Handbook of Detergents - 6 Volume Set Uri Zoller,2008-11-23 With contributions from experts and pioneers this set provides readers with the tools they need to answer the need for sustainable development faced by the industry The six volumes constitute a shift from the traditional mostly theoretical focus of most resources to the practical application of advances in research and development With con The Scientific Basis of Flotation K.J. Ives,2012-12-06 K J Ives Professor of Public Health Engineering University College London Industrial application of the use of bubbles to float fine particles in water began before the beginning of this century in the field of mineral processing Such bubble flotation was applied very little outside mineral processing until about 1960 when the dissolved air process which has already had some success in the pulp and paper industry was applied to water and wastewater treatment The subsequent two decades saw not only a growth development for water and wastewater treatment but also a growing cognisance of the similarities that existed with mineral processing flotation Therefore the time seemed ripe in 1982 for a joint meeting between experts in these two major fields of flotation to put together the Scientific Basis of Flotation in the form of a NATO Advanced Study Institute Attended by about 60 specialists mainly post doctoral from 17 countries this Study Institute in residence for two weeks in Christ s College Cambridge UK heard presentations from several international experts principally the 8 co authors of this book The integration of the various scientific disciplines of physics physical chemistry colloid science hydrodynamics and process engineering showed where the common basiS and occasional important differences of flotation could be applied to mineral processing water and wastewater treatment and indeed some other process industries for example pharmaceuticals and food manufacture Biology and Chemistry of Eukaryotic Cell Surfaces E.Y.C. Lee,2012-12-02 Biology and Chemistry of Eucaryotic Cell Surfaces contains the proceedings of the Miami Winter Symposia held on January 14 15 1974 and organized by the Department of Biochemistry University of Miami School of Medicine in Miami Florida Organized into 27 chapters separating the manuscripts presented at the symposium this book presents the stochastic studies on cell surface stickiness and the adhesion and aggregation of blood platelets This text also explains the cell contact and transformation induced changes in the dynamic organization of normal and neoplastic cell plasma membranes and their role in lectin mediated toxicity toward tumor cells It also looks into the chemical components of surface membranes related to biological properties carbohydrate antigens of cell surfaces and molecular orientation of erythrocyte membrane glycoproteins Some other chapters discuss the cell envelope glycoprotein biosynthesis in fungi cellular lectin receptors and topographical alterations of the fat cell surface membrane elicited by concanavalin A Immunochemical evidence for putrescine sites on the membrane of mammalian cells as well as the fractionation and biosynthesis of membrane components in erythroid cells are also described Progress in Surface and Membrane Science J. Surface and Membrane Science Volume 6 covers the developments in the study of surface and membrane science. The book discusses the progress in surface and membrane science, the solid state chemistry of the silver halide surface and the experimental and theoretical aspects of the double layer at the mercury solution interface. The text also describes contact angle hysteresis, ion binding and ion transport produced by neutral lipid soluble molecules and the biophysical interactions of blood proteins with polymeric and artificial surfaces. Physical chemists, biophysicists and physiologists will find the book invaluable.

Methods of Protein Separation Nicholas Catsimpoolas, 2013-06-29. This open end treatise on methods concerning protein separation had its beginning in an American Chemical Society symposium entitled 'Con temporary Protein Separation Methods' which was held in Atlantic City, New Jersey in September 1974. The purpose of the symposium and subsequently of the present work was to review the available modern techniques and underlying principles for achieving one of the very important tasks of experimental biology, namely the separation and characterization of proteins present in complex biological mixtures. Physicochemical characterization was covered only as related to the parent method of fractionation and therefore involved mostly mass transport processes. Additionally the presentation of methods for gaining insight into complex interacting protein profiles was considered of paramount importance in the interpretation of separation patterns. Finally specific categories of proteins, e.g. chemically modified, deriving from a specific tissue, conjugated to different moieties etc. require meticulous trial and selection and/or modification of existing methodology to carry out the desired separation. In such cases the gained experience provides valuable guidelines for further experimentation. Although powerful techniques exist today for the separation and related physicochemical characterization of proteins, many biological fractionation problems require further innovations. It is hoped that the description in the present treatise of some of the available separation tools and their limitations will provide the necessary integrated background for new developments in this area.

Nicholas Catsimpoolas, Cambridge, Massachusetts.

Bioadhesive Drug Delivery Systems Vincent M. Lenaerts, Robert Gurny, 2024-12-06. This comprehensively written text covers in depth all aspects of bioadhesive systems. Bioadhesive systems are presently playing a major role in the field because of their ability to maintain a dosage form at a precise body site for a prolonged period of time over which the active principle is progressively released. Included in this book are descriptions of the different mucosae in healthy and pathological situations, a theoretical approach of polymers/mucin interactions and a comparative description of the methods used to evaluate bioadhesion. Up to date reviews of pharmaceutical applications are also given, subdivided according to the route of administration and type of system. It also contains a chapter devoted to the fundamentals of bioadhesion. This reference is an indispensable guide for researchers in the pharmaceutical field as well as academic researchers.

Immunochemistry of Proteins M. Zouhair Atassi, 2012-12-06. The structural features responsible for the immunogenicity of certain parts of native protein molecules have been of interest to immunochemists and protein chemists.

for over three decades Following the early work of Land steiner in 1942 which showed that peptide fragments from silk fibroin exhibited an inhibitory activity toward the reaction of the protein with its antibodies fragments from many other protein systems have been isolated and studied However no concerted effort was or could be devoted to the elucidation of the complete antigenic structure of a protein In order for these endeavors to be successful and meaningful knowledge of both the amino acid sequence and the detailed three dimensional structure of the protein is necessary Such information was not available for a protein until early in the 1960s This and the fact that protein chemistry was not in fact sufficiently developed early in the 1960s to enable the successful completion of the entire antigenic structure of a protein were major contributing factors for the slow progress in this field Determination of the antigenic structures of proteins therefore posed a chemical challenge of enormous proportions For these reasons many investigators diverted their attention to study of the immunochemistry of homo or mixed amino acid polymers in the hope that the information derived from these systems might prove useful in the understanding of the immunochemistry of proteins Encyclopedic Handbook of Biomaterials and Bioengineering: v. 1-2. Materials Donald Lee Wise,1995 Integrating basic science engineering and medical applications this handbook provides a treatment of materials used in or on the human body ranging from biopolymers for controlled release drug delivery systems to metal plates used in bone repair and absorbable devices such as sutures
