Zemková,Magni Mohr,Dario Novak ,Tomas Maly,2024-11-11 Good posture and strong core muscles are essential for most athletic movements but also for everyday activities Among them walking and running require lumbo pelvic stability and mobility for efficient movement and high level performance This is especially important during a large range of trunk motions when changing the direction of movement an abrupt walk to run transition or extreme uphill and downhill walking or running Such repetitive trunk loading over time can contribute to occurrence of back problems and lower limb injuries To avoid these unwanted effects a novel approach to studying the physiology of locomotion in relation to spine motion and balance function is required This can provide a basis for designing exercise programs specifically tailored for competitive athletes the healthy general population as well as those suffering from movement disorders So far much effort has been devoted to investigating the biomechanical and physiological variations of locomotion including walking running swimming or hopping However a surprising gap in the evidence is to what extent core strength contributes to effective locomotor performance and a healthy back Studying the neurophysiological mechanisms underlying the control of postural and core stability with special reference to locomotion is therefore of great importance

Comprehensive Evaluation of Various Training Protocols for Youth: Effects on Body Composition, Hemodynamics, and Motor Performance Jarosław Domaradzki,Cristian Alvarez,Natalia Danek,Dawid Koźlenia,2025-08-21 The prevalence of obesity high blood pressure insulin resistance and diabetes among youth and young adults is alarmingly high in many countries primarily driven by physical inactivity and unhealthy lifestyles Despite the efforts of current health institutions and

professionals effectively addressing these disorders remains a significant challenge Clinical and scientific research has demonstrated that specific exercise modalities such as high intensity interval training HIIT resistance training RT and concurrent training CT can significantly improve cardiometabolic health by providing cardiovascular metabolic and endocrine benefits through the stimulation of skeletal muscle mass and the cardiorespiratory system However the implementation of these interventions in children adolescents and young adults remains underexplored Additionally there is a gap in research focusing on the varying responsiveness to different exercise interventions especially among those who do not respond to exercise stimuli non responders Crucially understanding how early life interventions impact health outcomes into adulthood is essential for developing long term public health strategies Best Practice Approaches in Women's Sports

Association Football is undoubtedly a global sport with millions of individuals participating in more than 200 countries. The need for an educated football coaching workforce to deliver appropriate coaching practices has never been greater. Formal coach education, which is often the primary medium for developing football coaches, is socially constructed, meaning an array of social, cultural, and historical factors underpin the design and delivery of any provision. *Coach Education in Football: Contemporary Issues and Global Perspectives* is the first book to explicitly explore these aspects by providing critical insight into football coach education programmes from across the globe. Each chapter, organised via a central theme, highlights a contemporary issue affecting football coach education and development within a specific country, offering insights into the contextual opportunities and challenges. The book covers essential topics including the progression of female football coaches, coaches' perspectives towards current provision, technological and pedagogical advances, and the historical development of formal coach education. Each chapter demonstrates the complexities associated with developing football coaches within grassroots and high performance domains while providing recommendations for national governing bodies, policy makers, and coach developers. This book is the first of its kind to explicitly investigate football coach education globally. This accessible book is an important read for students, academics, and practitioners with an interest in sports coaching, coach education, and football. **Children's Exercise Physiology** Filipe Manuel Clemente, Luca Paolo Ardigo, Wook Song, Matthieu E.
