

USER DEFINED FUNCTIONS IN VBA

User Defined Functions are written by us. We can pass parameters to a function. A Function can also return values as its result.

SYNTAX

The syntax to define a function is as follows.

Function <function_name> (<param1> as <data_type1>.....) As

<Function_return_data_Type>

- We use the Function and End Function keywords to depict the beginning and end of the function.
- We need to specify the function name. It cannot contain blank spaces.
- We need to pass information to function in the form of parameters. Please specify the name of the parameter along with its data type in the brackets. It is not mandatory to pass parameters while defining a function.

EXAMPLE

Let us say we want a function to find the simple interest. Use the following VBA code.

```
Function Two_Sum(a As Integer, b As Integer) as Integer  
Two_Sum=a + b  
End Function
```

We can use this function in our workbook.

	A	B
1	Formula	=Two_Sum(10,20)
2	Result	30
