Terry Froman,2007 Because 3rd Grade Florida Comprehensive Assessment Test FCAT scores have a direct impact on  
promotion the results for that grade level are released early by the State When the FCAT results for 3rd Grade were released  
in May 2007 many people were troubled Over 80% of the elementary schools in the Miami Dade School District showed a  
decrease in the percentage of students scoring in Levels 3 and above in Reading Similar trends produced an outcry across  
the state After an 8 percentage point jump in the previous year there was a statewide drop of 6 percentage points in 2007  
These results were more than surprising and cast doubt on the soundness of the scoring process After a careful review the  
Education Commissioner announced that there did appear to be a problem in the scoring of the test and a rescaling of the  
3rd Grade FCAT reading exam would be forthcoming This admission by the State while honorable and praiseworthy opened  
the door for many to question other aspects of the FCAT test sometimes without just cause While it is clearly unfair to  
discount the overall precision and usefulness of the FCAT some form of careful review of scores is nonetheless proper The  
search for the same kind of irregular trends in the data that brought this type of problem to the surface is always warranted  
and should be welcomed Any abnormalities revealed in the examination of the scores need to be made public so that the need  
for in depth analysis can be considered It is in that spirit that this paper presents some unusual patterns in the data for FCAT
