The Strategic Bombing of Germany, 1940-1945 Alan Levine, 1992-07-22 This book is the only full scale account of the strategic air offensive against Germany published in the last twenty years and is the only one that treats the British and the Americans with parity Much of what Levine writes about British operations will be unfamiliar to American readers He has stressed the importance of winning air superiority and the role of escort fighters in strategic bombing and has given more attention to the German side than most writers on air warfare have Levine gets past a simple account of what we did to them and describes the target systems and German countermeasures in detail providing exact yet dramatic accounts of the great bomber operations the Ruhr dams Ploesti and Regensburg and Schweinfurt The book is broad guaged touching many matters from the development of bombing doctrine before the war to the technical development of the Luftwaffe and the RAF jets and V weapons to the role of the heavy bombers in supporting land and sea operations Levine stresses the impact of bombing on the war and generally endorses the strategic air campaign as worthwhile and effective But he concludes that many mistakes were made by the Allies both the British and the Americans in tactics the development of equipment and in the selection of targets Levine sees strategic bombing as a powerful tool that was often misused particularly when the doctrine of area bombing flourished Scholars students and buffs interested in World War II and or the history of aviation will find this study of great interest

The Evolution of the US Air Force Israel Guy, 2024-08-05 This book looks at the history of the US Air Force through the lens of its lack of preparedness for major wars which is shown to be a result of its organizational culture The U S Air Force is probably the most powerful military force in history both in its

destructive firepower and in its ability to project it globally Yet despite its unparalleled power the Air Force entered its first three pivotal conflicts World War II the Korean War and the Vietnam War unprepared But surprisingly it was remarkably well prepared for its fourth major war the Gulf War of 1991 Could there be an underlying trait or characteristic which influenced the Air Force between the wars that historically caused the US Air Force to be unprepared for war or prepared for the wrong type of war Surprisingly there is such a factor which was quite prominent in the Air Force s complex identity its organizational culture Besides providing a historical description of the Air Force this book demonstrates clearly how its organizational culture evolved and how it caused the US Air Force to be prepared for the wrong war It also shows that when the organizational culture changed the Air Force changed its focus and arrived prepared for the following war the 1991 Gulf War This book will be of interest to students of air power strategic studies US public policy and security studies in general

Case Studies in Strategic Bombardment R. Cargill Hall,2020-10-09 This volume the third in a series of historical case studies of important air power missions addresses the most controversial and arguably most significant air power mission of all strategic bombardment The ability of aircraft and missiles to destroy or disrupt an enemy s war making potential and to break or weaken his will to resist independent of the actions of ground and naval forces has served as the central theme of air power theory and as the rallying point of air advocates who made it the raison d tre for independent air forces Written by well known military historians each chapter stands alone as a case study of an important stage in strategic air operations combined the chapters provide a comprehensive and insightful analysis of the theory and practice of strategic bombardment from its inception in World War I through the Gulf War of 1991 From Boom Trenchard and Billy Mitchell to John Warden and Charles Horner the vision of air power prophets and airmen is tested against the reality of bureaucratic inertia aircraft capability technological advances and bombing accuracy Seldom in the twentieth century has technology fully met the demands of air power theory Technology of course is the prime determinant of doctrine and operations This exceptional volume surveys the entire history of strategic bombardment and its technology from the Zeppelin and Gotha of the Great War to the F 117 and the penetrating precision guided bomb of the Gulf War The reader will find technological advances such as radar bombing and range extending air to air refueling that answer one problem only to produce new requirements and expectations that demand more advanced technology Guided munitions while offering remarkable precision have underscored the problems of strategic intelligence collection and dissemination and of locating and attacking both fixed and mobile targets **Wiley Handbook of Science and Technology for Homeland Security, 4 Volume Set** John G.

How the War Was Won Phillips Payson O'Brien,2019-01-31 World War II is usually seen as a titanic land battle decided by mass armies most importantly those on the Eastern Front Phillips Payson O'Brien shows us the war in a completely different light In this compelling new history of the Allied path to victory he argues that in terms of production technology and economic power the war was far more a contest of air and sea than of land supremacy He shows how the Allies developed a predominance of air and sea power which put unbearable pressure on Germany and Japan's entire war fighting machine from Europe and the Mediterranean to the Pacific Air and sea power dramatically expanded the area of battle and allowed the Allies to destroy over half of the Axis equipment before it had even reached the traditional battlefield Battles such as El Alamein Stalingrad and Kursk did not win World War II air and sea power did American Airpower Strategy in World War II Conrad C. Crane,2016-04-05 Resistance is a product of will times means Carl von Clausewitz postulated in his treatise On War In his 1993 Bombs Cities and Civilians which the American Historical Review judged must reading for anyone interested in the subject of air warfare Conrad C Crane focused on the moral dimension of American air strategy in World War II specifically the Allied effort to break the enemy's will through targeting civilians With decades of research and reflection and a wealth of new material at his command Crane returns to the subject of America's WWII airpower strategy to offer an analysis fully engaged with the means side of Clausewitz's equation the design and impact of strategic bombing of the enemy's infrastructure and thus its capacity to fight A marked advance in our understanding of the use of airpower in war in general and the Second World War in particular Crane's work shows how despite an undeniable lack of concern about civilian casualties in Germany and Japan late in the war American strategic bombing in WWII consistently focused on destroying the enemy's war making capacity instead of its collapsing will Further Crane persuasively argues that in the limited wars since then separating such targets has become increasingly more difficult and all air campaigns against states have subsequently escalated to accept greater risks for civilians American Airpower Strategy in World War II also provides an expanded close look at the use of airpower in the last three months of the strategic air war against Germany when so many bombing missions relied upon radar aids as well as the first direct comparison of 8th and 15th Air Force bombing campaigns in Europe The

result is the most coherent and concise analysis of the application and legacy of Allied strategic airpower in WWII and a work that will inform all future practical and theoretical consideration of the use and the role of airpower in war **World War II in Europe, Africa, and the Americas, with General Sources** Loyd Lee, 1997-08-21 A broadly interdisciplinary work this handbook discusses the best and most enduring literature related to the major topics and themes of World War II Military historiography is treated in essays on the major theaters of military operations and the related themes of logistics and intelligence while political and diplomatic history is covered in chapters on international relations resistance movements and collaboration The volume analyzes themes of domestic history in essays on economic mobilization the home fronts and women in the military and civilian life The book also covers the Holocaust This handbook approaches each topic from a global viewpoint rather than focusing on individual national communities Except for nonprint material the literature research and sources surveyed are primarily those available in English The volume is aimed at both experts on the war and the general academic community and will also be useful to students and serious laymen interested in the war
