Social Support: Theory, Research and Applications I.G. Sarason, 2013-11-11 No one is rich enough

to do without a neighbor Traditional Danish Proverb This bit of Danish folk wisdom expresses an idea underlying much of the current thinking about social support While the clinical literature has for a long time recognized the deleterious effects of unwholesome social relationships only more recently has the focus broadened to include the positive side of social interaction those interpersonal ties that are desired rewarding and protective This book contains theoretical and research contributions by a group of scholars who are charting this side of the social spectrum Evidence is increasing that maladaptive ways of thinking and behaving occur disproportionately among people with few social supports Rather than sapping self reliance strong ties with others particularly family members seem to encourage it Reliance on others and self reliance are not only compatible but complementary to one another While the mechanism by which an intimate relationship is protective has yet to be worked out the following factors seem to be involved intimacy social integration through shared concerns reassurance of worth the opportunity to be nurtured by others a sense of reliable alliance and guidance The major advance that is taking place in the literature on social support is that reliance is being placed less on anecdotal and clinical evidence and more on empirical inquiry The chapters of this book reflect this important development and identify the frontiers that are currently being explored

Wright,2019-12-16 Social Support and Health in the Digital Age discusses how the information age has revolutionized nearly every facet of human communication from the ways in which people purchase products to how they meet and fall in love These exciting new communication technologies can both unite and divide us People who are separated by great distances can now communicate with each other in real time

whereas parents often find themselves competing with smartphones and tablets for their children's attention. This book explores the many ways that digital communication media such as online forums, social networking sites, and mobile applications enhance and constrain social support in health-related contexts.
