3 edge methods and theory I turn now to some of my own reflections on this score Some Reflections My first proposition is that if we are interested in analyzing the performance and dynamic properties of the world s economies it is only at significant peril that comparative economists can overlook noneconomic or political factors This is not to say that it is illegitimate to abstract from non economic factors for particular purposes rather such abstraction should occur only with cogni zance of the influences being suppressed I have argued elsewhere that the analytical compromise in suppressing noneconomic variables is greater for the study of planned than for market economies 7 Borrowing from Polanyi 8 it is claimed that in market sys tems the economic sphere is disembedded from separate and not subordinate to the political social and cultural spheres while in planned systems the economic sphere is embedded in the noneconomic spheres To be sure market economies are strongly affected by political and cultural factors but planned economies have and often exercise the potential to let political goals dominate in making production allocational or distributional choices Indeed it is difficult in practice to separate out what are political and what are economic decisions in planned systems

The Economic Theory of Socialism and the Labour-managed Firm Bruno Jossa,Gaetano Cuomo,1997 The Economic Theory of Socialism and the Labour Managed Firm focuses on market socialism and the relevant debate among economic theorists It argues that market socialism is the only rational form of socialism and that market socialism with labour managed firms is by far the best form of market socialism The book begins with a critical review of the contributions to the economic theory of socialism The second part discusses the economic theory of labour managed firms and pays particular attention to the adverse labour supply curve underinvestment monitoring and the separation of ownership and control The final chapters discuss problems such as the control of economic activity in labour managed firms worker motivation and incentives This book will be of particular use to students and academics interested in comparative economic systems and to specialists in politics and sociology with an interest in alternative forms of economic organization
