Jean Piaget

The Child's Conception Of:

The Child's Conception of the World Jean Piaget, 2007 Nineteenth century developmental psychologist Jean Piaget examines the child's notions of reality and causality at various stages of development *Child's Conception of Space* Jean Piaget, 2013-08-21 First published in 1997 This Volume 4 of Jean Piaget's selected works and explores the study of the concept of space or rather of the innumerable ideas involved in the concept of space which Piaget sees is for many reasons an indispensable part of child psychology **The Child's Conception of the World** Jean Piaget, Joan Tomlinson, 1929

The Child's Conception of Space Jean Piaget, 1948 *The Child's Conception of the World* Jean Piaget, 1971 **The Child's Conception of Space** Jean Piaget, Bärbel Inhelder, 1956 **The Child's Conception of Number** Jean Piaget, 1952 Professor Piaget discusses a set of investigations he and a team of co-workers carried out on the genesis of the notion of number in the child's mind By asking questions freely they were able to gather valuable statements from children about the actions they were asked to perform with experimental objects Beginning with the hypothesis that the construction of number goes hand in hand with the development of logic the research team set out to diagnose developing number relevant capabilities more basic than those involved in counting and routine primary school number work The aim was to study the essential properties of the number system and the underlying assumptions which adults make about the behavior of numbers The first experiments dealt with the child's ability to grasp the ideas of conservation of quantity and conservation of number These led to investigations on the ability to coordinate corresponding sets and a study of the cardinal and ordinal aspects of numbers and their interrelationships The final experiments dealt with the child's growing awareness of basic additive and multiplicative properties of numbers Piaget sees classes relations and numbers as cognitive domains which develop in an intertwined mutually dependent way From these experiments he concludes that number is organized stage after stage in close connection with the gradual elaboration of systems of inclusions hierarchy of logical classes and systems of asymmetrical relations qualitative seriations the sequence of numbers thus resulting from an operational synthesis of classification and seriation *The Child's Conception of Time* Jean Piaget, 1969 Translation of *Le développement de la notion de temps chez l'enfant* **The Child's Conception of the World (Classic Reprint)** Jean Piaget, 2017-05-18 Excerpt from *The Child's Conception of the World* Hence it is not merely useful but essential first to examine the methods to be employed in studying these beliefs To judge of the logic of children it is often enough simply to talk with them or to observe them among themselves To arrive at their beliefs requires a special method which it must be confessed outright is not only difficult and tedious but demands also an outlook the fruit of at least one or two full years training Mental specialists trained in clinical practice will immediately appreciate the reason In order to assess a child's statement at its true worth the most minute precautions are necessary Some account of these precautions must now be given since if the reader ignores them he is likely to falsify completely the meaning of the pages which follow and moreover to mismanage the experiments should he

as we hope decide to check them by repeating them himself About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works Child's Conception Of Geometry Jean Piaget,Barbel Inhelder,Alina Szeminska,2013-07-04 This is Volume XIX of thirty two in a series on Developmental Psychology Originally published in 1960 There are certain problems of a general nature in regard to the development of spatial concepts in young children the problem of spatial intuition as a whole is exceedingly complex and this study discusses of a child s conception of geometry of measurement and metrical geometry

Unveiling the Magic of Words: A Report on "**The Child S Conception Of**"
