Raw Materials, Energy and Western Security Hanns W. Maull, 1984-12-05 **Western Security**, 1989 **Energy, Minerals, and Western Security** Hanns Maull, 1984 **The Internal Fabric of Western Security** Gregory Flynn, 2025-03-03

Changes in domestic economic and political conditions together with a loss of confidence in the United States leadership produced serious problems within the Atlantic Alliance. The Internal Fabric of Western Security first published in 1981 examines the effects of domestic change upon perceived security requirements and explores ways to deal with the problems that developed. Beginning with an examination of Allied and European relations, the book outlines external challenges to security that the Alliance faces in the 1980s and discusses internal problems that affect member nations' ability to deal with them. Country studies of the four largest European members of the Alliance systematically examine domestic constraints on security policy and assess probable approaches for the 1980s. A more general analysis is offered on how this situation affects the Allies' ability to work together in dealing with their common security problems. The need to integrate economic and military requirements is also discussed.

Semialignment and Western Security Nils Ørvik, 2021-01-26

This book first published in 1986 is a major study of semialignment and a review of the individual nations within NATO to which the model could be applied. Towards the end of the Cold War, there arose within NATO this intermediate category between alignment and nonalignment whereby a member state enjoyed the status and facilities of NATO membership while disassociating itself from certain NATO programmes. This book analyses the phenomenon and the possibility that it weakened the credibility of NATO deterrence and the defence posture versus the Soviet Union.

Fuel and Power Jeronim Perović, 2024-06-27

This is a very timely study of Russia's development into a global energy power from the Russian Revolution to the present day. Beginning in the late nineteenth century, Russia emerged not only as a key producer but also as one of the world's leading exporters of oil. Russia's transformation into a modern global power was connected to its ability to make use of its vast natural resources and produce energy in increasing quantities. While the development of Russia's energy industry went hand in hand with a profound socio-political and economic transformation, the book also tells the story of international cooperation and competition, transnational exchanges and transborder interdependencies. Through energy exports, Russia shaped global energy flows and connections at the same time the growth of international trade impacted the views and decisions of Russian leaders affecting the fabric of the country's foreign relations and ultimately the course of Russian history.
