physics From the minds of the world s leading physicists there flowed a river of ideas that would transport mankind to the pinnacle of wonderment and to the very depths of human despair This was a century that began with the certainties of absolute knowledge and ended with the knowledge of absolute uncertainty It was a century in which physicists developed weapons with the capacity to destroy our reality whilst at the same time denying us the possibility that we can ever properly comprehend it Almost everything we think we know about the nature of our world comes from one theory of physics This theory was discovered and refined in the first thirty years of the twentieth century and went on to become quite simply the most successful theory of physics ever devised Its concepts underpin much of the twenty first century technology that we have learned to take for granted But its success has come at a price for it has at the same time completely undermined our ability to make sense of the world at the level of its most fundamental constituents Rejecting the fundamental elements of uncertainty and chance implied by quantum theory Albert Einstein once famously declared that God does not play dice Niels Bohr claimed that anybody who is not shocked by the theory has not understood it The charismatic American physicist Richard Feynman went further he claimed that nobody understands it This is quantum theory and this book tells its story Jim Baggott presents a celebration of this wonderful yet wholly disconcerting theory with a history told in forty episodes significant moments of truth or turning points in the theory s development From its birth in the porcelain furnaces used to study black body radiation in 1900 to the promise of stimulating new quantum phenomena to be revealed by CERN s Large Hadron Collider over a hundred years later this is the extraordinary story of the quantum world Oxford Landmark Science books are must read classics of modern science writing which have crystallized big ideas and shaped the way we think

Thirty years that shook physics : the story of quantum theory George Gamow, 1985 *Half-Hours with Great Scientists* Charles G. Fraser, 1948-12-15 The present age is sometimes called the Scientific Age This does not imply that every member of the community is an expert scientist far from it It does mean however that the labours of the scientists have given the age certain features which influence the life of every citizen to some degree Accordingly it is desirable that as many as possible should have some understanding of the scientists work of their aims their point of view and their methods If we had a wishing rug or some sort of spare time car that could transport us at will to any place and time we might visit the scientists of every age see them at work listen to their discussions and even take a hand in the proceedings The wishing rug is not available but the literature of science will serve the purpose for anyone who will do the necessary searching reading and thinking Unfortunately some of that literature is decidedly inaccessible To meet the difficulty this book has been written in the hope of bringing some of the most important passages of the literature of science within the reach of everyone Every part of the vast edifice of science is necessarily the work of some human being and most of us become more interested in the building and are able to understand and appreciate it better when we know who were the architects and builders and when how and why they did their work The story of science is a noble epic of the struggle of man from ignorance toward knowledge and wisdom and toward the mastery of nature and of himself One purpose of science is to systematize experience and a knowledge of the story of science has helped many in that process of organization This book therefore offers the reader a cordial invitation to embark on a tour of visits with great scientists to learn from them the parts they played in the advancement of science and of the human race Here is a treasure house of fascinating information for all who are interested in the world around us and the history of man's understanding of it
