Communications Technology is an attempt to provide a foundation for theory development on information technology in organizations by delegating the task to a set of competent researchers and theorists. Given the dearth of theory development in the field, such a strategy makes some sense. Because of its diversity, organizations, communications, and management information systems scholars should all find something of interest. *Administrative Science Quarterly*: How do technology and organization interact to shape organizational structures and processes? What organizational, political, and social processes constrain technological development? What forces shape the articulation of organizational and technological systems? Answering these and other pivotal questions, this powerful volume centers on the role of theory for advancing our knowledge of communication technology in organizations at several levels: micro, group, and macro. A distinguished team of contributors examines a richly diverse group of topics, including telecommunications, communication networks, and new media; the use of group decision support systems and discretionary databases; to name but a few. *Organizations and Communication Technology* offers nothing less than a fresh foundation for research and management practice. As such, it is essential reading for scholars, practitioners, and students in the fields of management studies, communication science, organization studies, and policy studies.

Fourth International Handbook of Globalisation, Education and Policy Research Joseph Zajda, 2024-12-04. This handbook provides a global synthesis of ongoing research in education and policy change during the last decade. It examines discourses of globalisation from the perspectives of the global North and global South. Major theories of globalisation and education policy reforms employed in the handbook are classified into two broad categories: structuralist and post-structuralist. The handbook, while examining the impact of global trends in different societies, cultures, and educational settings, attempts to synthesise different meta-theories of globalisation and their impact on societies and educational systems. It discusses the continued interaction of global, national, and local forces and influences, especially the importance of standards and quality-driven education reforms, the need to overcome inequality of access to quality schools, and aims at providing quality education for all students. In addition, the impact of neo-liberal ideology on education is examined in terms of its impact on ongoing standards-driven education reforms globally. The handbook analyses neo-liberalism in education and its focus on increasing global competitiveness, accountability, efficiency, quality standards, driven policy reforms, and educational stratification. The impact of globalisation on education policy and reforms is a strategically significant issue for us all. The unifying conceptual framework used in the handbook to critique the strategic significance of globalisation is grounded in discourse CDA and critical theory. The work offers the latest findings concerning major issues in education and policy directions such as global social and economic inequality, neo-liberal standard-driven education and policy reforms, performing schools in the performing culture, education for human rights and social justice, new perspectives on education for sustainability, dominant and effective models of values education in schools, and the ubiquitous impact of ICTs on education systems.

better understand how information systems can be effectively deployed in today's digital world. This book contributes to our understanding of a number of theories and models. The theoretical contribution of this book is that it analyzes and synthesizes the relevant literature in order to enhance knowledge of IS theories and models from various perspectives. The first section of Volume 1 presents detailed descriptions of a set of theories centered around the IS lifecycle including the Success Model, Technology Acceptance Model, User Resistance Theories, and four others. The second section of Volume 1 contains strategic and economic theories including a Resource Based View, Theory of Slack Resources, Portfolio Theory, Discrepancy Theory, Models, and eleven others.
