Harder, Frank Campbell, Rod McCormick, Kari Harder, Yvonne Bergmans, Rahel Eynan, 2013-10-15 Suicide remains one of the most pressing public health concerns across the world. This important reference work collects together a wide range of research around suicide and suicide prevention in order to guide future research and provide guidance for professionals about the best way to respond meaningfully to suicidal patients. Responding to the need for multi-disciplinary and international research to deepen our understanding of suicide, it demonstrates where our knowledge is firmly evidence-based and where new areas for research are emerging, as well as highlighting where we know little. Divided into six parts, each with its own editorial introduction and commentary, it explores research with and about survivors of suicide and indigenous populations. The remaining sections look at suicide-focused research in psychiatric nursing, psychiatry, psychology, and social work, and allied health. It is of interest to all advanced students, practitioners, and scholars interested in suicide and its impact and prevention.

**Categorization by Humans and Machines** , 1993-10-22 The objective of the series has always been to provide a forum in which leading contributors to an area can write about significant bodies of research in which they are involved The operating procedure has been to invite contributions from interesting active investigators and then allow them essentially free rein to present their perspectives on important research problems The result of such invitations over the past two decades has been collections of papers which consist of thoughtful integrations providing an overview of a particular scientific problem The series has an excellent tradition of high quality papers and is widely read by researchers in cognitive and experimental psychology      Contemporary Psychological Approaches to Depression Rick E. **International Handbook of Cognitive and Behavioural Treatments for Psychological Disorders** V.E. Caballo, 1998-11-27. This handbook shows the wide perspective cognitive behavioural treatment can offer to health professionals; the vast majority of whom now recognize that cognitive behavioural procedures are very useful in treating many mental disorders, even if certain disciplines continue to favour other kinds of treatment. This book offers a wide range of structured programmes for the treatment of various psychological/psychiatric disorders as classified by the DSM-IV. The layout will be familiar to the majority of health professionals in the description of mental disorders and their later treatment. It is divided into seven sections covering anxiety disorders, sexual disorders, dissociative, somatoform, impulse control disorders, emotional disorders, and psychotic and organic disorders. Throughout the twenty-three chapters, this book offers the health professional a structured guide with which to start tackling a whole series of mental disorders and offers pointers as to where to find more detailed information. The programmes outlined should, it is hoped, prove more effective than previous approaches with lower economic costs and time investment for the patient and therapist.
