The Action Plan for Australian Birds 2020 Stephen T. Garnett, G Barry Baker, 2021-12-01 The Action Plan for Australian Birds 2020 is the most comprehensive review of the status of Australia's avifauna ever attempted The latest in a series of action plans for Australian birds that have been produced every decade since 1992 it is also the largest The accounts in this plan have been authored by more than 300 of the most knowledgeable bird experts in the country and feature far more detail than any of the earlier plans This volume also includes accounts of over 60 taxa that are no longer considered threatened mainly thanks to sustained conservation action over many decades This extensive book covers key themes that have emerged in the last decade including the increasing impact of climate change as a threatening process most obviously in Queensland's tropical rainforests where many birds are being pushed up the mountains However the effects are also indirect as happened in the catastrophic fires of 2019-20 Many of the newly listed birds are subspecies confined to Kangaroo Island where fire destroyed over half the population But there are good news stories too especially on islands where there have been spectacular successes with predator control Such uplifting results demonstrate that when action plans are followed by action on the ground threatened species can indeed be recovered and threats alleviated

Restoring North America's Birds Robert A. Askins, 2008-10-01 The decline of bird species in a wide range of North American habitats forests prairies shrublands mountain regions marshes and deserts has inspired two decades of intense scientific study of bird ecology and conservation But for professional scientists and amateur birders alike interpreting the results of these diverse studies is often complex and bewildering This accessible

book pulls together recent research on bird species and habitats to show how basic ecological principles apply in seemingly different situations Robert A Askins provides an engaging introduction to bird ecology and concepts of landscape ecology focusing on such intriguing species as Bachman s Warbler Red Crossbill Mountain Plover and Marbled Murrelet Understanding the ancient landscapes of North America and how humans have changed them Askins says is essential for devising plans to protect and restore bird populations In addition to such obvious changes to the landscape as the clearing of forests and plowing of prairies more subtle changes also dramatically affect birds Species may disappear when we interrupt natural disturbances by suppressing wildfires or trapping out beaver or when we disrupt habitat with roads and housing developments Askins challenges some of the assumptions that underlie current conservation efforts and offers concrete recommendations based on sound ecological principles for protecting the rich natural diversity of North America s birds div
