Positive Mind Therapy Rakesh K. Mittal, 2006-01-01 The common concept of humanity revolves round the personality of an individual and that too is often narrowed down to the physical person which is objective and perceivable as an essential tool for social behaviour But what lies under this exterior is a whole mass of emotions responses and reactions which activate the physical personality or else the external form is nothing but a mass of dead and inert matter These two layers of the human personality are clearly discernible even to an outsider But there is a subtler undercurrent of ideas thoughts and impressions which serve as a causative layer to the internal personality and from which the emotions responses and reactions arise In this book the author has compiled his feelings and experiences at the causative layer depicting how every event of life is a step towards evolution

Mind And Reality: The Space-time Window Wolfram Schommers, 2014-09-22 The relationship between mind and reality is usually perceived as an event that takes place in reality and producing simultaneously an internal image in the mind So it takes place twice so to speak and there is a one to one correspondence between the two events Within this conception matter is embedded in space and time and can be designated as container principle This monograph emphasizes that the well known philosopher Immanuel Kant denied this principle and he stated that reality is principally not recognizable to a human being and modern biological evolution seems to lead exactly to Kant's point of view Within the theory of evolution man's image about reality in mind does not have to be complete and true in the sense of a precise reproduction and it is relatively easy to recognize that even space and time should not be elements of reality outside Within this conception only a certain part of reality which the human being needs for mastering life is projected onto space and time and we come to the so called projection principle Then spacetime defines the window to reality leading to a number of exciting and essential questions some of which are discussed in this monograph As is known current physics is mainly based on the container principle But this monograph proposes that the projection principle is obviously more suitable and could help to solve open ended questions as for example in connection with the nature of time the particle wave duality the cosmological constant etc Regarding the statistical behavior of matter Einstein's statement God does not play dice has to be seen in a new light but also Feynman's general viewpoint on quantum theory that

it cannot be understood by man However conventional quantum theory is obviously not a consistent framework as per the projection principle The term world equation is critically probed in this monograph **Novelistic Inquiries into the Mind** Grzegorz Maziarczyk, Joanna Klara Teske, 2016-09-23 Novelistic Inquiries into the Mind traces the multiple relations between the mind and the contemporary novel The contributors here examine various types of narrative fiction ranging from the postmodern novels of J M Coetzee and Ian McEwan through the experimental prose of Leslie Scalapino to the popular fiction of James Dashner and Christopher Moore On the one hand they investigate novelistic representations of various mind related issues including different states of consciousness Alzheimer s disease thought experiments and formation of the self On the other by analysing and evaluating in these contexts such narrative devices as unreliable narration development of conceptual networks or multimodal integration of verbal and non verbal semiotic resources they exemplify the multiplicity of techniques whereby the novel can explore the intricacies of mental processes Taken together the essays collected here demonstrate the potential of the novel as genre for representing the mind In its exploration of the problems involved in the linguistic construction of reality the cognitive function of art and the uncertain status of consciousness the contemporary novel thus reflects the mind s urge to understand itself as well as possible meanings of its own perceptions creations and projections
