The Solar House Daniel D. Chiras, 2002-10-01 Passive solar heating and passive

cooling approaches known as natural conditioning provide comfort throughout the year by reducing or eliminating the need for fossil fuel. Yet while heat from sunlight and ventilation from breezes is free for the taking, few modern architects or builders really understand the principles involved. Now Dan Chiras, author of the popular book *The Natural House*, brings those principles up to date for a new generation of solar enthusiasts. The techniques required to heat and cool a building passively have been used for thousands of years. Early societies such as the Native American Anasazis and the ancient Greeks perfected designs that effectively exploited these natural processes. The Greeks considered anyone who didn't use passive solar to heat a home to be a barbarian. In the United States, passive solar architecture experienced a major resurgence of interest in the 1970s in response to crippling oil embargoes. With grand enthusiasm but with scant knowledge and sometimes little common sense, architects and builders created a wide variety of solar homes. Some worked pretty well but looked more like laboratories than houses. Others performed poorly, overheating in the summer because of excessive or misplaced windows and skylights and growing chilly in the colder months because of insufficient thermal mass and insulation and poor siting. In *The Solar House*, Dan Chiras sets the record straight on the vast potential for passive heating and cooling. Acknowledging the good intentions of misguided solar designers in the past, he highlights certain egregious and entirely avoidable errors. More importantly, Chiras explains in methodical detail how today's home builders can succeed with solar designs. Now that energy efficiency measures including higher levels of insulation and multi-layered glazing have become standard, it is easier than ever before to create a comfortable and affordable passive solar house that will provide year-round comfort in any climate. Moreover, since modern building materials and airtight construction methods sometimes result in air quality and even toxicity problems, Chiras explains state-of-the-art ventilation and filtering techniques that complement the ancient solar strategies of thermal mass and daylighting. Chiras also explains the new diagnostic aids available in printed worksheet or software formats, allowing readers to generate their own design schemes. **Army Reserve Magazine**, 1978

Our Family Frank Lagonigro, 2022-08-01 In this his first novel, Frank Lagonigro describes the events and history of his family from his date of birth in 1928 through the Great Depression, the terrible wars, the brief interval of peace under President Dwight D. Eisenhower, and the years that followed until the present time. Living in Brooklyn, New York, during the Great Depression was a distressing and an unforgettable experience for our parents. Most children didn't realize the gravity of the era until they read about it in their history books. It was an age before many of the modern amenities such as indoor bathrooms, heating systems, air conditioning, television, elevators, computers, and other modern-day conveniences. In New York City, the Big Apple, the chief modes of transportation were trolley cars, buses, subway trains, and elevated trains. For a five-cent fare and a two-cent pass, a person could travel through the entire city from borough to borough using one or several means of travel. The fare on the Staten Island Ferry was a nickel. Mailing a first-class letter required a three-cent stamp, and homes received mail deliveries each morning and afternoon. Bleacher seats at the three baseball stadiums sold for fifty-five cents.
