Collision and Collapse at the Africa-Arabia-Eurasia Subduction Zone \ Douwe J. J. van Hinsbergen, Michael A. Edwards, Rob Govers, 2009 The Mediterranean and northern Arabian regions provide a unique natural laboratory to constrain geodynamics associated with arc-continent and continent-continent collision and subsequent orogenic collapse by analysing regional and temporal distributions of the various elements in the geological archive This book combines thirteen new contributions that highlight timing and distribution of the Cretaceous to Recent evolution of the Calabrian-Carpathian-Aegean and Anatolian segments of the Africa-Arabia-Eurasia subduction zone These are subdivided into five papers documenting the timing and kinematics of Cretaceous arc-continent collision and Eocene and Miocene continent-continent collision in Anatolia with westward extrusion of Anatolia as a result Eight papers provide an overview and new data from stratigraphy, structure, metamorphism and magmatism covering the geological consequences of the largely Neogene collapse that characterizes the segments of interest in response to late stage reorganization of the subduction zone and the roll-back and break-off of segments of the subducting slab

Prehistory of the Paximadi Peninsula, Euboea Tracey Cullen, William R. Farrandy, Lia Karamali, Donald R. Keller, Lauren E. Talalay, 2013-10-15 The results of two related fieldwork projects are presented: a brief salvage excavation at Plakari, a Final Neolithic site near the modern town of Karystos, and a survey of prehistoric sites on the Paximadi peninsula, the western arm of the Karystos bay, both located in southern Euboea These ventures were part of the larger mission of the Southern Euboea Exploration Project (SEEP), a multidisciplinary research program dedicated to the study of the Karystian past and which maintained a presence in southern Euboea for over 25 years These projects have found that contrary to what archaeologists once believed, southern Euboea was hardly an uninhabited and isolated region in prehistory The inhabitants actively participated in the expanded maritime and social landscape that characterized the later Neolithic and Early Bronze Age in the Aegean, taking part in exchange networks of stone, ceramics, marble, figurines and vessels and possibly agricultural goods and metalwork

The South Aegean Active Volcanic Arc M. Fytikas, G. Vougioukalakis, 2005-09-13 This book is a collection of 22 selected papers from the homonymous Conference held in September 2003, Milos, Greece The aim of the conference was to serve as a forum for the presentation and constructive discussion of the state of the art and emerging issues on the South Aegean Volcanic Arc In the first part of the book, the tectonic-geodynamic setting and the present upper-mantle structure of the Aegean area are discussed It includes an interesting interpretation of data on the spatial distribution of intermediate focal depth earthquakes, fault plane solutions and deep velocity structures to further investigate active tectonics related to the deep structure of the southern Aegean volcanic arc The second part deals with general volcanological

petrological and tectonic characteristics of the SAAVA presenting an extensive review of volcanological chemical isotope and tectonic data using a large amount of new field and laboratory data Interesting conclusions are presented regarding the present volcanic associations the volcanic fields location and shape in respect to the large tectonic lineaments and the plate motions the source of the SAAVA parental magmas Presented in the third part is an extensive review on the volcanic hazard assessment and the monitoring state of the SAAVA centers Seismic and geodetic monitoring of the Santorini volcano and the recent 1995 1998 crisis of Nisyros volcano are presented and discussed The last part deals with hydrothermal deposits and processes in the SAAVA as well as products and processes in adjacent areas with a particular interest and significance that link them to the SAAVA processes Systematic re evaluation on the geodynamic and tectonic setting of the Aegean active volcanic centers Thorough review with new data and ideas on the magma source region the magma differentiation processes in both the deep and shallow levels and the volcanological processes related both to the magma composition and storage depth as well as to the tectonic regime of the volcano growth area Up to date estimation of the volcanic hazard in the Aegean area and a detailed presentation of the present state and the monitoring efforts of the South Aegean active centers

Boyd,2017-01-04 The sculpture of the early bronze age Cyclades has been systematically studied since the time of Christos Tsountas at the end of the 19th century But that study has been hampered by the circumstance that so many of the subsequent finds come from unauthorized excavations where the archaeological context was irretrievably lost Largely for that reason there are still many

problems surrounding the chronology the function and the meaning of Early Cycladic sculpture This lavishly illustrated and comprehensive reassessment sets out to rectify that situation by publishing finds which have been recovered in controlled excavations in recent years as well as earlier finds for which better documentation can now be provided Using the material from recent excavation projects and drawing on the papers presented at a symposium held in Athens in 2014 it is possible now to undertake a fresh overview of the entire body of sculpture from the Cycladic islands which has been found in secure archaeological contexts Beginning with early examples from Neolithic settlement sites and extending into a consideration of material found in later contexts the 35 chapters are divided into sections which examine sculpture from settlements cemeteries and the sanctuary at Kavos concluding with a discussion of material techniques and aspects of manufacture
