Declarative Agent Languages and Technologies Joao Leite, Andrea Omicini, Leon Sterling, Paolo Torroni, 2004-07-22 Agent metaphors and technologies are increasingly adopted to harness and govern the complexity of today's systems. As a consequence the growing complexity of agent systems calls for models and technologies that promote system predictability and enable feature discovery and verification. Formal methods and declarative technologies have recently attracted a growing interest as a means to address such issues. The aim of the DALT 2003 workshop was two fold. On the one hand we wanted to foster a discussion forum to export such techniques into the broader community of agent researchers and practitioners. On the other hand we wanted to bring in the issues of real world complex and possibly large scale agent system design in the perspective of formal methods and declarative technologies. Thanks to the very high quality of our program committee we managed to put together a rich program including three technical sessions and two panel sessions. The Use of Declarative Programming for Agent Oriented Software Engineering moderated by Leon Sterling and Andrea Omicini and Declarative and Logic Based Technology for Agent Reasoning and Interactions organized and moderated by Rafael Bordini and Wiebe van der Hoek with the participation of five invited panelists. This book contains the revised and extended versions of the papers presented at the workshop as well as three invited contributions by leading researchers of the field. It is composed of three parts: i) software engineering and multi agent system prototyping ii) agent reasoning BDI logics and extensions and iii) social aspects of multi agent systems **Encyclopedia of Multimedia**
