Reducing the Mortality Gap in People with Severe Mental Disorders: the Role of Lifestyle Psychosocial Interventions Andrea Fiorillo, Maurizio Pompili, Mario Luciano, Norman Sartorius, 2019-10-15 Patients with severe mental disorders SMD including major depression bipolar disorder schizophrenia and related spectrum disorders have a reduced life expectancy of 10-25 years compared with the general population This life expectancy gap is mainly due to the co occurrence of many physical diseases such as hypertension coronary heart disease stroke chronic obstructive pulmonary disease tuberculosis hepatitis and HIV Factors contributing to the reduced life expectancy can be grouped into three main categories a factors related to the patient b factors related to clinicians and c factors related to the health system As regards the first group patients with SMD often adopt unhealthy lifestyle behaviors including heavy smoking reduced physical activity sedentary behaviors poor diet and alcohol or drug abuse and are reluctant to seek for physical care with GPs and other medical specialists Increasing the levels of physical activity improving the dietary patterns and reducing the smoking habits of people with severe mental disorders represent a global health challenge and a public health priority Until now attempts made to reduce this mortality gap have acted at three different levels health system level physician level and patient level The third level interventions include electronic alerts through smartphones and web based platforms intensive case management promotion of healthy habits complex psychosocial interventions Several population based studies have showed that lifestyle behaviors are amenable to change through the adoption of specific psychosocial interventions However most clinical guidelines although emphasizing

the importance of health monitoring and regular check ups for patients with severe mental illnesses do not make specific recommendations on the provision of lifestyle interventions These lifestyle oriented interventions consisting of behavioral educational and psychological components have been conducted mainly in research settings and have shown a good impact on patients physical health Despite this their feasibility in routine settings has not been tested yet It seems to be clinically and ethically relevant to develop validate and carry out interventions to improve the lifestyle s behaviors of patients with severe mental disorders to reduce the presence of comorbidities and to improve their life expectancy In this Research Topic we will summarize the available knowledge of the efficacy and effectiveness of psychosocial interventions aimed at improving healthy lifestyle behaviors and promoting the physical health of patients with severe mental disorders Total number of articles 19

Long-term Treatment of Depression Stuart A. Montgomery, F. Rouillon, 1992-06-16 Depression is a very common disorder which often has a chronic and recurrent pattern It is therefore important to establish that the efficacy and safety of the selected treatment is maintained in the long term and that treatments are able to reduce both relapses and the risk of new episodes This is the first major volume which provides a comprehensive and authoritative account of all aspects of the long term treatment of depressive illness At the same time it points out that prophylactic studies have only just begun to separate effective from ineffective treatments and to identify whether particular treatments reduce the risk of new episodes or merely delay them It will be of value to all practising psychiatrists and physicians with clinical or research interests in depressive illness
