future advocates I might point out A crisis might create your most powerful opportunity for change The World's Health Care Crisis Ibis Sanchez Serrano, 2011-07-06 At present human society is facing a health care crisis that is affecting patients worldwide In the United States it is generally believed that the major problem is lack of affordable access to health care i e health insurance This book takes an unprecedented approach to address this issue by proposing that the major problem is not lack of affordable access to health care per se but lack of access to better safer and more affordable medicines The latter problem is present not only in the United States and the developing world but also in countries with socialized health care systems such as Europe and the rest of the industrialized world This book provides a comparative analysis of the health care systems throughout the world and also examines the biotechnology and pharmaceutical industries Examines the health care structure of the United States Europe and the third world both separately and comparatively Offers primary source insight through in depth interviews with pharmaceutical and health care industry leaders from around the world Carefully explains in clear terms the intricacies of the health care and pharmaceutical system and how these intricacies have led to the current crisis Offers concrete comprehensive solutions to the health care crisis *The healthcare crisis in southeastern Pennsylvania* United States. Gender, Law, and Religion During the COVID-19 Health Crisis Montserrat Gas-Aixendri, Adelaide Madera, 2025-09-02 Looking at COVID 19 infection through a gendered lens reveals its deep impact on individuals in vulnerable positions especially women It raised new concerns about gender equity and inclusion particularly when gender intersects with other identity markers such as religious affiliation This intersection creates a double vulnerability heightening the risk of discrimination violence hate speech and harassment against women In various legal contexts women bear multiple roles and responsibilities The interaction between gender law religion and the pandemic has often resulted in disempowerment in shaping female identity This is evident both in Western countries where migrant women struggle for full integration and in their countries of origin where they often face the consequences of normative pluralism and insufficient state legal responses The pandemic has generated not only a health crisis but also exacerbated social and economic issues including increased gender based violence in family settings and growing inequalities in access to fundamental rights such as healthcare education employment and justice In this complex framework religious leaders face new challenges and must provide effective responses Female leadership within religious contexts can play a crucial role in advocating for new paradigms that address evolving social cultural and legal needs Religious actors are thus called upon to offer both guidance and support to vulnerable and marginalized members of their communities and to collaborate with governments in shaping a future where religious freedom gender equality gender justice and freedom from discrimination are upheld This volume aims

to investigate the pandemic's impact on women within faith communities examine emerging balances between female religious cultural claims and public welfare imperatives and develop gendered intersectional perspectives that promote women's full integration equality and participation in civil society **The Global Health Crisis** Thana Cristina de Campos, 2017-03-30 Proposing a new view of global justice based on natural law this book presents a discussion of the key ethical values in contemporary medicine and health notably in relation to neglected diseases like malaria Ebola and Zika The lack of treatments for such diseases points to a global health crisis Thana Cristina de Campos provides a general framework based on global commutative justice for discussion of the ethical responsibilities of international stakeholders mapping the varying duties they have and their content and force She also addresses the urgent need for reforms to the international legal rules on bioethics notably the system of intellectual property rights These ideas will be of interest to those who are looking for a more nuanced view of the human right to health than that provided by advocates in the globalist mainstream

Emergencies and Public Health Crisis Management- Current Perspectives on Risks and Multiagency Collaboration Amir Khorram-Manesh, Frederick M Burkle, 2020-12-11 The successful management of emergencies and public health crises depends on adequate measures being implemented at all levels of the emergency chain of action from policy makers to the general population It starts with appropriate risk assessment prevention and mitigation and continues to prehospital and hospital care recovery and evaluation All levels of action require well thought out emergency management plans and routines based on established command and control identified safety issues functional communication well documented triage and treatment policies and available logistics All these characteristics are capabilities that should be developed and trained particularly when diverse agencies are involved In addition to institutional responses a robust community based disaster response system can effectively mitigate and respond to all emergencies A well balanced response is largely dependent on local resources and regional responding agencies that all too often train and operate within silos with an absence of interagency cooperation The importance of this book issue is its commitment to all parts of emergency and public health crisis management from a multiagency perspective It aims to discuss lessons learned and emerging risks introduce new ideas about flexible surge capacity and show the way it can practice multiagency collaboration Health Care Crisis in America, 1971 United States. WHO guidance on research methods for health emergency and disaster risk management, 2021-09-30 Health Emergency and Disaster Risk Management Health EDRM has recently emerged as a critical field for research policy and practice as a result of the growing recognition of health as a core dimension in disaster risk management Global frameworks such as the WHO 13th General Programme of Work GPW13 the Sendai Framework for Disaster Risk Reduction 2015 2030 the Sustainable Development Goals SDGs and the International Health Regulations IHR have goals targets and indicators that monitor the health impact of disasters and emergencies and resilience in health systems and communities Policies and actions guided by the best possible evidence are therefore critical for managing the health risks of emergencies and disasters However the evidence base in Health EDRM is very limited reflecting the overall lack of research in this area To address this gap the WHO set out to develop a reference book about methods to guide Health EDRM research in collaboration with global experts This book provides concrete guidance across a wide range of research taking a systematic approach to discuss the type of research that is needed to generate relevant evidence for managing risks and consequences of emergencies and disasters This research includes observational and experimental studies and those that use qualitative or quantitative data or both When using the book readers are encouraged to take account of the specific setting of the health risks of any emergency or disaster including national capacities and the impacts that are directly and indirectly health related
