Fausch, 2013-04-17 This volume is a collection of papers assembled to honor Hiroya Kawanabe an eminent Japanese ecologist who studied fishes and other organisms Kawanabe retired from his position as Professor at Kyoto University in March 1996 In the first section of the volume his career is highlighted by a biography describing his life and work a bibliography of his more than 750 lifetime publications and a personal interview with a colleague who has been close to his work throughout his career Papers in the second section of the volume include invited reviews of research on fish ecology in Japan a historical overview of freshwater fishes of Japan and recent studies on sex change among reef fishes The 24 papers in the third section of the volume by

Japanese fish biologists and their collaborators cover a wide variety of topics on fish biology. These include papers on evolution, genetics, systematics, reproductive biology, early life history, life history, variation, behavior, physiology, ecology, and zoogeography. These papers address fishes from lentic, lotic, and marine ecosystems in Japan, Asia, Africa, North America, and in some cases worldwide. One of Hiroya Kawanabe's most brilliant and lasting contributions was to foster collaboration between Japanese ecologists and other scientists.

The Fisheries Forecasting System in Japan for Coastal Pelagic Fish I.

Yamanaka, 1988-01-01. The fisheries forecasting system currently employed in Japan has been reviewed from both a technical and administrative point of view. The methodology, technology, data, information, and data processing employed, the result and benefits derived, have been discussed and appraised in some detail. The system's contribution to the total Japanese fisheries production and the socio-economic benefits to the nation have also been discussed. The linkage between forecasting and the fisheries management scheme employed in Japan has been examined. Finally, a review of general requirements for and guidelines on the establishment of a fisheries forecasting system in other countries have been given.

The Crisis of Food Brands Martin K. Hingley, 2016-03-16. Food and agribusiness is one of the fastest changing global markets, change that is driven by technology developments in manufacturing and supply and a growing consumer engagement. The success of the agri-food industry and many of our household brand names will depend on how much you understand about these changes and the extent to which you can deliver secure and competitive products in the face of growing expectations about food safety and quality, as well as changing attitudes about the environment, human diet and nutrition, and animal welfare. The Crisis of Food Brands offers perspectives on many key aspects of these changes, including the role of business policy makers and the media in communicating with and engaging stakeholders about relevant and dynamic models of risk and crisis management, the value of innovative and sometimes controversial food systems, their buying behaviour and attitudes to movements such as organic and fair trade, how and where we source and buy our food now and in the future. The quality of the original research that underpins this book and the imagination and practicality with which the authors address its applications for the industry is first rate. Anyone with responsibility for marketing food, communicating about the food industry, or engaging with consumers will find this an important source of ideas and inspiration.

All the Fish in the Sea Carmel Finley, 2011-08-22. Between 1949 and 1955, the State Department pushed for an international fisheries policy grounded in maximum sustainable yield (MSY). The concept is based on a confidence that scientists can predict theoretically the largest catch that can be taken from a species stock over an indefinite period. And while it was modified in 1996 with passage of the Sustainable Fisheries Act, MSY is still at the heart of modern American fisheries management. As fish populations continue to crash, however, it is clear that MSY is itself not sustainable. Indeed, the concept has been widely criticized by scientists for ignoring several key factors in fisheries management and has led to the devastating collapse of many fisheries. Carmel Finley reveals that the fallibility of MSY lies at its very inception as a tool of

government rather than science The foundational doctrine of MSY emerged at a time when the US government was using science to promote and transfer Western knowledge and technology and to ensure that American ships and planes would have free passage through the world's seas and skies Finley charts the history of US fisheries science using MSY as her focus and in particular its application to halibut tuna and salmon fisheries Fish populations the world over are threatened and All the Fish in the Sea helps to sound warnings of the effect of any management policies divested from science itself **The**
