Smart Adaptive Systems On Silicon:

Smart Adaptive Systems on Silicon Maurizio Valle, 2013-06-05 Intelligent smart systems have become common practice in many engineering applications. On the other hand, current low cost standard CMOS technology and future foreseeable developments make available enormous potentialities. The next breakthrough will be the design and development of smart adaptive systems on silicon, i.e. very power and highly size efficient complete systems, i.e. sensing, computing and actuating actions with intelligence on board on a single silicon die. Smart adaptive systems on silicon will be able to adapt autonomously to the changing environment and will be able to implement intelligent behaviour and both perceptual and cognitive tasks. At last, they will communicate through wireless channels; they will be battery supplied or remote powered via inductive coupling and they will be ubiquitous in our every day life. Although many books deal with research and engineering topics, i.e. algorithms, technology implementations etc, few of them try to bridge the gap between them and to address the issues related to feasibility, reliability and applications. *Smart Adaptive Systems on Silicon* though not exhaustive, tries to fill this gap and to give answers mainly to the feasibility and reliability issues. *Smart Adaptive Systems on Silicon* mainly focuses on the analog and mixed mode implementation on silicon because this approach is amenable of achieving impressive energy and size efficiency. Moreover, analog systems can be more easily interfaced with sensing and actuating devices. **Smart**

Adaptive Systems Exist? Bogdan Gabrys, Kauko Leiviskä, Jens Strackeljan, 2006-07-11 *Do Smart Adaptive Systems Exist* is intended as a reference and a guide summarising and focusing on best practices when using intelligent techniques and building systems requiring a degree of adaptation and intelligence. It is therefore not intended as a collection of the most

recent research results but as a practical guide for experts from other areas and industrial users interested in building solutions to their problems using intelligent techniques One of the main issues covered is an attempt to answer the question of how to select and or combine suitable intelligent techniques from a large pool of potential solutions Another attractive feature of the book is that it brings together experts from neural network fuzzy machine learning evolutionary and hybrid systems communities who will provide their views on how these different intelligent technologies have contributed and will contribute to creation of smart adaptive systems of the future
