Literature and Intellectual Disability in Early Modern England Alice Equestri, 2021-08-30 Fools and clowns were widely popular characters employed in early modern drama prose texts and poems mainly as laughter makers or also as ludicrous metaphorical embodiments of human failures Literature and Intellectual Disability in Early Modern England Folly Law and Medicine 1500 1640 pays full attention to the intellectual difference of fools rather than just their performativity what does their total partial or even pretended irrationality entail in terms of non standard psychology or behaviour and others perception of them Is it possible to offer a close contextualised examination of the meaning of folly in literature as a disability And how did real people having intellectual disabilities in the Renaissance period influence the representation and subjectivity of literary fools Alice Equestri answers these and other questions by investigating the wide range of significant connections between the characters and Renaissance legal and medical knowledge as presented in legal records dictionaries handbooks and texts of medicine natural philosophy and physiognomy Furthermore by bringing early modern folly in closer dialogue with the burgeoning fields of disability studies and disability theory this study considers multiple sides of the argument in the historical disability experience intellectual disability as a variation in the person and as a difference which

both society and the individual construct or respond to Early modern literary fools characterisation then emerges as stemming from either a realistic or also from a symbolical or rhetorical representation of intellectual disability

Disability & the Politics of Education Susan Lynn Gabel, Scot Danforth, 2008 Disability and the Politics of Education An International Reader is a rich resource that deals comprehensively with the many aspects of the complex topic of disability studies in education For nearly two decades global attention has been given to education as a human right through global initiatives such as Education for All EFA and the Salamanca Statement Yet according to UNESCO reaching the goals of EFA remains one of the most daunting challenges facing the global community Today millions of the world s disabled children cannot obtain a basic childhood education particularly in countries with limited resources Even in the wealthiest countries many disabled children and youth are educationally segregated from the nondisabled particularly if they are labeled with significant cognitive impairment International agencies such as the United Nations and the World Bank have generated funds for educational development but unfortunately these funds are administered with the assumption that west is best thereby urging developing countries to mimic educational policies in the United States and the United Kingdom in order to prove their aid worthiness This McDonaldization of education reproduces the labeling resource allocation and social dynamics long criticized in disability studies The authors in this volume explore these subjects and other complexities of disability and the politics of education In doing so they demonstrate the importance and usefulness of international perspectives and comparative approaches

Unimaginable Bodies Anna Catherine Hickey-Moody, 2009-01-01 Unimaginable Bodies radically resituates academic discussions of intellectual disability Through building relationships between philosophy cultural studies and communities of integrated dance theatre practice Anna Hickey Moody argues that dance theatre devised with and performed by young people with and without intellectual disability can reframe the ways in which bodies with intellectual disability are known This proposition is considered in terms of classic philosophical ideas of how we think the mind and body as Hickey Moody argues that dance theatre performed by young people with and without intellectual disability creates a context in which the intellectually disabled body is understood in terms other than those that pre suppose a Cartesian mind body dualism Taking up the writings of Spinoza and Deleuze and Guattari Hickey Moody critiques aspects of medical discourses of intellectual disability arguing that Cartesian methods for thinking about the body are recreated within these discourses Further she shows that Cartesian ways of conceiving

corporeality can be traced through select studies of the social construction of intellectual disability The argument for theorising corporeality and embodied knowledge that Hickey Moody constructs is a philosophical interpretation of the processes of knowledge production and subjectification that occur in integrated dance theatre Knowledge produced within integrated dance theatre is translated into thought in order to explore the affective nature of performance texts This book is essential reading for those interested in theories of embodiment disability studies and dance Cover Image Ziggy Kuster
