## **The Honey Bubble:**

*The Honey Bubble* George Putnam, 2002-11-19 The Honey Bubble takes us down into the forgotten decomposing inner city Los Angeles neighborhoods most of us pass over on elevated freeways and into the threadbare desperate lives of the denizens there Three owners of borderline skid row gin mills hatch a dingbat scheme to bolster their revenues by what else murdering the competition The Competition is the only decent guy around it seems the honest owner operator of the only watering hole in the area where you'd even trust the ice The three co conspirators no master criminals to begin with set off a series of Rube Goldberg missteps and quickly begin to be devoured by their own scheme When the intended victims bodyguard gets wind of the plot the whole landscape darkens and the second half of the novel becomes an accelerating cinematic slide into a truly demonic and violent denouement and a life or death climax you will never see coming This book is at once very funny genuinely frightening elegantly crafted and boasts one of the most truly frightening villains I have even encountered in print or film Rodney Deming screenwriter Proceedings New Jersey Beekeepers Association, 1927

**Human and Machine Consciousness** David Gamez, 2018-03-07 Consciousness is widely perceived as one of the most fundamental interesting and difficult problems of our time However we still know next to nothing about the relationship between consciousness and the brain and we can only speculate about the consciousness of animals and machines Human and Machine Consciousness presents a new foundation for the scientific study of consciousness It sets out a bold interpretation of consciousness that neutralizes the philosophical problems and explains how we can make scientific predictions about the consciousness of animals brain damaged patients and machines Gamez interprets the scientific study of consciousness as a search for mathematical theories that map between measurements of consciousness and measurements of the physical world We can use artificial intelligence to discover these theories and they could make accurate predictions about the consciousness of humans animals and artificial systems Human and Machine Consciousness also provides original insights into unusual conscious experiences such as hallucinations religious experiences and out of body states and demonstrates how designer states of consciousness could be created in the future Gamez explains difficult concepts in a clear way that closely engages with scientific research His punchy concise prose is packed with vivid examples making it suitable for the educated general reader as well as philosophers and scientists Problems are brought to life in colourful illustrations and a helpful summary is given at the end of each chapter The endnotes provide detailed discussions of individual points and full references to the scientific and philosophical literature **Prince Ubbely Bubble's New Story Book ... Rethinking Innateness Jeffrey L. Elman, 1996 Rethinking Innateness asks the question What does it really mean to say that a behavior is innate The authors describe a new framework in which interactions occurring at all levels give rise to emergent forms and behaviors These outcomes often may

be highly constrained and universal yet are not themselves directly contained in the genes in any domain specific way One of the key contributions of Rethinking Innateness is a taxonomy of ways in which a behavior can be innate These include constraints at the level of representation architecture and timing typically behaviors arise through the interaction of constraints at several of these levels The ideas are explored through dynamic models inspired by a new kind of developmental connectionism a marriage of connectionist models and developmental neurobiology forming a new theoretical framework for the study of behavioral development While relying heavily on the conceptual and computational tools provided by connectionism Rethinking Innateness also identifies ways in which these tools need to be enriched by closer attention to biology
