Sociobiology The New Synthesis:

Sociobiology Edward O. Wilson, 2000-03-24 When this classic was first published in 1975 it created a new discipline and started a tumultuous round in the nature versus nurture debate In the introduction to this edition Wilson shows how research in human genetics and neuroscience over the past quarter of a century has strengthened the case for a biological understanding of human nature

Final Solutions Richard M. Lerner, R. C. Lewontin, Benno Muller-Hill, 2010-11 The nature nurture debate continues to stir controversy in the social and behavioral sciences How much of human behavior and development can be attributed to biology and how much to the environment Can either be said to determine human development And what are the implications of each view for society In this important study a noted developmental psychologist contributes to this debate by confronting the difficult issue of doctrines of human development and the consequences for society of deriving political programs and public policy from them Beginning with the premise that scientific ideas are not neutral but can be used for either good or evil Richard Lerner considers the recent history of one such idea biological determinism which at times has had the backing of respected scientists intellectuals and political leaders During this century biological determinism has been coupled with political philosophies that hold that some people are inherently better than others This has meant that certain groups of people Jews Blacks Native Americans women have been stigmatized because of supposedly innate even biological differences with sometimes disastrous consequences The most notorious instance was Nazi Germany where racial science given legitimacy by the scientific community became a cornerstone of the Nazi Final Solution Meanwhile theories of biological determinism continue to find adherents within the scientific community Konrad Lorenz who was awarded a Nobel Prize in 1973 was a critical figure in the development of the most recent manifestation of biological determinism sociobiology Lerner examines the work of Lorenz and current sociobiologists and the implications of their claims for modern society He fears that biological determinism may again be co-opted to serve the political agenda of today's reactionary politicians In fact Lerner notes sociobiologists have had to face the fact that organizations such as the fascist National Front party in Britain and its counterparts in France and the United States have selectively seized upon sociobiology to fuel their notions of genetically superior and inferior races

Sociobiology: Beyond Nature/nurture? George W Barlow, James Silverberg, Frank B Livingstone, 2019-06-26 To most biologists sociobiology represents the concept of strict Darwinian individual selection married to an analytical application of ecological principles and brought to bear on social behavior in an unusually exciting and productive way Joining the biologists are a small number of social scientists But there are radically divergent views as to how the field should be delimited and sociobiology is one of the most widely discussed fields in biology and anthropology today The symposium on which this book is based was arranged by a biologist and an anthropologist The participants leaders in their fields ably

Violence as Seen Through a Prism of Color Letha A See, 2018-12-20 So many parts of society target citizens of color for violence what can be done *Violence as Seen Through a Prism of Color* examines violence from a structural perspective including violence in prisons schools and colleges churches homes and within political corporate structures This unique hard hitting book argues that individual violence stems from the structure of our society and its institutions Most of the contributors are African American educators and practitioners who have a thorough understanding of structural violence Some have experienced political violence others have expert knowledge of structural violence within the criminal justice system educational institutions and elsewhere even in churches and homes Their writings are undeniably unflinchingly authentic it is impossible not to be moved and enraged by what they have to say The good news is that in addition to calling attention to the structural violence in our society they provide excellent insights on how the situation might be resolved *Violence as Seen Through a Prism of Color* shows that much of the violence within the criminal justice system stems from decisions made at the highest levels of government that minority offenders are much more frequently convicted and more harshly sentenced than their white counterparts how cultural racism contributes to the construction of motives for lynching hate crime and police violence against Americans of color such as Abner Louima Amadou Diallo and Rodney King how the judicial system encourages black on black violence by neglecting to halt criminal activities in non white neighborhoods how in the words of Mahatma Gandhi Poverty is the worst form of violence You ll also learn how corporations are amassing great wealth through privatizing prisons and conscripting the labor of non violent African American prisoners how racial profiling affects people of color how the media has exploited black men imprisoned for minor drug offenses how and why violence occurs in and against the black church Helpful charts and tables like one that names the corporations that use prison labor supplement the material you ll be surprised at what you learn Extensive references are included at the end of each chapter

Shaping Science with Rhetoric Leah Ceccarelli, 2010-11-15 How do scientists

persuade colleagues from diverse fields to cross the disciplinary divide risking their careers in new interdisciplinary research programs Why do some attempts to inspire such research win widespread acclaim and support while others do not In *Shaping Science with Rhetoric* Leah Ceccarelli addresses such questions through close readings of three scientific monographs in their historical contexts Theodosius Dobzhansky's *Genetics and the Origin of Species* 1937 which inspired the modern synthesis of evolutionary biology Erwin Schrödinger's *What Is Life* 1944 which catalyzed the field of molecular biology and Edward O Wilson's *Consilience* 1998 a so far not entirely successful attempt to unite the social and biological sciences She examines the rhetorical strategies used in each book and evaluates which worked best based on the reviews and scientific papers that followed in their wake Ceccarelli's work will be important for anyone interested in how interdisciplinary fields are formed from historians and rhetoricians of science to scientists themselves

Human By Nature Peter Weingart, Sandra D. Mitchell, Peter J. Richerson, Sabine Maasen, 2013-06-17 Representing a wide range of disciplines biology sociology anthropology economics human ethology psychology primatology history and philosophy of science the contributors to this book recently spent a complete academic year at the Center for Interdisciplinary Research ZiF discussing a plethora of new insights in reference to human cultural evolution These scholars acted as a living experiment of interdisciplinarity in vivo The assumption of this experiment was that the scholars while working and residing at the ZiF would be united intellectually as well as socially a connection that might eventually enhance

future interdisciplinary communication even after the research group had dispersed An important consensus emerged The issue of human culture poses a challenge to the division of the world into the realms of the natural and the cultural and hence to the disciplinary division of scientific labor The appropriate place for the study of human culture in this group's view is located between biology and the social sciences Explicitly avoiding biological and sociological reductionisms the group adopted a pluralistic perspective integrative pluralism that took into account both today's highly specialized and effective subdisciplinary research and the possibility of integrating the respective findings on a case by case basis Each sub group discovered its own way of interdisciplinary collaboration and submitted a contribution to the present volume reflecting one of several types of fruitful cooperation such as a fully integrated chapter a multidisciplinary overview or a discussion between different approaches A promising first step on the long road to an interdisciplinarily informed understanding of human culture this book will be of interest to social scientists and biologists alike

Human Being and Vulnerability Joseph Sverker, 2020-11-24 Joseph Sverker explores the division between social constructivism and a biologist essentialism by means of Christian theology For this Sverker uses a fascinating approach He lets critical theorist Judith Butler psycholinguist Steven Pinker and systematic theologian Colin Gunton interact While theology plays a central part to make the interaction possible the context is also that of the school and the effect of institutions on the pupil as a human being and learner In order to understand what underlies the division between nature and nurture or biology and the social in school Sverker develops new central concepts such as a kenotic personalism a weak ontology of relationality and a relational and performative reading of evolution He argues that most fundamental for what it is to be human is the person vulnerability bodiliness openness to the other and dependence Sverker concludes that the division between constructivism and essentialism discloses a deeper divide namely that between fundamentally vulnerable persons on the one hand and constructed independent individuals on the other

The Scientific Sublime Alan G. Gross, 2018 The sublime evokes our awe our terror and our wonder Applied first in ancient Greece to the heights of literary expression in the 18th century the sublime was extended to nature and to the sciences enterprises that viewed the natural world as a manifestation of God's goodness power and wisdom In *The Scientific Sublime* Alan Gross reveals the modern day sublime in popular science He shows how the great popular scientists of our time Richard Feynman Stephen Hawking Steven Weinberg Brian Greene Lisa Randall Rachel Carson Stephen Jay Gould Steven Pinker Richard Dawkins and E O Wilson evoke the sublime in response to fundamental questions How did the universe begin

How did life How did language These authors maintain a tradition initiated by Joseph Addison Edmund Burke Immanuel Kant and Adam Smith towering 18th century figures who adapted the literary sublime first to nature then to science though with one crucial difference religion has been replaced wholly by science In a final chapter Gross explores science s attack on religion an assault that attempts to sweep permanently under the rug two questions science cannot answer What is the meaning of life What is the meaning of the good life Darwin and International Relations Bradley A. Thayer,2021-03-17 Shows a mastery of research and theory in both biology and international relations and weaves the two fields together in a compelling fashion Dr Steven A Peterson Director School of Public Affairs Penn State Pathbreaking and controversial Darwin and International Relations offers the first comprehensive analysis of international affairs of state through the lens of evolutionary theory Using ethnological and statistical studies of warfare among tribal societies Bradley A Thayer argues that humans wage war for reasons predicted by evolutionary theory to gain and protect vital resources but also for the physically and emotionally stimulating effects of combat Thayer demonstrates that an evolutionary understanding of disease will become a more important part of the study of international relations as new strains of diseases emerge and advances in genetics make biological warfare a more effective weapon for states and terrorists He also explains the deep causes of ethnic conflict by illuminating how xenophobia and ethnocentrism evolved in humans He notes that these behaviors once contributed to our ancestors success in radically different environments but they remain a part of us Darwin and International Relations makes a major contribution to our understanding of human history and the future of international relations Obligatory reading for social and life scientists alike and deserves to become a standard work in political science International History Review A thoughtful book that can challenge some of our comfortable assumptions Journal of Military History Outstanding This book will become a standard work in political science Roger D Masters Dartmouth College

Development Betrayed Richard B Norgaard,2006-05-18 Modernity promised control over nature through science material abundance through technology and effective government through rational social organization Instead of leading to this promised land it has brought us to the brink of environmental and cultural disaster Why has there been this gap between modernity s aspirations and its achievements Development Betrayed offers a powerful answer to this question Development with its unshakeable commitment to the idea of progress is rooted in modernism and has been betrayed by each of its major tenets Attempts to control nature have led to the brink of environmental catastrophe Western technologies have proved inappropriate for the needs of the South and governments are unable to respond effectively to the crises that have resulted Offering a thorough and lively critiques of the ideas behind development Richard Norgaard also offers an alternative co evolutionary paradigm in which development is portrayed as a co evolution between cultural and ecological systems Rather than a future with all peoples merging to one best way of knowing and doing things he envisions a future of a patchwork quilt of cultures with real possibilities for harmony **Concepts and Theories of Human Development** Richard M.
