

Rockets

Rockets are vehicles that use fuel to create a powerful force, called thrust, which propels them into space.

The first rockets were used in China over 800 years ago, for fireworks displays and military purposes.

Rockets can be used for many purposes, such as launching satellites into space, exploring other planets, and delivering supplies to the International Space Station.

The most powerful rocket in history is the Saturn V, which was used during the Apollo missions to send astronauts to the moon.

Rockets have different stages, each with their own engines and fuel. As each stage runs out of fuel, it separates from the rocket and falls back to Earth.

Rockets can be very loud! The sound of a rocket launch can be heard for miles around, and the vibrations from the launch can even cause buildings to shake.

The first test rocket failed to clear and stay on course during flight.
