Science in the British Colonies of America Raymond Phineas Stearns, 1970 John Banister was America's first resident naturalist the first university trained specialist to

send specimens drawings and descriptive Latin catalogues of plants insects spiders and molluscs to leading naturalists in England The Ewans here present a collection of Banister s works and document his place in the growth of knowledge of the natural history of the Atlantic seaboard They shows that had his works been published even as incomplete as they were at his death they would have fundamentally altered the course of American botany entomology and malacology In addition Banister would have been rightly credited by anthropologists with much of the Virginia Indian lore attributed to Robert Beverley Banister s catalogues are faithfully transcribed His charm and talents stand out clearly as well as his respect for provident Nature who does nothing in vaine Because of Banister s accidental death at forty two and the unfinished state of his writings drawings and collections few of his many discoveries carry his name Yet the Ewans reveal that his plant descriptions and drawings played a critical part in botanical systematics having a significant influence on Linnaeus binomials Publisher
