

Diseases of Muscular System

Sprains

Ankle ligament ruptures are typically the result of a sudden motion of the foot. Future discomfort and swelling could be avoided with the use of rehabilitation treatments.

Strain

A pulled bicep is the result of overstretching and tearing the tendons and/or muscle fibres in the biceps. Pain and edema are possible complications.

Bruise

A bruise is the medical word for a cut or rupture in the muscular tissue. Symptoms include swelling and a rise in pressure around the muscle that has been injured.

Cancer Of The Muscle

This disorder, which can impair the calf muscle, is extremely uncommon. Cancer of the calf muscles is called sarcoma in the medical community.

A Balanced Omega-6/Omega-3 Fatty Acid Ratio, Cholesterol and Coronary Heart Disease A. P. Simopoulos,F. De Meester,2009-08-12 For more than half a century the
 relationship between dietary factors and coronary heart disease CHD has been a major focus of health research Contrary to
 the established view current data suggest that dietary cholesterol is not a primary factor of or causes heart disease with the
 possible exception of the genetic forms of familial hypercholesterolemias For instance recent clinical trials evaluating the
 effect of cholesterol lowering drugs on the development of chronic heart failure diabetes and stroke have yielded
 disappointing results On the other hand an unbalanced omega 6 omega 3 fatty acid ratio and a cholesterol intake not
 consistent with the amount during evolution seem to be causal factors in the development of CHD A panel of international
 experts in genetics nutrition fatty acid cholesterol metabolism and coronary heart disease has contributed to this publication
 summarizing and critically discussing for the first time the importance of evolutionary aspects of diet the omega 6 omega 3
 fatty acid ratio and cholesterol intake relative to health and CHD They also propose measuring blood fatty acids in the
 population in order to define the risk of CHD and other chronic diseases This book will be of interest to physicians

cardiologists gerontologists and pediatricians nutritionists dieticians health care providers scientists in industry and government and policy makers

Polyamine Metabolism in Disease and Polyamine-Targeted Therapies Tracy Murray-Stewart,2019-10-01

Polyamines are ubiquitous polycations essential for all cellular life The most common polyamines in eukaryotes spermine spermidine and putrescine exist in millimolar intracellular concentrations that are tightly regulated through biosynthesis catabolism and transport Polyamines interact with and regulate negatively charged macromolecules including nucleic acids proteins and ion channels Accordingly alterations in polyamine metabolism affect cellular proliferation and survival through changes in gene expression and transcription translation autophagy oxidative stress and apoptosis Dysregulation of these multifaceted polyamine functions contribute to multiple disease processes thus their metabolism and function have been targeted for preventive or therapeutic intervention The correlation between elevated polyamine levels and cancer is well established and ornithine decarboxylase the rate limiting biosynthetic enzyme in the production of putrescine is a bona fide transcriptional target of the Myc oncogene Furthermore induced polyamine catabolism contributes to carcinogenesis that is associated with certain forms of chronic infection and or inflammation through the production of reactive oxygen species These and other characteristics specific to cancer cells have led to the development of polyamine based agents and inhibitors aimed at exploiting the polyamine metabolic pathway for chemotherapeutic and chemopreventive benefit In addition to cancer polyamines are involved in the pathologies of neurodegenerative diseases including Alzheimer s and Parkinson s parasitic and infectious diseases wound healing ischemia reperfusion injuries and certain age related conditions as polyamines are known to decrease with age As in cancer polyamine based therapies for these conditions are an area of active investigation With recent advances in immunotherapy interest has increased regarding polyamine associated modulation of immune responses as well as potential immunoregulation of polyamine metabolism the results of which could have relevance to multiple disease processes The goal of this Special Issue of Medical Sciences is to present the most recent advances in

polyamine research as it relates to health disease and or therapy
