

# Понятия теории систем и системного анализа

## Основные принципы системного анализа:

- **Целостность** – рассмотрение системы одновременно как единое целое и как подсистему для вышестоящих уровней.
- **Иерархичность** строения – наличие множества компонентов, расположенных на основе подчинения компонентов низшего уровня компонентам высшего уровня.
- **Структуризация** – проведение анализа компонентов системы и их взаимосвязи в рамках конкретной организационной структуры. Как правило, процесс функционирования системы обусловлен не столько свойствами ее отдельных компонентов, сколько свойствами самой структуры (связями между компонентами).
- **Множественность** – использование множества математических, кибернетических и экономических моделей для описания отдельных компонентов и системы в целом.
