Dews, 2010-06-10 Affecting stories of faculty and graduate students from working class on their struggles in academia *The Social Construction of the US Academic Elite* Stephanie Beyer, 2021-09-05 This book explores the stark stratification and struggles over classifications in US academia from a relational perspective looking beyond material differences and tracing its roots to symbolic power relations Based on a mixed methods study drawing on both interview and quantitative data it offers an account of the workings of academia shedding light on the structures that permit elite departments to define categories and impose legitimate scientific definitions to which the non elite must adhere With a focus on two scientific disciplines the author shows how the translation of objective structures into mental structures establishes a relationship of power with regard to the definition of scientific categories thus determining access to resources and opportunities to participate and move within the academic field A study of the unequal intrusion of economic logics into the academic domain this volume will appeal to scholars policy makers and institutional leaders with interests in higher education inequality within science academic careers power relationships and competition in the academy **Experiences of Academics from a Working-Class Heritage**

Carole Binns, 2019-09-12 This book is a twist on the current discourse around inclusivity and widening participation Higher education is welcoming students from diverse educational social and economic backgrounds and yet it predominantly employs middle class academics Conceptually there appears on at least these grounds alone to be a cultural and class mismatch This work discusses empirical interviews with tenured academics from a working class heritage employed in one UK university Interviewees talk candidly about their childhood backgrounds their school experiences and what happened to them after leaving compulsory education They also reveal their experiences of university both as students and academics from their early careers to the present day This book will be of interest to an international audience that includes new and aspiring academics who come from a working class background themselves The multifaceted findings will also be relevant to established academics and students of sociology education studies and social class **The Intersections of a**

The Lives of Working Class Academics Iona Burnell Reilly, 2022-12-12 A collection of autoethnographies written by academics who self define as being from a working class heritage Each one is an account of their lives their experiences and their journeys into becoming a higher education professional in an industry still steeped in elitism

Values in Higher Education Teaching Tony Harland, Neil Pickering, 2010-10-18 Values in Higher Education Teaching explores the way in which teaching research learning and higher education are a values enterprise and that an exploration of values is necessary to work out the full purposes of a higher education to guide practices and help academics understand academic work Values inform thinking and actions and although this is well recognized values are seldom brought to the forefront of inquiries as practices in higher education are developed This book argues that by putting values firmly on the agenda of those who teach work and learn in higher education the academic profession can open up new spaces for value conversations and potentially transform the way in which they practice Values in Higher Education Teaching is key reading for university lecturers those with responsibility for leadership and management of higher education and postgraduates studying for higher degrees in higher education There are few books that directly address the broad and complex question of values in teaching in higher education yet at the same time values are widely recognised as permeating all our practices In this sense an accepted part of academic life remains in the realm of taken for granted rather than being consciously and explicitly explored and practiced The book deals with the idea of values in both a philosophical and practical manner It is based on original research and uses both empirical data and theory to address teaching values in higher education and the current values of the higher education system It explores what academics have valued historically in teaching and also addresses the major reforms of the last 20 years Reforms have essentially changed the nature of western higher education but have made little real difference to the outcomes for student learning and society whereas teaching with values in all subjects has the potential to radically alter student experiences
