

History of Archaeology

TIMELINE

Archaeology was not born overnight. Its history lies even deeper than the origin of the term archaeology. It gradually emerged over thousands of years in several phases. In each phase, archaeology was shaped into a new form and finally into the archaeology we have today. There are five phases in the history of archaeology.

THE BACKGROUND ERA

This era marked the desire for the past of humankind and the physical remains found in its surroundings. Curiosity for the physical remains that existed in the surroundings that were not created by themselves was the driving force behind the the creation of folk tales associated with those material remains.

THE RENAISSANCE ERA

In this era (1400s–1600s AD), the desire for material remains left that from the past, grew rapidly. The term antiquities came in to refer to the material remains left from the past, and they were considered pieces of art rather than evidence of the past. Inorganized diggings happened to take possession of antiquities.

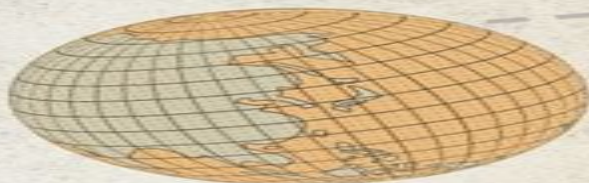

THE 18TH CENTURY

Antiquarian societies emerged, reviving the study of the past through material remains. Pompeii's 1748 excavation revealed that digging the earth could reveal not only antiquities but also human life from the past.

THE 19TH CENTURY

Archaeology emerged as a discipline in this era on the foundation laid by the Renaissance, alongside other fields. Systematic excavation methods were introduced, and new discoveries and theories from geology and chemistry shaped archaeology, resulting in a multidisciplinary approach.

THE 20TH CENTURY

This era saw significant theoretical development and reforms in archaeology, with methods and practices evolving alongside new theories. Technology was widely used, and warfare and development projects impacted archaeology. Rescue and underwater archaeology emerged, while postprocessual archaeology studied past human behavior and cognition alongside culture.
