Gordon,2025-02-24 This is a college algebra level textbook written to provide the kind of mathematical knowledge and experiences that students will need for courses in other fields such as biology chemistry business finance economics and other areas that are heavily dependent on data either from laboratory experiments or from other studies The focus is on the fundamental mathematical concepts and the realistic problem solving via mathematical modeling rather than the development of algebraic skills that might be needed in calculus Functions Data and Models presents college algebra in a way that differs from almost all college algebra books available today Rather than going over material covered in high school courses the Gordons teach something new Students are given an introduction to data analysis and mathematical modeling presented at a level that students with limited algebraic skills can understand The book contains a rich set of exercises many of which use real data Also included are thought experiments or what if questions that are meant to stretch the student s mathematical thinking **Our Social World** Jeanne H. Ballantine,Keith A. Roberts,2011-10-26 In this brief text two leaders of the Teaching Sociology movement encourage students development of their sociological imaginations through role taking Assuming the role of a child living in poverty in India or of a member of an African tribe students learn to re envision their global society An innovative integrated framework provides core sociological concepts while features such as Contributing to Our Social World enable students to do public sociology Our Social World Condensed Version presents the perspective of

students living in the larger global world *Sport, Exercise and Social Theory* Gyoza Molnar,John Kelly,2013-05-07 Why are sport and exercise important What can the study of sport and exercise tell us about wider society Who holds the power in

creating contemporary sport and exercise discourses It is impossible to properly understand the role that sport and exercise play in contemporary society without knowing a little social theory It is social theory that provides the vocabulary for our study of society that helps us ask the right critical questions and that encourages us to look for the real story behind sport and exercise Sport Exercise and Social Theory is a concise and engaging introduction to the key theories that underpin the study of sport exercise and society including feminism post modernism Neo Marxism and the sociological imagination Using vivid examples and descriptions of sport related events and exercise practices the book explains why social theories are important as well as how to use them giving students the tools to navigate with confidence through any course in the sociology of sport and exercise This book shows how theory can be used to debunk many of our traditional assumptions about sport and exercise and how they can be a useful window through which to observe wider society Designed to be used by students who have never studied sociology before and including a whole chapter on the practical application of social theory to their own study it provides training in critical thinking and helps students to develop intellectual skills which will serve them throughout their professional and personal lives

Ethics and Corporate Responsibility Patricia H. Werhane, R. Edward Freeman, Sergiy Dmytriyev, 2017-11-16 While there is a large and ever expanding body of work on the fields of business ethics and corporate social responsibility CSR there is a noted absence of a single source on the methodology and research approaches to these fields In this book the first of its kind leading scholars in the fields gather to analyse a range of philosophical and empirical approaches to research in business ethics and CSR It covers such sections as historical approaches normative and behavioural methodologies quantitative qualitative and experimental perspectives grounded theory and case methodologies and finally a section on the role of the researcher in research projects This book is a valuable and essential read for all researchers in business ethics and CSR not only for those starting out in the fields but also for seasoned scholars and academics **Methods for Social Theory** Jan Ch. Karlsson, Ann Bergman, 2016-12-15 This book constitutes a practical guide to the important skills of both theorizing and writing in social scientific scholarship focusing on the importance of identifying relations between concepts that are useful for explaining social entities and of producing a text that convincingly advances the theory that has been constructed Taking as its point of departure the distinction between the research process and the reporting process between clarifying one's ideas to oneself and writing to express these ideas clearly to others this volume concentrates on writing when theorizing as a

way of thinking emphasizing the series of relations that exist between ontology epistemology and rhetoric upon which successful theoretical writing depends Richly illustrated with practical examples the book is divided into two parts the first of which presents techniques for theorizing based upon visualized and logical connections of ideas concepts and empirical patterns in both free and systematic ways and the second part providing techniques for structuring and presenting arguments in essays papers articles or books As such *Methods for Social Theory* offers a toolbox for the development and presentation of social thought which will prove essential for students and teachers across the social sciences *Arts and Humanities in Progress* Dario Martinelli, 2016-10-13 The book aims to introduce a research concept called Numanities as one possible attempt to overcome the current scientific social and institutional crisis of the humanities Such crisis involves their impact on and role within society their popularity among students and scholars and their identity as producers and promoters of knowledge The modern western world and its economic policies have been identified as the strongest cause of such a crisis Creating the conditions for but in fact encouraging it However a self critical assessment of the situation is called for Our primary fault as humanists was that of stubbornly thinking that the world s changes could never really affect us as we felt our identity was sacred In the light of these approaches the main strengths of humanities have been identified in the ability to promote critical thinking and analytical reasoning provide knowledge and understanding of democracy and social justice develop leadership cultural and ethical values The main problems of humanities are the lack economic relevance the socio institutional perception of them as impractical and unemployable the fact that they do not match with technological development Finally the resulting crisis consists mainly in the absence or radical reduction of funding from institutions a decrease in student numbers a decrease in interest a loss of centrality in society A Numanities New Humanities project should consider all these aspects with self critical assessment on the first line The goal is to unify the various fields approaches and also potentials of the humanities in the context dynamics and problems of current societies and in an attempt to overcome the above described crisis Numanities are introduced not as a theoretical paradigm but in terms of an umbrella concept that has no specific scientific content in it that particularly means that the many existing new fields and research trends that are addressing the same problems post humanism transhumanism transformational humanities etc are not competitors of Numanities but rather possible ways to them Therefore more than a theoretical program Numanities intend to pursue a mission and that is summarized in a seven point manifesto In the light of these premises and reflections the book then proceeds to identify the areas of inquiry that Numanities in their functions and comprehensive approach seek to cover The following list should also be understood as a statement of purposes for this entire book series These in other words will be the topics areas we intend to represent Once elaborated on the foundations of Numanities the book features a second part that presents two case studies based on two relatively recent and now updated investigations that the author has performed in the fields of musical and animal studies respectively The two cases and relative areas of inquiry were selected because

they were considered particularly relevant within the discussion of Humanities and in two different ways In the first case study the author discussed the most typical result or perhaps cause of the technophobic attitude that was addressed in the first part of the book the issue of authenticity as applied in the author's particular study to popular music In the second case study he analyzes two different forms of comparative analysis between human and non human cognition like in the former case this study too is aimed at a critical commentary on what the author considers redundant biases in current humanistic research anthropocentrism and speciesism
