Shafer, Linda Shafer, 2002 Annotation Drawing on best practices identified at the Software Quality Institute and embodied in bodies of knowledge from the Project Management Institute the American Society of Quality IEEE and the Software Engineering Institute Quality Software Project Management teaches 34 critical skills that allow any manager to minimize costs risks and time to market Written by leading practitioners Robert T Futrell Donald F Shafer and Linda I Shafer it addresses the entire project lifecycle covering process project and people It contains extensive practical resources including downloadable checklists templates and forms **Object-oriented GUI Application Development** Geoff Lee, 1993 An excellent training guide for project managers user interface designers and software engineers this book provides step by step instructions guidelines and examples of the life cycle development methodology that can be applied to multiple graphical environments **Blackboard Architectures and Applications** V. Jagannathan, 1989-01-01 Blackboard Architectures and Applications focuses on studies done on blackboard architecture in the industries and academe Particularly given value is the role this paradigm plays in distributed problem solving parallelism and intelligent real time systems Composed of 21 chapters the book contains the literature of authors who have diligently conducted studies on this concern The book starts by discussing the blackboard model of problem solving including control and organization wherein goal relationships and their use in blackboard architecture are noted Also given attention are BBI basic control loop an empirical comparison of explicit and implicit control architectures and the dynamic integration of reasoning methods The book then proceeds with discussions on the concurrency and parallelism of advanced architectures Taken into consideration include design alternatives for parallel and distributed blackboard systems the parallelization of blackboard architectures and the Agora system and a comparison of the cage system and polygon architecture Real time blackboard architecture systems are also explored This part contains experiments frameworks and methods designed to approximate processing in real time problem solving The text also points at developments in blackboard systems Given attention are the architecture of ATOME performance of GBB the Erasmus system and the use of blackboard system for distributed problem solving The book finally focuses on object oriented blackboard architecture for model based diagnostic reasoning dynamic instructional planning in the BB1 architecture and consideration of blackboard model for cockpit information management The book is a vital source of data for those wanting to explore the potential of artificial intelligence *Instructional Design: International Perspectives II* Sanne Dijkstra, Franz Schott, Norbert Seel, Robert D. Tennyson, Norbert M. Seel, 2014-03-18 Instructional design theory and practice has evolved over the past 30 years from an initial narrow focus on programmed instruction to a multidimensional field of study integrating psychology technology evaluation measurement and management The growth of instructional design ID has occurred because of direct needs problems and goals from society Its application in planning

instruction first developed in the United States with the Department of Defense during World War II with the purpose of meeting immediate concerns for effective training of larger numbers of military personnel From the beginning ID has rapidly expanded into applications in industrial and executive training vocational training classroom learning and professional education Although ID has its roots in the U S applications and theoretical growth is an international activity However literature at the international level is still limited to either individual author contributions or collections primarily represented by single countries As a result there is no standard reference source that contains the rich variety of theories and applications to form the international foundation for the field The goal of this two volume set is to establish international foundations for ID theory research and practice within the framework of the two following objectives to identify and define the theoretical research and model foundations for ID and to bridge the gap between ID foundations and application Volume I includes chapters on philosophical and theoretical issues on learning theory and ID models Volume II provides an overview of the state of the art of solving ID problems The contributors offer contrasting points of view which provide a rare opportunity to see the diversity and complexity in the field The editorial committee has selected a wide range of internationally known authors to make presentations in the topic areas of the field
