The Cell Surface: Its Molecular Role in Morphogenesis A. S. G. Curtis, 1967 *A Symposium on Calcium and Cellular Function* A.W. Cuthbert, 1970-06-18 *Biology and Chemistry of Eukaryotic Cell Surfaces* E.Y.C. Lee, 2012-12-02

Biology and Chemistry of Eukaryotic Cell Surfaces contains the proceedings of the Miami Winter Symposia held on January 14 15 1974 and organized by the Department of Biochemistry University of Miami School of Medicine in Miami Florida Organized into 27 chapters separating the manuscripts presented at the symposium this book presents the stochastic studies on cell surface stickiness and the adhesion and aggregation of blood platelets This text also explains the cell contact and transformation induced changes in the dynamic organization of normal and neoplastic cell plasma membranes and their role in lectin mediated toxicity toward tumor cells It also looks into the chemical components of surface membranes related to biological properties carbohydrate antigens of cell surfaces and molecular orientation of erythrocyte membrane glycoproteins Some other chapters discuss the cell envelope glycoprotein biosynthesis in fungi cellular lectin receptors and topographical alterations of the fat cell surface membrane elicited by concanavalin A Immunochemical evidence for putrescine sites on the membrane of mammalian cells as well as the fractionation and biosynthesis of membrane components in erythroid cells are also described *Dynamic Aspects of Cell Surface Organization* George Poste, Garth L. Nicolson, 2013-10-22

Cell Surface Reviews Volume 3 *Dynamic Aspects of Cell Surface Organization* reviews the progress in the study of the dynamic nature of membrane organization The book is comprised of 14 chapters that discuss the various areas of concerns relating to membrane dynamics The coverage of the text includes techniques and methods employed in the analysis and manipulation of the various aspects of cell membranes such as freeze fracture techniques manipulation of the lipid composition of cultured animal cells and somatic genetic analysis The book also talks about some of the traits and behaviors of membrane dynamics including shedding of tumor cell surface antigens dynamics of antibody binding and complement interactions at the cell surface and structure and function of surface immunoglobulin of lymphocytes The text will be of great use to microbiologists biochemists and other researchers whose work requires a good understanding of the various aspects of cells *Cellular Biology of Ectoenzymes* Georg W. Kreutzberg, Martin Reddington, Herbert Zimmermann, 2012-12-06

Cells do not normally live as single entities but are grouped together in specific functional and structural configurations in various tissues Intra cellular mechanisms maintain cellular viability and provide the means necessary for their specific cellular functions The interaction between cells is maintained by mechanisms involving extracellular signalling Such extracellular mechanisms may include special properties of the cell surface which involve immediate cell contact but may also represent mechanisms which act at a distance and are mediated via special secretions and or receptors Recent studies on cell cell contact have tended to stress cell surface components directly mediating cellular interactions the extracellular medium as a metabolically active compartment has been rather neglected However it

represents a vital medium through which cells communicate being important in for example chemotaxis in primitive organisms and in development and in the coordination of multiple functions in multicellular organisms. It is not surprising therefore that a number of molecular mechanisms have developed together with increasing biological complexity during evolution. Two aspects of the extracellular space have received increasing attention in the last few years. First several macromolecules such as collagen, laminin and fibronectin have been identified as components of an extracellular matrix giving a structural dimension to the extracellular compartment.

Principles of Cell Adhesion (1995) Peter D. Richardson, Manfred Steiner, 2017-11-22. Intended for cell biologists, biophysicists, biochemists, molecular biologists, physiologists, researchers in hemostasis and thrombosis and pathologists, this book provides an insight into cell adhesion from three interdisciplinary perspectives: fundamental facts of adhesion, molecular biochemistry of adhesion and physiological aspects. It summarizes the basic aspects of surfaces in general and describes the theoretical and experimental tools necessary to investigate cell adhesion, including the basic biochemistry and molecular biology of adhesion. The book offers concise treatment of individual topics, features current material and provides key references as a guide to further study.

Physical Chemistry of Biological Interfaces Adam Baszkin, Willem Norde, 1999-11-22. An introduction to the most important fundamental concepts of physicochemical interface science and a description of experimental techniques and applications of surface science in relation to biological systems. It explores artificial assemblies of lipids, proteins and polysaccharides that perform novel functions that living systems cannot duplicate.

Biochemistry and Metabolism Anthony J. Sbarra, 2013-11-11. This comprehensive treatise on the reticuloendothelial system is a project jointly shared by individual members of the Reticuloendothelial Society and biomedical scientists in general who are interested in the intricate system of cells and molecular moieties derived from these cells which constitute the RES. It may now be more fashionable in some quarters to consider these cells as part of what is called the mononuclear phagocytic system or the lymphoreticular system. Nevertheless, because of historical developments and current interest in the subject by investigators from many diverse areas, it seems advantageous to present in one comprehensive treatise current information and knowledge on the RES such as morphology, biochemistry, phylogeny, basic aspects and ontogeny, physiology and pharmacology as well as clinical areas including immunopathology, cancer, infectious diseases, allergy and hypersensitivity. It is anticipated that by presenting information concerning these apparently heterogeneous topics under the unifying umbrella of the RES, attention will be focused on the similarities as well as interactions among the cell types constituting the RES from the viewpoint of various disciplines. The treatise editors and their editorial board, consisting predominantly of the editors of individual volumes, are extremely grateful for the enthusiastic cooperation and enormous task undertaken by members of the biomedical community in general and especially by members of the American as well as European and Japanese Reticuloendothelial Societies.

Ultrastructure, Macromolecules, and Evolution Lawrence S. Dillon, 2013-11-11. Thus far in the history of biology two

and only two fundamental principles have come to light that pervade and unify the entire science the cell theory and the concept of evolution While it is true that recently opened fields of investigation have given rise to several generalizations of wide impact such as the universality of DNA and the energetic dynamics of ecology closer inspection reveals them to be part and parcel of either of the first two mentioned Because in the final analysis energy can act upon an organism solely at the cellular level its effects may be perceived basically to represent one facet of cell metabolism Similarly because the DNA theory centers upon the means by which cells build proteins and reproduce themselves it too proves to be only one more even though an exciting aspect of the cell theory In fact if the matter is given closer scrutiny evolution itself can be viewed as being a fundamental portion of the cell concept for its effects arise only as a consequence of changes in the cell's genetic apparatus accumulating over geological time Or if one wishes the diametrically opposite standpoint may be taken For if current concepts of the origin of life hold any validity the evolution of precellular organisms from the primordial biochemicals must have proceeded over many eons of time prior to the advent of even the most primitive cell

Surface Chemistry of Biological Systems M. Blank, 2012-12-06 This volume of *Advances in Experimental Medicine and Biology* is based on an American Chemical Society Symposium entitled *Surface Chemistry of Biological Systems* which took place in New York on September 11-12, 1969 Thanks to the special photo offset process used by the publishers the papers are appearing very soon after their presentation and at a lower cost than usual These advantages are appreciated by the scientific community As the title of the volume indicates we have attempted to bring the scientific approach and techniques of surface chemistry to the complex problems of biological systems Two previous symposia in this field have been published one in the *Journal of Colloid and Interface Science* 24:1-127, 1967 and the other in the *Journal of General Physiology* 52:187S-252S, 1968 The previous publication outlets a chemical and a biological journal help to emphasize the interdisciplinary nature of the material and also the appropriateness of the choice of *Advances in Experimental Medicine and Biology* for the current symposium
