Implementing Global Networked Systems Management Raj Ananthanpillai,1997 The work that is described in this book was driven by necessity to meet a real need for managing globally distributed complex networks And it s that pragmatic approach to achieving results managing real world complex networks from end to end that is sometimes missing from the current formal standards bodies vendors providing disparate projects services It is extremely important for the end users to move away from vertical thinking focus expand on systems thinking a move that will address not only vertical network management needs but also horizontal business management needs **ABCs of z/OS System Programming: Volume 4** Paul Rogers,IBM Redbooks,2011-02-10 This IBM Redbooks publication describes the functions of z OS Communications Server z OS Communications Server provides a set of communications protocols that support peer to peer connectivity functions for both local and wide area networks including the most popular wide area network the Internet z OS

Communications Server also provides performance enhancements that can benefit a variety of TCP/IP applications. z/OS Communications Server provides both SNA and TCP/IP networking protocols for z/OS. The SNA protocols are provided by VTAM and include Subarea Advanced Peer-to-Peer Networking and High Performance Routing protocols. z/OS Communications Server exploits z/OS UNIX services even for traditional MVS/TSO environments and applications. Prior to utilizing TCP/IP services, therefore, a full-function mode z/OS UNIX environment including a Data Facility Storage Management Subsystem (DFSMS) and a security product such as Resource Access Control Facility (RACF) must be defined and active before z/OS Communications Server can be started successfully.

The ABCs of z/OS System Programming is a 13-volume collection that provides an introduction to the z/OS operating system and the hardware architecture. Whether you are a beginner or an experienced system programmer, the ABCs collection provides the information that you need to start your research into z/OS and related subjects. If you want to become more familiar with z/OS in your current environment or if you are evaluating platforms to consolidate your e-business applications, the ABCs collection will serve as a powerful technical tool. The contents of the volumes are as follows:

- Volume 1: Introduction to z/OS and storage concepts, TSO/E, ISPF, JCL, SDSF, and z/OS delivery and installation.
- Volume 2: z/OS implementation and daily maintenance, defining subsystems, JES2 and JES3, LPA, LNK, LST, authorized libraries, SMP/E, Language Environment.
- Volume 3: Introduction to DFSMS, data set basics, storage management, hardware and software catalogs, and DFSMS.

Axel Buecker, Thomas Cosenza, Uma Kumaraguru, Christopher Meyer, Vinicius Oliveira, Vinodkumar Ramalingam, Jan Thielmann, Joe Welsh, IBM Redbooks, 2015-09-25. This IBM Redbooks publication documents the strength and value of the IBM security strategy with IBM z/Systems hardware and software referred to in this book by the previous product name IBM System z. In an age of increasing security consciousness and more dangerous and advanced persistent threats, System z provides the capabilities to address today's business security challenges. This book explores how System z hardware is designed to provide integrity, process isolation, and cryptographic capability to help address security requirements. We highlight the features of IBM z/OS and other operating systems that offer a variety of customizable security elements. We also

describe z OS and other operating systems and additional software that use the building blocks of System z hardware to meet business security needs We explore these from the perspective of an enterprise security architect and how a modern mainframe must fit into an enterprise security architecture This book is part of a three volume series that focuses on guiding principles for optimized mainframe security configuration within a holistic enterprise security architecture The intended audience includes enterprise security architects planners and managers who are interested in exploring how the security design and features of the System z platform the z OS operating system and associated software address current issues such as data encryption authentication authorization network security auditing ease of security administration and monitoring
