Soviet Architecture Anatole Senkevitch, 1987 **Archives in Russia: A Directory and Bibliographic Guide to Holdings in Moscow and St. Petersburg** Patricia Kennedy Grimsted, Patricia Kennedy Grimstead, 2016-04-01 This is a comprehensive directory and bibliographic guide to Russian archives and manuscript repositories in the capital cities of Moscow and St. Petersburg. It is an essential resource for any researcher interested in Russian sources for topics in diplomatic, military, and church history, art, dance, film, literature, science, ethnography, and geography. The first part lists general bibliographies of relevant reference literature, directories, bibliographic works, and specialized subject-related sources. In the following sections of the directory, archival listings are grouped in institutional categories. Coverage includes federal, ministerial, agency, presidential, local, university, Academy of Sciences, organizational, library, and museum holdings. Individual entries include the name of the repository in Russian and English, basic information on location, staffing, institutional history, holdings, access, and finding aids. More comprehensive and up to date than the 1997 Russian Version, this edition includes Web site information, dozens of additional repositories, several hundred more bibliographical entries, coverage of reorganization issues, four indexes, and a glossary.

Encyclopedia of Twentieth Century Architecture R. Stephen Sennott, 2004 A balance of sophistication and clarity in the writing, authoritative entries, and strong cross-referencing that links architects and structures to entries on the history and theory of the profession make this an especially useful source on a century of the world's most notable architecture. The contents feature major architects, firms, and professional issues, buildings, styles, and sites, the architecture of cities and countries, critics and historians, construction materials and planning topics, schools, movements, and stylistic and theoretical terms. Entries include well-selected bibliographies and illustrations. Reference that rocks American Libraries May 2005 **History of Architectural Theory** Hanno-Walter Kruft, 1994 As the first comprehensive encyclopedic survey of Western architectural theory from Vitruvius to the present, this book is an essential resource for architects, students, teachers, historians, and theorists. Using only original sources, Kruft has undertaken the monumental task of researching, organizing, and analyzing the significant statements put forth by architectural theorists over the last two thousand years. The result is a text that is authoritative and complete, easy to read without being reductive.

Ways to Study and Research Urban, Architectural and Technical Design T.M. de Jong, D.J.M. van der Voordt, 2005-12-31 How can we develop a scientific basis for architectural, urban, and technical design? When can a design be labelled as scientific output comparable with a scientific report? What are the similarities and dissimilarities between design and empirical research, and between design research, typological research, design study, and study by design? Is there a need for a particular methodology for design-driven study and research? With these questions in mind, more than forty members of the Faculty of Architecture of the Delft University of Technology have described their ways of study and research. Each chapter shows the objectives, the methodology, and its implementation in search for a deeper knowledge of design processes.

and an optimal quality of the design itself The authors among them architects urban planners social scientists lawyers technicians and information scientists have widely differing backgrounds Nevertheless they share a great deal The central focus is a better understanding of design processes design tools and the effects of design interventions on issues such as utility aesthetics meaning sustainability and feasibility

Constructivist Architecture in the USSR Anatole Kopp, 1985 *Re-Framing Identities* Ákos Moravánszky, Torsten Lange, 2016-12-19 From 1970 1990 architecture experienced a revision as part of the post modern movement The critical attitude to the functionalistic Moderne style and the influence of semiotics and philosophical trends such as phenomenology on architectural theory led to an increased interest in its history expression perception and context In addition architectural heritage and the care of architectural monuments gained importance This development also increasingly challenged the ideologically based division between East and West Instead of emphasizing the differences the search was for a joint cultural heritage The contributions in this volume question terms such as Moderne and post modern and show how architecture could again represent local regional and national identity
