks as the internet In current problems of the Biosciences prominent examples are protein networks in the living cell as well as molecular networks in the genome On

larger scales one finds networks of cells as in neural networks up to the scale of organisms in ecological food webs This book defines the field of complex interacting networks in its infancy and presents the dynamics of networks and their structure as a key concept across disciplines The contributions present common underlying principles of network dynamics and their theoretical description and are of interest to specialists as well as to the non specialized reader looking for an introduction to this new exciting field Theoretical concepts include modeling networks as dynamical systems with numerical methods and new graph theoretical methods but also focus on networks that change their topology as in morphogenesis and self organization The authors offer concepts to model network structures and dynamics focussing on approaches applicable across disciplines
