The Challenge Of Abundance:

The Challenge of Abundance Robert Theobald, 1961 Synthesis of ideas about international problems **Bulletin of the Atomic Scientists**, 1960-11 The Bulletin of the Atomic Scientists is the premier public resource on scientific and technological developments that impact global security Founded by Manhattan Project Scientists the Bulletin's iconic Doomsday Clock stimulates solutions for a safer world *The Challenge of Highly Pathogenic Microorganisms* Avigdor Shafferman, Baruch Velan, Arie Ordentlich, 2010-06-07 The OHOLO conferences are sponsored by the Israel Institute for Biological Research and take their name from the site of the first meeting on the shores of Lake Kinnereth The purpose of these meetings is as it was at their inception over 50 years ago to foster interdisciplinary communication between scientists in Israel and to provide added stimulus by the participation of invited scientists from abroad The core of the organizers of the OHOLO conferences are scientists from the Israel Institute for Biological Research From time to time a particular OHOLO conference cooperates with an international scientific organization The present 46th OHOLO Conference marks the resumption of the OHOLO tradition after 8 years of interruption caused by events beyond our control It is my belief that our uncompromising commitment to excellence in research and development in the various areas of science in Israel is essential to our survival in this troubled region The OHOLO conference tradition is a reflection of this conviction The present 46th OHOLO Conference entitled *The Challenge of Highly Pathogenic Microorganisms Mechanisms of Virulence and Novel Medical Countermeasures* intends to address the unique virulence features and host-pathogen interactions of microorganisms constituting emerging biothreat with emphasis on *Y. pestis*, *B. anthracis*, *F. tularensis* and Orthopox viruses Accordingly we selected classical microbiological as well as genomic proteomic transcriptomic approaches towards developments of novel prophylactic and post exposure treatment as well as updated strategies of diagnostics and bioforensics **Hearings** United States. Congress. House, 1948 *Marine Ecosystem Assessment for the Southern Ocean: Meeting the Challenge for Conserving Earth Ecosystems in the Long Term* Monica M. C. Muelbert, 2024-12-24 National and international agencies need assessments of change in ecosystems and their drivers in order to sustain natural systems to maintain the delivery of services and to meet the challenge for conserving Earth ecosystems in the long term In marine systems change may arise directly from human activities e.g. fisheries indirectly from local or global activities cascading effects through food webs from fisheries or changing environments from climate change and/or ocean acidification or from naturally varying processes A particular challenge for managers is to identify how dangerous future climate change will be for ecosystems and their services and whether mitigation or adaptation may be needed in advance in order to achieve the conservation requirements For regions of international attention particularly those that have the attention of many management or policy oriented bodies a standardized process is needed to harmonize the scientific information on the status and trends in ecosystems used by the different bodies That process also needs to ensure the information is available in a timely manner For example

assessments of change in habitats species and or food webs in the Southern Ocean are currently compiled separately for at least ten different international organizations or processes A Marine Ecosystem Assessment for the Southern Ocean MEASO aims to harmonize that information for policy makers This assessment began with an international conference in April 2018 <http://www.measo2018.aq> where it was agreed to undertake the first MEASO over 2018-2019 with the view to provide the outcomes to relevant bodies such as the Scientific Committee for the Conservation of Antarctic Marine Living Resources soon after

The Challenge of Jesus' Parables Richard N. Longenecker, 2000 A fresh look at the meaning of Jesus parables for Christian living today The parables recorded in the Gospels are central for an understanding of Jesus and his ministry Yet the parables are more than simple stories they present a number of obstacles to contemporary readers hoping to fully grasp their meaning In this volume thirteen New Testament scholars provide the background necessary to understand the original context and meaning of Jesus parables as well as their modern applications all in a manner easily accessible to general readers Contributors Stephen C Barton Craig A Evans Richard T France Donald A Hagner Morna D Hooker Sylvia C Keesmaat Michael P Knowles Walter L Liefeld Richard N Longenecker Allan W Martens Klyne R Snodgrass Robert H Stein Stephen I Wright *Meeting the Challenge*, 2007 During September 19-20, 2006 a conference was held at the University of Washington Botanic Gardens Seattle WA with the title S2 Meeting the challenge invasive plants in Pacific Northwest Ecosystems S3 The mission of the conference was to create strategies and partnerships to understand and manage invasions of non native plants in the Pacific Northwest The audience included over 180 professionals students and citizens from public and private organizations responsible for monitoring studying or managing non native invasive plants This proceedings includes twenty seven papers based on oral presentations at the conference plus a synthesis paper that summarizes workshop themes discussions and related information Topics include early detection and rapid response control techniques biology and impacts management approaches distribution and mapping of invasive plants and partnerships education and outreach

The Challenge of Protein Crops as a Sustainable Source of Food and Feed for the Future Antonio M. De Ron, Francesca Sparvoli, José J. Pueyo, Didier Bazile, 2017-05-03 Grain legumes together with quinoa and amaranth pseudocereals and other crops are attractive candidates to satisfy the growing demand for plant protein production worldwide for food and feed Despite their high value many protein crops have not been adequately assessed and numerous species are underutilized Special attention has to be paid to genetic diversity and landraces and to the key limiting factors affecting yield including

water deficiency and other abiotic and biotic stresses in order to obtain stable reliable and sustainable crop production through the introduction and local adaptation of genetically improved varieties Legumes the main protein crops worldwide contribute to the sustainable improvement of the environment due to their ability to fix nitrogen and their beneficial effects on the soil They play a key role in the crop diversification and sustainable intensification of agriculture particularly in light of new and urgent challenges such as climate change and food security In addition the role of legumes in nutrition has been recognized as a relevant source of plant protein together with other benefits for health Chapters dealing with common bean lupine soybean lentil cowpea and Medicago are included in this book Most contributions deal with legumes but the significant number of papers on different aspects of quinoa gives an idea of the increasing importance of this protein crop Pseudocereals such as quinoa and amaranth are good sources of proteins Quinoa and amaranth seeds contain lysine an essential amino acid that is limited in other grains Nutritional evaluations of quinoa indicate that it constitutes a source of complete protein with a good balance among all of the amino acids needed for human diet and also important minerals vitamins high quality oils and flavonoids Other protein crops also included in this book are hemp cotton and cereals maize wheat and rice Although cereals protein content is not high their seeds are largely used for human consumption In this book are included articles dealing with all different aspects of protein crops including nutritional value breeding genetic diversity biotic and abiotic stress cropping systems or omics which may be considered crucial to help provide the plant proteins of the future Overall the participation of 169 authors in 29 chapters in this book indicates an active scientific community in the field which appears to be an encouraging reflect of the global awareness of the need for sustainability and the promising future of proteins crops as a source of food and feed
